T-Struts may be attached to side walls with 2-way adjustable brackets or with plastic inserts and screws.

BR16 KIT

Consists of 6 brackets and nuts for attaching T-Struts to side walls.

NT6-3 SCREW/INSERT KIT (Pkg. 24)

Includes 24 plastic inserts which slip into T-Strut end slot and engage No. 6 screws supplied as part of kit.

CARD GUIDES

Aluminum, zinc or plastic card guides, 3/8" wide, are supplied drilled and with mounting hardware. Funnel entry in plastic or aluminum as indicated.

MULTI-PURPOSE CAGE KITS

For those applications where pre-assembled units lack the versatility needed due to special size requirements, etc., multi-purpose kits are available. These adjust to all card, module or receptacle size within range. Kits are supplied unassembled and have all required assembly hardware. Major parts include 2 aluminum flanged side walls formed and slotted for standard rack mounting, 6 extruded aluminum T-struts (cross members) with mounting brackets and printed scale marking plus large assortment of required and extra screws, nuts and lock washers. Card guides can be ordered from table below. Special features of these kits are: slotted side walls for maximum mounting versatility--bracket mounting for all cross members (T-struts) for forward-backward positioning.

NIM BINS AND MODULES

Vector NIM (Nuclear Instrument Module) bins and modules have been designed to meet specifications of the NIM packaging system. Bins are 8¾"high x 19"wide x 10½"deep and have module guides installed to take standard NIM modules on multiples of 1.35". NIM connectors **or virtually any other flanged connector can readily be mounted on the adjustable bracket mounted cross members(T-struts) at the rear.** Bin standard finish is clear anodized, with iridite available to order.

NIM Modules are 8.70"high x 9.66"long and supplied in widths of 1.33", 2.68" and 4.04". Sliding side covers are standard. "C" types have slotted top and bottom rails with 0.075"wide grooves spaced 0.150" apart for mounting circuit boards where required. "P" types have flat perforated top and bottom rails for ventilation. All models have standard punched back plates for NIM connectors, but unpunched back plates for user punching are available. Standard finish is clear anodized, with iridite available to order.

NIM Bin CN87A	8¾"Hx19"Wx10½"D, without receptacles.

CCM-14A

Universal Card Mount Module System

This unit was inspired by the NIM cage design. It is significantly lower priced and differs substantially in that cards mount to "L"shaped aluminum plates. The module cage is 5¼"Hx19"Wx8.9"D and is supplied completely assembled, except for receptacles and modules, with guides installed at 1" intervals. Sixteen 1" wide card mount modules or a lesser number of any other width or combination of widths totaling 16" of face width may be installed. Almost any P.C. connector may be mounted without hole drilling on the two adjustable rear bracket mounted cross members (T-struts) which are preloaded with 16 pairs of 4/40 nuts.

Module Card Mounts are designed for circuit cards 4½" max. width by 6½" long and have face panel widths of 1", 2", 3" and 4". They consist of brushed anodized aluminum front panel plates with jack screws and brackets for attachment to card mounting plates, which have drilled holes and hardware for mounting circuit cards.

CCM-14A	Fully assembled Cage, except receptacles & modules. For 4½"x6½"cards. Includes front & side plates, mounting hardware for cards.
CM45-65-1	1" wide Front Panel
CM45-65-2	2" wide Front Panel
CM45-65-3	3" wide Front Panel
CM45-65-4	4" wide Front Panel

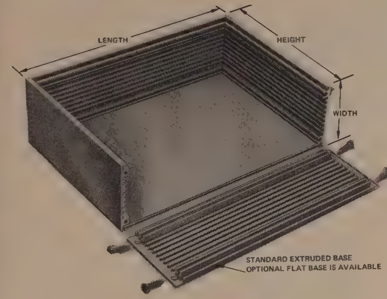
Vector INSTRUMENT CASES & PLUG-INS



MULTI-MOD CASES

Multi-Mod cases offer the user the classic simplicity of extruded aluminum formed into an instrument or component case having both strength and functional beauty. Available in a wide variety of sizes, finishes and colors, all models have a series of interior longitudinal grooves which hold circuit boards, mounting plates, and the sliding side covers which provide easy interior access. Removal of only four screws permits removal of the base plate, sliding side covers, and interior circuit card(s). Decorative extruded aluminum bezels are available for an even more finished front panel appearance. Special sizes and finishes are available to order--write factory.

BRUSHED CLEAR ANODIZED FINISH -- COMPLETELY ASSEMBLED

Optional panel bezels and tilt-up pedestal may be ordered separately.

PLUG-IN CASES For Building Modular Plug-In Circuits

ROUND CASES listed consist of a mica filled phenolic tube base type plug, either standard 7-pin miniature, 9-pin noval, or 8- or 11-pin octal type, and cover. Some listed models have interior wiring structures for mounting components. Covers, except where noted, attach with furnished screws. Other sizes and "specials" to order – write factory.

Base Plug Type	Part No.	Dia.	Lgth.*	Furnished Internal Structure

G2.2-8-4

TUBE BASE PLUGS

Mica filled phenolic or white glass filled polyimide material for building miniature plug-in units. Plugs match standard tube base sockets and have tinned phosphor bronze pins for soldering components on upper end. Flange on plug body serves as "stop" and bonding point for covers if used. Pins on plug-in side are 17/64" long. Models with recessed knurled nuts are available – write factory.

TURRETS

Post and Socket Types

Compact wiring structures are ideal for mounting discrete components on minimum chassis space. Socket type has ½" dia. phenolic post attached to socket, and one or two rings of tinned lugs for soldering components. Post type mounts with 6-32 screw into recessed knurl nut inside turret, or with protruding 6-32 screw. Many other sizes and types available -- write factory.

PRINTED CIRCUIT BOARD
CARD EJECTORS

PACKAGING PROGRESS
BY Bivar

CARD O PULL T.M.

- Protect components, circuitry, connectors, PCB's and system from excessive stress damage.
- Designed for both 1/16" and 3/32" PCB's. Can be used in most systems.
- Aids insertion and extraction of PCB's — eliminates extraction tools.
- Available in locking versions.
- Available from stock.

PC CARD EJECTORS provide safe and easy lever action for extraction and insertion of 1/16" and 3/32" PCBs. Available from stock in 8 standard styles and 2 locking versions for positive retention, CARD-O-PULLs are molded from natural white Nylon per MIL-M-20693 can be supplied in 12 additional colors with hot stamped markings for permanent identification on a custom basis.

MATERIAL: Natural White Nylon per MIL-M-20693A, Type 4A 3/32" dia. x 1/4" long Spring Pins (furnished with each ejector.)

TOLERANCES: ±.005" per Inch.

ECON-O-GIDE®

SNAP-IN CARD GUIDES

- Rigid reinforced nylon
- 24 Standard lengths, 2½" thru 14" in ½" increments
- Fast, easy installation
- Economical

SNAP-IN CARD GUIDES, available from stock in 24 Standard Lengths, ECON-O-GIDEs provide a wide choice to meet your most challenging design needs. Molded from Reinforced Nylon for strength and rigidity, these inexpensive guides snap into sheet metal with minimum effort and maximum retention. Samples are immediately available upon your request.

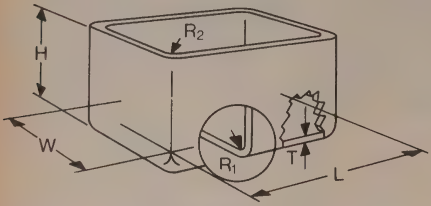
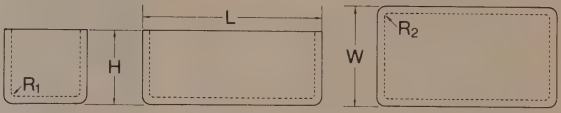
Zero Deep Drawn Aluminum Boxes

ZERO offers 40,000 **standard** deep drawn sizes in rounds, rectangles and squares, available for off-the-shelf delivery in two weeks, A.R.O. This is only a small sample of our standards which can be readily modified for special applications.

ZERO rectangular standard boxes are produced from ZERO-METHOD deep draw tooling that insures close tolerances and a wrinkle-free finish. Available in any height between maximum and minimum shown.

Key to drawing





Note: W and L ARE MEASURED AT POINTS OF TANGENCY. WIDTH, LENGTH AND HEIGHT ARE ALL OUTSIDE DIMENSIONS

W	Width measured at tangency between bottom radius (R_1) and side
L	Length measured at tangency between bottom radius (R_1) and side
H	Height
T	Normal blank thickness (gauge) prior to drawing
R_1	Radius at bottom
R_2	Radius of side (on rectangular boxes and covers)

When ordering give part number and height desired in 1/16's.

EXAMPLE: Z48-80A-48 = A BOX 3″ W. X 5″ L. X 3″ H

Maximum and minimum heights only are listed. Boxes are available in any height to nearest 1/16ths. Decimal or finer fractional heights on special order only.

Thicknesses shown (T) are nominal blank thicknesses prior to drawing. Actual wall thickness is normally 80% or more of nominal blank thickness, but is dependent on depth of draw, number of draws and net blank thickness (a variable within mill tolerances).

Aluminum Association alloy designation and gauge thickness are used throughout this catalog.

ZERO CENTURION® "ELITE" CARRYING CASES

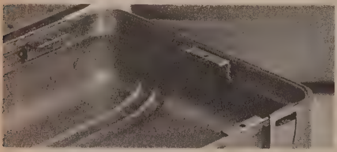
Top-of-the-line protection and appearance for your finest equipment

High strength, light weight and clean simple lines characterize these distinctive cases. Surfaces are seamless and wrinkle-free while satin buffing and anodizing, standard finish for the line, make the most of aluminum's natural good looks.

Zero Centurion cases are dust-proof, weather resistant and odor-proof; and their strength and durability have been proven in actual use around the world. Each is strong enough to stand on, thanks to specially heat treated case shells; yet even the largest (26 x 18 x 9) weighs less than 10 pounds.

NEW FEATURES

Zero has improved the appearance, reliability and versatility of this line. New positive locking latches improve working performance, while adding to the clean styling of each case.



A new, fully gasketed tongue-and-groove closure extrusion, bonded to case shells, offers not only better sealing and better case integrity, but also permits the installation of new adjustable panel mounting brackets (optional) at significant savings over other methods of attaching angles for panel mounting equipment.

DELIVERY

Normal delivery for standard cases and panel mounting brackets is one week after receipt of your order and will be filled from the Zero facility nearest your location. Allow 4 week delivery for cases with foam packs.

100X SERIES

A new standard of excellence

The 100X Series comes completely equipped, ready for installation of your equipment. Available in 13 standard sizes, the dimensions and weights for this line are shown in Table 1.

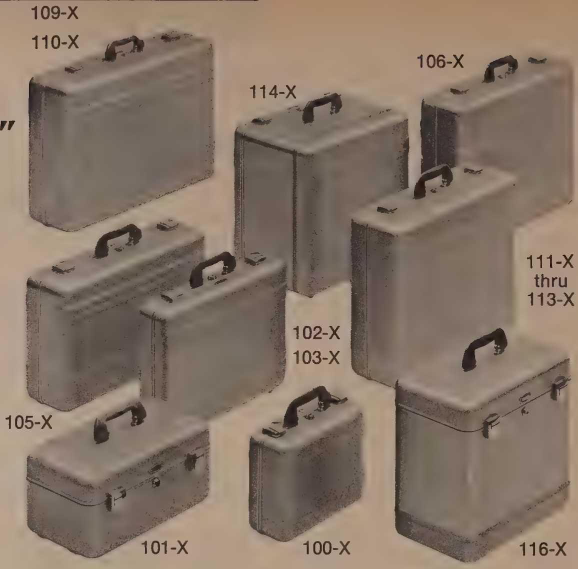


Table 1 Standard Zero Centurion Cases

Model	Width	Length	Height	Height Upper Shell	Height Lower Shell	Material Thickness	Net Weight
100-X	9	12	5	2	3	.040	2 lbs. 7 oz.
101-X	9	16	7¾	2½	5¼	.051	4 lbs. 7 oz.
102-X	13	18	4½	2	2½	.040	4 lbs. 1 oz.
103-X	13	18	6	2½	3½	.040	4 lbs. 4 oz.
105-X	13	21	6½	2¾	3¾	.040	5 lbs. 1 oz.
106-X	17	21	7½	3	4½	.051	7 lbs. 4 oz.
109-X	18	26	8½	3¾	4¾	.051	9 lbs. 9 oz.
110-X	18	26	9	4¼	4¾	.051	9 lbs. 13 oz.
111-X	18	24	7	3	4	.051	8 lbs. 15 oz.
112-X	18	24	8	3½	4½	.051	9 lbs. 6 oz.
113-X	18	24	8½	4	4½	.051	9 lbs. 8 oz.
114-X	17	18	12	2	10	.040	7 lbs. 14 oz.
116-X	9	16	14½	2½	12	.051	5 lbs. 10 oz.

Note: Width and length are outside dimensions; height is an inside dimension.
Lower shell of Model 114-X and 116-X complete with spot welded wrap-around riser section.

ORDERING INFORMATION

(for Standard 100X cases)

Simply order by part number, indicating quantity. If panel support brackets are required, add suffix P and indicate quantity per case.

SAMPLE PART NUMBER

103X - P6

Case Number

Panel Mtg. Brackets and Quantity/Case

Standard foam packs are also available in 2 pound density blue polyurethane, and can be obtained by adding suffix F to case numbers (Example: 103X F). Allow 4 weeks for delivery.

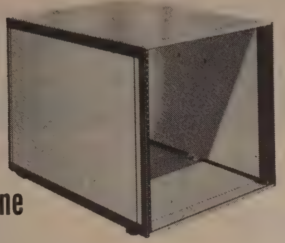
VIP the ZERO versatile instrument packaging system



the vip series 19 line

The VIP Cabinet Line provides an attractive alternative to conventional electronic rack mounts, accepting EIA standard 19″ panels totaling 5¼″ to 28″ height (see table). In addition, multiple VIP Series 19 modules can be stacked vertically for temporary instrument groupings, thanks to a positive-nesting foot design. Individual units may be fitted with tilt stands, chassis slides, fold-away cast handles, or (for the 5¼″ unit only) a self-retracting strap handle. And the VIP Series 19 Line standard units come pre-assembled with or without front and/or rear panels, as you require. The VIP Series 19 Line has removable top and bottom panels.

ORDERING INFORMATION

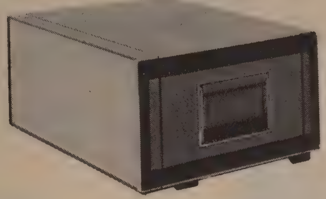
Notes: [1] 3½″ and 5¼″ high units employ dual self-retracting strap handles; 7″ high and over employ fold-away cast handles for 2-man carry. [2] 2-Week delivery. [3] 4-Week delivery. [4] See Zero Catalog P for separable, non-separable and rotational slides, with capacities to 275 lb./pair. [5] Front and rear panels are alodined without color finish to permit secondary operations. [6] Front and rear covers are identical. For one, designate "C"; for two, designate "CC." [7] For special requirements, consult the nearest Zero sales office.

the vip 6-way line



The VIP 6-Way Line, as its name suggests, is more versatile still. The "6-Way" nomenclature derives from this family of features: (1) Vertical Nesting via positive-nesting feet, for temporary groupings; (2) Vertical Interlocking via dove-tail stack-joiner strips and integral grooves, equivalent to rack mounting in less space and without the rack and its limitations; (3) Horizontal Interlocking via dove-tail strips and grooves, for side-by-side mounting of multiple instruments; (4) Rack Mounted via accessory brackets, plus optional chassis or rotation slides, for insertion into the VIP Cabinet units or other EIA Std. racks; (5) Briefcase Portable via cast fold-away handles or self-retracting strap handle, plus optional front/rear dust covers; and (6) Tiltable via an accessory tilt stand, for bench and desk-top use without parallax. It is this extraordinary versatility and the strength of castings, extrusions and heavy-gage aluminum that makes the VIP enclosures worthy of your designs. The VIP 6-Way Line has the unique feature of removable top and bottom panels.

VIP 6-Way standard modules come unassembled in both 17″ and 8½″ outside widths, and are designed for interlocking without gaining width.

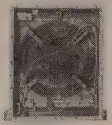
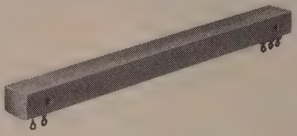
DELAY LINES

WITH OR WITHOUT CIRCUITRY

MAGNETOSTRICTIVE ★ LUMPED CONSTANT ★ ULTRASONIC ★ DISTRIBUTED CONSTANT ★ DISPERSIVE STRIP

MAGNETOSTRICTIVE DELAY LINES — Fixed and variable delays to 10,000 microseconds. Fixed — FMS Series; Variable — VM Series.

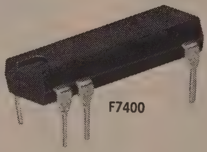




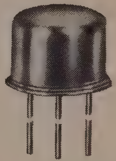
FIXED MAGNETOSTRICTIVE DELAY LINE — Up to 10,000 bits of data for memory storage. Circuitry compatible with all microcircuit logic. Choice of data format: RZ, NRZ or Bipolar.

ULTRASONIC DELAY LINES — Replaces most quartz or glass lines. Offers superior performance, lower attenuation and smaller size at less cost. Frequencies to 30 MHz. Delays to 200 usec and greater.

SUBMINIATURE DELAY LINES



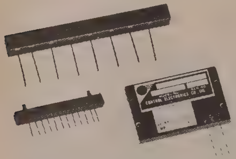
F7400



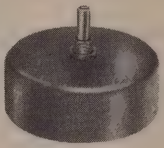
F-TO-5

TO-5 and micrologic packaged delay lines from 0.01 to 0.64 and longer delays. Ideal for timing transistors and other circuit components.

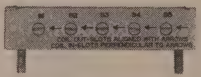
LUMPED CONSTANT DELAY LINES — Many shapes available including miniature types with pin connectors for PC Boards, connector fingers for plug-in units...multi-tapped units...terminal-ended units, etc. Delays from 0.05 usec to 500 usec for standard units. Delay to risetime ratios up to 100:1. Temperature stability to 50 ppm/C°.



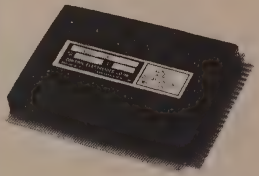
COMPACT FIXED DELAY LINES FOR PC BOARDS — Extremely high density packaging. Typical Unit: 25:1 delay-to-rise-time ratio in a volume of 2 cubic inches.



VARIABLE DELAY LINE Resolution of 1 part in 120. Delay up to 10 usec. 1″ x 3″.

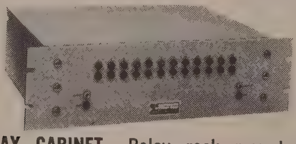


UNIQUE BINARY CODED SECTIONAL DELAY LINE — Uses miniature transfer switches. Also available with terminals for remote switching.



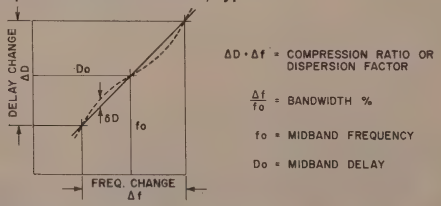
IFF MULTI-TAP DELAY LINES Standard IFF delay lines with taps every 1.45 usec. High density packaging available for airborne transponder use.

AUDIO, HIGH FREQUENCY & DISTRIBUTED CONSTANT DELAY LINES — With unusual circuits, extreme delays, high frequency application, rapid rise times, conforming waveform circuits and corrective circuits. Write for complete details.



AUDIO DELAY CABINET — Relay rack mounted cabinet houses 25 millisecond delay with taps at every ms. Units can be cascaded for longer delays.

DISPERSIVE STRIP DELAY LINES — Delay varies with frequency. A prime application is in Pulse Compression Radar Systems, eliminating large, expensive filter components. Compression ratios of 150:1, typical.



For all your Delay Line requirements, contact:

CONTROL ELECTRONICS COMPANY, INC.
153 Florida Street, Farmingdale, L.I., N.Y. 11735 • (516) 694-0125

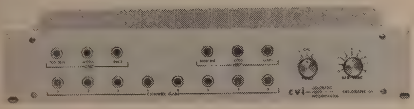
cvi COLORADO VIDEO INCORPORATED • P.O. BOX 928 • BOULDER, COLORADO 80302 • U.S.A.
PHONE (303) 444-3972
TWX 910-940-3248 (COLO VIDEO BDR)

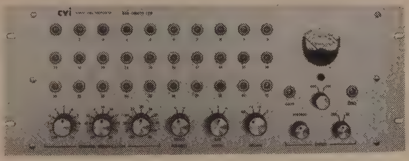
Bar Graph **101**



A device accepting 8 negative going signal inputs and converting these into a vertical "Bar" pattern as seen on the screen of a standard TV monitor. Requires external sync. Rack mount, 3½" high, solid state.

$1250.

Bar Graph **120**



Accepts 30 negative going input signals and produces a horizontal bar display with better than 1% accuracy. Has individual channel markers, zero suppression, decade expansion, and other features. Requires external sync. Rack mount, 7" high, solid state.

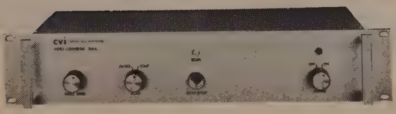
$4200.

Limit Indicator **122**

A device producing 15 separate "high" and 15 separate "low" vertical markers with automatic alarm when video falls outside of predetermined limits. Requires external sync. Rack mount, 5¼" high, solid state.

$3500.

Video Converter **201-A**



A unit which accepts a standard "real time" television input signal and uses high speed sampling to produce a "slow-scan TV" output signal for computer data reduction or other forms of video processing. Conversion accuracy is excellent, with negligible grey scale distortion. Rack mount, 3½" high, solid state.

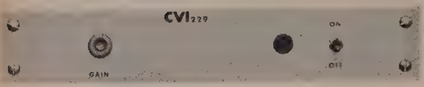
$1950.

Video Converter **220-A**

Companion unit to the 201-A. Utilizes a magnetic disc memory together with high speed pulse circuits to convert "slow-scan" video or properly formated computer data to standard 525 line TV rates. Has automatic erase and indefinite image storage capabilities. Options include color reproduction and selective record/erase. Rack mount, 7" high, solid state circuitry.

$5000.

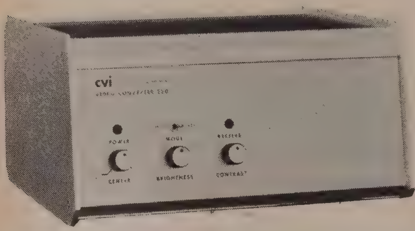
cvi COLORADO VIDEO INCORPORATED • P.O. BOX 928 • BOULDER, COLORADO 80302 • PHONE (303) 444-3972



Video Compressor 229

A low cost version of the Model 201A. Output bandwidth is approximately 8 kHz. Either rack mount or table top package. Size 10 x 7 x 1¾″; solid state.

$1000.

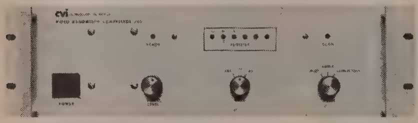


Video Expander 230

A compact version of the 220A, utilizing an 8″ magnetic disc memory. Recommended for lower resolution applications such as signature verification or remote scene monitoring. Size 12½ x 11½ x 6¼″. Table top mounting.

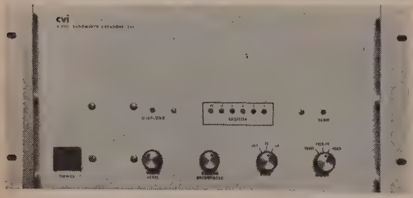
$3000.

Video Compressor 260



This unit accepts standard composite video signals and performs sampling, digitizing, buffering, and slow scan TV conversion operations. Provides outputs for computer use and for direct connection of slow scan signals to voice grade communications circuits. Rack mount, 5¼″ high; solid state.

$3000.



Video Expander 261

A companion device for the 260. Accepts slow scan TV signals and converts to standard TV rates. Uses magnetic disc memory for non-fading image display. Rack mount, 8¾″ high; solid state.

$6000.

Video Digitizer 270

An advanced version of the 260 which provides for directly computer addressable sampling. The 270 allows both computer input of video signals and the redisplay of computer processed information on a standard television monitor by means of photographic time exposures. Various options are available. Rack mount, 5¼″ high; solid state card file construction.

$4000.

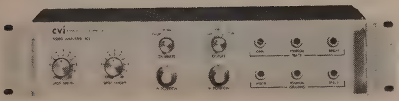
cvi COLORADO VIDEO INCORPORATED • P.O. BOX 928 • BOULDER, COLORADO 80302 • PHONE (303) 444-3972

Video Analyser 301

An instrument displaying "vertically line-selected" TV waveforms directly on the screen of a normal TV monitor. 1/1 waveform/picture ratio simplifies identification of individual picture elements. Display also includes an electronic reference grating and H and V markers. Requires external sync. Rack mount, 3½" high; solid state.

$875.

Video Analyser 302



Similar to Model 321, but does not have internal time base or field selection. However, the unit incorporates variable H and V sample widths. Requires external drive pulses. Rack mount, 3½" high; solid state.

$1950.

Sync Stripper 302-2

A utility unit producing sync, horizontal drive, vertical drive, and blanking signals from a standard composite video source. Allows interconnection and synchronization of video devices to camera or tape recorded signals. Size 3 x 5 x 7"; solid state; self powered.

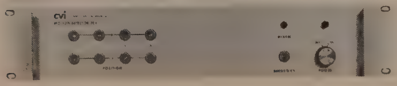
$250.

Raster Generator 302-5

A device containing circuitry to generate very low speed rasters, up to one half hour in duration. Intended for use in recording sampled video information or other low frequency signals in conjunction with a conventional X-Y plotter. Produces pseudo topographical type displays with information vertically deflecting raster lines. Rack mount, 3½" high; solid state.

$950.

Motion Detector 304

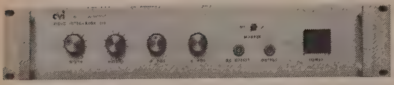


A device sampling four independent points in a TV scene and producing an alarm when a change in brightness occurs at any of the sampling points. Operates with standard, composite, video signals. Rack mount, 3½" high, solid state.

$1250.

cvi COLORADO VIDEO INCORPORATED • P.O. BOX 928 • BOULDER, COLORADO 80302 • PHONE (303) 444-3972

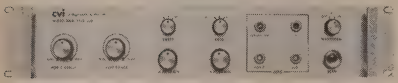
Video Integrator **310**



An instrument producing a D.C. voltage directly proportional to the integral of a video signal falling within a selectable "window" area. Requires external drives. Rack mount, 3½" high; solid state.

$1500.

Video Analyser **321**



Laboratory version of the 301. Incorporates additional circuitry to allow chart recording of "line selected video waveforms, X-Y coordinate indication, noise analysis, computer data input, and other features. Requires external sync. Rack mount, 3½" high, solid state.

$2500.

Video Analyser **350**

A low cost instrument for display of TV waveforms directly on a normal monitor screen, eliminating the need for a separate CRT display. Similar to the Model 301 but uses fixed sampling and also features a peak video level detection mode. Rack mount, 1¾" high; solid state.

$400.

Video Plotter **401-A**

An instrument which converts low frequency data to video format with indefinite signal storage via a wide band magnetic disc memory. Features include internal time base, electronic reference grating, multimode recording, grey scale reproduction, and selective erase. Generates own sync. Rack mount, 7" high, solid state circuitry.

$4000.

Video Converter **404B**

A wide band magnetic disc recorder accepting properly formatted computer output signals for conversion to standard 525 line TV rates. Incorporates four separate read/write/erase channels for generation of multiple displays or synthetic color. Also produces H and V timing pulses for synchronization of auxiliary equipment. Rack mount, 8¾" high, solid state circuitry.

$7000.

cvi COLORADO VIDEO INCORPORATED • P.O. BOX 928 • BOULDER, COLORADO 80302 • PHONE (303) 444-3972

Video Converter 404D

A four-channel magnetic disc recorder directly computer addressable for the reconstruction of images in black and white or color TV format.

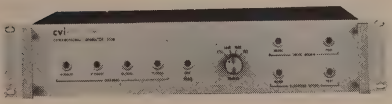
Rack mount, 8¾″ high; solid state card file circuitry.

$7000.

Data Camera 502

A TV camera intended particularly for research or industrial inspection uses. Accepts nearly any 1 inch tube and has various features such as externally controllable sweeps, beam blanking, dynamic gain control, plug-in low pass filters, and very wide range of operating rates. Options include video sampler, shading generator, and digital control of various functions. Camera is three chassis configuration: head, control unit, power supply. Requires external drives, blanking, or deflection voltages.

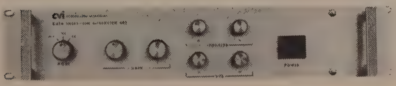
$4000.



Sync Generator 601-B

A unit intended for laboratory use when either standard or nonstandard TV scan rates are required. Uses micrologic binary counters with adjustable feedback paths. Drive and blanking pulses are variable width, but sync is not EIA format. Incorporates dot/bar generator for test purposes. Rack mount, 3½″ high, solid state.

$1025.



Data Insertion Generator 603

Combines the functions of a 2 channel video mixer, special effects generator, and video pointer. Moveable oblong is positionable to any point in TV raster and is variable in size over a wide range. Oblong acts as the internal "key" in special effects mode, and also generates a white "box" outline or solid square for marking purposes. Requires external sync. Rack mount, 3½″ high, solid state.

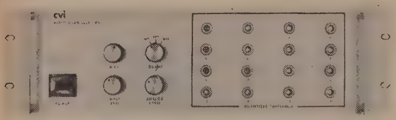
$1250.

Video Processor 604

An instrument modifying the grey scale of a video input signal by selecting and amplifying a variable width "slice". Also incorporates variable brightness control, sync adding, and external marker adding functions. Requires external sync. Rack mount, 3½″ high; solid state.

$950.

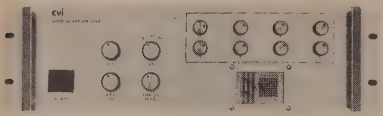
cvi COLORADO VIDEO INCORPORATED • P.O. BOX 928 • BOULDER, COLORADO 80302 • PHONE (303) 444-3972



Video Quantizer 606

A device which allows the processing of a video input signal into 16 separate amplitude levels. Operates with tape, camera, or disc inputs and allows radical grey scale alterations or the generation of complex synthetic color signals. Rack mount, 5¼" high, solid state.

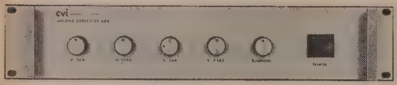
$3500.



Video Quantizer 606A

An eight-channel version of the 606, containing a built-in color coding patch panel and mixing functions. Produces R-G-B outputs and sync. Rack mount, 5¼" high; solid state.

$2500.



Shading Generator 608

Generates H and V sawtooth and parabolic waveforms of variable amplitude and polarity to provide compensation of brightness errors in video input signals. May also be used to drive external dynamic correction circuitry. Requires external sync. Rack mount, 3½" high; solid state.

$950.

Video Pointer 610C

Generates five different oblong and/or cross patterns which are positionable to any location on the TV screen. Oblongs can be changed in size over a range of 10 to 1. Unit may be used for marking purposes or for positional measurements. Requires external drives. Rack mount, 3½" high; solid state.

$1950.

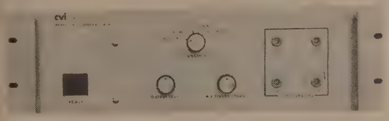
Diameter Analyser 611

This device contains gating, slicing, and counting circuits to provide automatic measurement of the maximum vertical dimension of a target with moderate to high contrast. Both digital and analog output signals are available. Requires external sync. Rack mount, 3½" high; solid state.

$1950.

cvi COLORADO VIDEO INCORPORATED • P.O. BOX 928 • BOULDER, COLORADO 80302 • PHONE (303) 444-3972

Video Generator 615



A test instrument providing grey scale, grating, dot, window, multiburst, and flat field signals. Multiburst is variable in position for monitor resolution checks, and multiburst frequencies to 20 MHz may be ordered. Requires external drive, blanking, and sync. Rack mount, 5¼" high; solid state.

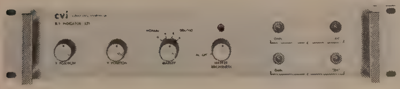
$2000.

X-Y Indicator 620

Generates white cross hairs superimposed over a video input signal. Allows rapid alignment of subject material with a predetermined location when used in conjunction with a standard TV camera and monitor. Accepts composite video on a terminated input and provides composite video out to a standard TV monitor. Size 11 x 8 x 1.65". Mounting: Free standing or rack. Self powered.

$400.

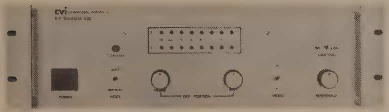
X-Y Indicator 621



An instrument accepting either composite or non-composite video signals and superimposing either a small white dot or set of cross hairs on the video image. Marker may be manually positioned to any location on the raster and two directly proportional DC output signals are generated for analysis of spatial location of subjects. Also contains built-in grating generator for evaluation of input signal quality. Rack mount, 3½" high; solid state.

$1500.

X-Y Digitizer 622



This unit provides 8 bit digital X-Y coordinates of a small white dot that may be manually located anywhere on a standard TV image. Also incorporates automatic tracking of high contrast targets, and stable grating test signal. Operates from composite video. Rack mount, 5¼" high; solid state.

$4500.

Video Detector 630

Provides gating functions combined with high and low video detection circuitry to provide automatic warning when video levels exceed preset limits. May also be operated in a differential mode to provide high sensitivity to small changes in contrast, such as might be produced by spots or hairline cracks. Operates from composite video signals. Standard rack mount, 3½" high; solid state.

$1500.

CVI COLORADO VIDEO INCORPORATED • P.O. BOX 928 • BOULDER, COLORADO 80302 • PHONE (303) 444-3972

A few words about Colorado Video, Incorporated.

CVI specializes in the design and manufacture of instruments utilizing video technology. Particular areas of interest include research laboratory instrumentation, industrial inspection and control, computer input/output of television signals, video metrology, image alteration and synthesis, electronic art, scan conversion, and communications involving the transmission of TV pictures over audio grade circuits.

Colorado Video, Incorporated—3245 Prairie Avenue, Boulder, Colorado USA

CVI instruments are used throughout the world and are available for operation from 50 to 400 Hertz power sources and at various scanning rates. For technical assistance, please contact any of the following:

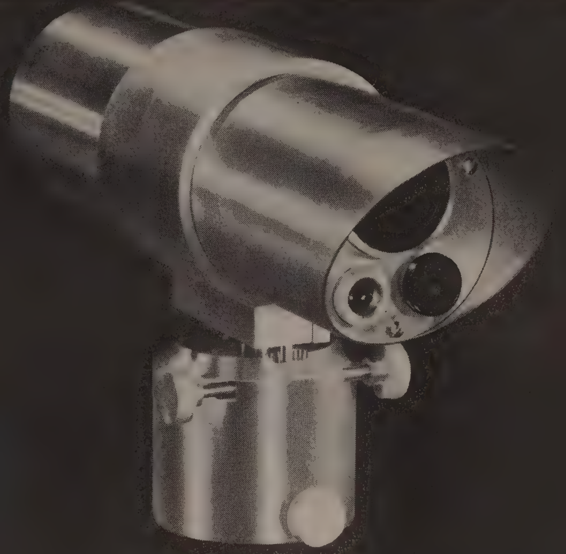
CVI VIDEO INSTRUMENTS FOR DATA ACQUISITION — PROCESSING — DISPLAY — TRANSMISSION

Laser Communicator

MODEL LC-10



Features

No FCC license required. Single, weather-proof ("O" ring sealed) housing for transmitter, receiver, alignment scope and power supply. Low cost, half the price of a microwave link. One and ten line private telephone models. Data rates of 10K, 100K and 1M bits/second. Range greater than 15 miles. Repeater capability for extended range. Superior security, virtually untappable. Precision pan and tilt base for easy installation. Internal batteries available for portable operation.

Application

Secure high-speed data communications.
High security private telephone.
Telemetry.

Power Technology Inc.

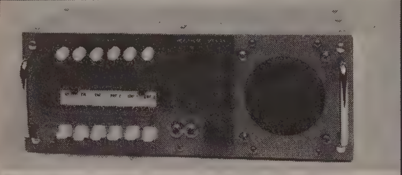
Loudspeaker-Amplifier Panels Single (SLP-4 shown) and dual units available with common or independent AC/DC Integral Power Supplies, or DC inputs. 5-1/4" H X 19" W X 6 " D

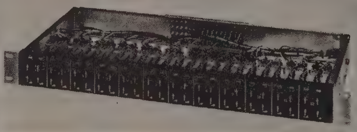


Air Traffic Control Tower Systems•Complete solid state Airport Tower units • FAA, Navy and Air Force approved • Models for 12 VDC, 24 VDC and 48 VDC power • Amplifiers for Tx and Rx circuits.

BURLINGTON COUN
N4845

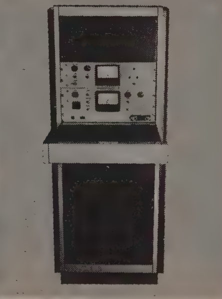
Mobile Air Traffic Control System AN/MRC-131 • Completely self contained • Provides 1 HF, 2 VHF, 2 UHF, 1 FM channels • Three operator positions • Power from motor alternator, 12 V DC battery, and 110/230 VAC rectifier charger • All frequencies in HF, VHF and UHF Air/Ground bands.

Patch and Test Bays Primary (cable), equal level Circuit and DC Patch Bays complete and ready for installation at site. Also, Patch, Test, Fuse and Distribution bays.

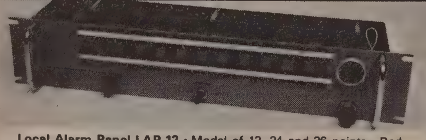


Variable Attenuator Panel - VAP-1230 Provides 12 channels of switchable attenuation from 0 to 30 DB in 2 DB steps, 600 OHMS input and output. 1-3/4" H X 19" W X 9" D. Other impedance and attenuation steps available.

Voice Orderwire Unit TTP-12 • Provides selection 12 channels • Supplied with telephone handset • Adjustable Tx and Rx levels.



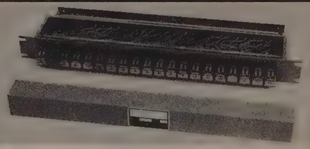
Magnet Charger Model 3 LV • High power for industrial users • 11000 watt seconds peak energy • Automatic 10 operations per minute • Available with Monitor Unit • Variable charging voltage 0-500 volts • Model 1 LV also available.



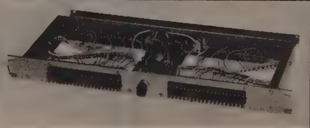
Local Alarm Panel LAP-12 • Model of 12, 24 and 36 points • Red lamp and audible alarm • 110 VAC, 48 VDC and 24 VDC optional power • Solid state construction.

Audio and Digital Patch Panels Miniature and standard telephone jacks in various configurations for telecommunications and computer patch and test facilities available in 2, 4 and 6 wire circuitry for audio; cut key and/or activity indicators for digital.

Supervisory Control, Alarm Systems • Custom designed to your requirements • Up to 256 points control and alarm • Excellent security Double scan with Parity • Computer control and logging available • Single master-multiple remotes • Fully solid state IC construction.



Relay Panel - RP-Y-20 20 Plug in relays in 1-3/4" of panel space for various applications in communications and control field. A wide variety of voltage and contact arrangements available.



Fuse and Alarm Panel 40 fuses in 1-3/4" H. Panel with visual alarm and contact outputs for remoting alarm. FP-40A for 6, 48, 60-80, 120-130 VDC. F P-40B for 6, 12, 24 and 48 VDC applications.

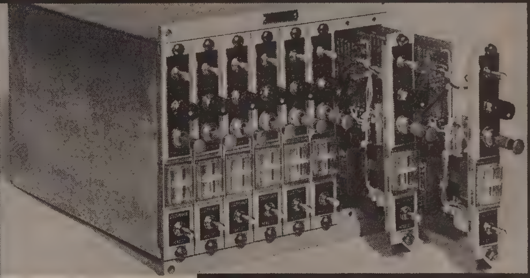
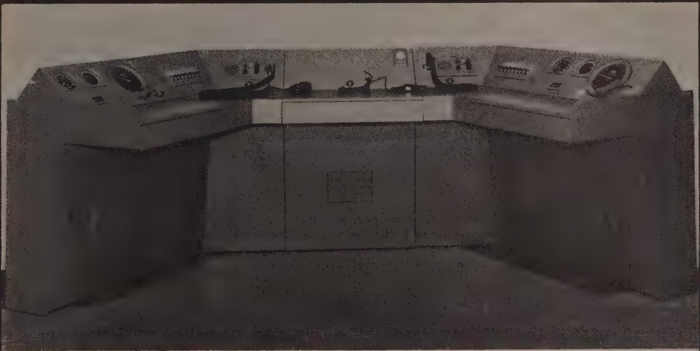
Air Traffic Radio Channel Control Systems 12 VDC, 24 VDC and 48 VDC,—12 and 24 VDC systems include (shown left to right): Jack Unit—audio unit; w/plug-in microphone amplifier/lamp brightner, recorder monitor, and speaker-headphone amplifier modules, — selector unit w/plug-in selector modules — multipin patch panel extender module (foreground). Flight service station selectors, power supply assemblies and supporting test set also shown on this page.

Power Supply Assemblies: Standard models include 12 VDC, 24 VDC and 48 VDC outputs with input @ 115 VAC 50-60 H_z single phase. (Other in/outputs available on request.)

Module Test Sets designed to facilitate organization, direct and depot maintenance levels. The test set provides in/output signals and measurements required to access module performance, used with 12 and 24V radio channel control equipment.



Flight Service Station Selectors provides standard radio channel control functions plus muting and individual volume control features with emergency and locking select and key switch.



Complete Communications Consoles designed to customer specifications, including: air traffic control — flight service stations — police, fire and maintenance dispatcher positions.

Four and Six Channel Main-Standby Transformer Control and Relay Panels — six channel control panel CP-600 shown. Other basic models include RP-600, SSP-400, and RTP-400. These units available in 12, 24 and 48 VDC.

Microphone, Line, Speaker and Mixing Amplifier Assemblies, regulating and non-regulating (6 channel regulating amplifier — AA-6/600B shown)

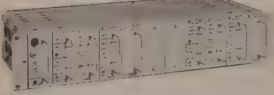
Additional Systems and Equipment:
- Voice frequency signaling and control system (RCAG)
- Voice frequency signaling system (VOR/VORTAC)
- Receiver selector XFMR
- Receiver muting XFMR
- Receiver selector/mixing XFMR
- Radio headset panel
- Receiver selector, 4 channel
- Receiver volume control panel
- Receiver muting panel

G.R.M. CORPORATION - COMPLETE MANUFACTURING SERVICES FOR OEM PROPRIETARY PRODUCTS

COMMUNICATIONS DIVISION RFL Since 1922

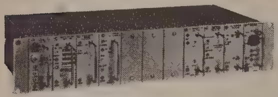
Transmission Terminals For Data, Control, Telephone, Telegraph and Telemetering Applications

AM and FS Voice



The 2056 or 6850 Series single-package design accommodates all tone-channel requirements for any telemetry, control, and telegraphy applications. It permits intermixing AM and FS channels in various combinations of both types of receiver and transmitter. It is available in bandwidths for various speeds of operation. CCITT and Western Electric spacings are also available as standard. Basic modules are common to all applications, with accessory modules providing for special system requirements. All are solid-state, plug-in modules interconnected at the rear of the prewired mounting shelf.

Analog Telemeter



The Model 2203 Variable Frequency Telemeter System operates on an audio FS carrier, modulated at a sub-audio rate of 10 to 30 Hz or by polar current pulsed at 10 to 30 Hz. The modulation frequency is directly proportional to the EMF transmitted and represents the full-scale span of the measured quantity. Received signals are demodulated, and the output voltage or current, which is proportional to the modulated signal, drives potentiometer recorders and DC milliammeters.

Lower frequencies for narrowband transmission and other ranges can be supplied. Any DC input-voltage range of 20mV to 1000mV is standard. Modules for slide-wire operation and for higher input voltages are also available. Output-current span is 2mA standard into 2500 ohms maximum for modulation frequency variation. Outputs up to 50 mA can also be supplied. Accuracies of 1% are guaranteed with a linearity of 0.1%.

The Model 6405 Series High Accuracy Variable Frequency Analog Telemeter System operates at unprecedented accuracies and stability. Typical accuracies, spanning 10 to 30Hz, −2.5 to 0 to +2.5V at 25°C, are 0.02% full span for the transmitter; 0.02% full scale for the receiver. Long-term drift, in six months after 100 hours initial operation, is 0.1% full span for the transmitter; 0.25% full scale for the receiver.

DC voltages or currents are converted into squarewave, sub-audio frequencies for FSK transmission over wire-line, radio-microwave, or carrier-telephone facilities. Interface compatibility covers positive neutral, HTL, CMOS, EIA, DTL/TTL, negative neutral, and dry contact. Squarewaves are reconverted into proportional DC voltages or currents to drive such devices as recorders, indicators, and analog-to-digital converters.

Frequencies may be specified from 5 to 40Hz, calibrated linearly with input voltage requirements between 10mV and 10V.

Data

There is a complete line of RFL Data Modems with rates up to 2400 bps. The modems are usable for all computer, data terminal, and time-sharing operations. Bell compatible modems are available.

Modems for either direct-hardware or acoustical coupling provide interfaces for TTY Models 28, 33, or 35, and operate over two-wire circuits such as a DDD network; or over four-wire circuits such as leased dedicated lines. PC card modems are compact, Originate-Only or Answer-Only units for OEM applications. They operate full duplex and are strappable for half-duplex operation. Digital interfaces for EIA, CCITT, TTL, DTL, and teletype are available.

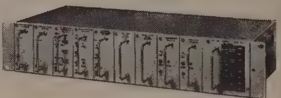
The 6850 Series Voice Frequency Carrier Telegraph (VFCT) provides for a wide variety of data transmission requirements including telegraph, data, speech-plus-data, supervisory control, and alarm. Versatility in chassis arrangement allows for 19-inch rack mounting, single-channel enclosure, or multiple chassis arrangements of twenty-four or more channels; flexibility in digital interfaces provides for either neutral or polar telegraph loops, low-level polar (EIA/CCITT) positive or negative logic, TTL, DTL or CMOS digital interfaces.

Digital Telemeter System

The Model 6291 Digital Telemetry System uses digital logic to monitor and telemeter any information on system status or environmental conditions that can be transduced electrically. It continuously senses, measures, and displays up to eight channels of data on each of up to 19 remote stations, alarming when any parameters are out of preset limits. All remote stations are selectively monitored through one master station, without a computer, by only one operator in attendance. Accuracy of measurement is better than ½% with 3 digit readout.

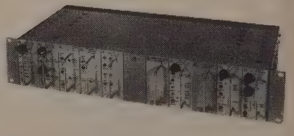
The master repeats all alarms automatically and all displays at command. Readouts are sequential, concurrent, and identical in three digits of applicable units for pinpoint isolation, rapid diagnosis, and immediate correction of all undesirable conditions.

SSB Voice



The Model 2710 SSB Terminal provides single-sideband transmission of voice and data in microwave, static and power line, and radio baseband applications. Two basic configurations are available: 14 channels in the spectrum of 4-60Hz; 12 channels in the spectrum of 60-108Hz. Channels up to 300 kHz are available by dual translation. Channels may be applied singly or in groups without common equipment. Terminals are easy to maintain, with front-panel test points and controls for monitoring and servicing. Complete power line systems including trap coupling capacitors and telephone exchanges can be provided.

Protective Relaying



The Model 3253 Protective Relaying uses audio FS tones to transmit two-function information, trip and guard. Security against false trips is assured through surveillance circuits in the receive channel, which continuously monitors the receive amplifier. Drops greater than 6dB in either signal level cause the circuit to clamp the receive channel in guard position. Similarly, other circuitry clamps the channel in guard if noise levels in a frequency band increase above a preset level.

The Model 6745 Protective Relaying System offers top performance at two-for-one cost through unique design of dual, FS tone channels. Crystal-controlled oscillators with tracking bandpass filters assure stability with minimum time delay, pure sine-wave, continuous-phase outputs. Redundancy and logic circuitry provide security against false trips due to high noise and single component failures.

Self-contained high-pass filters prevent 50-60Hz currents induced on a phone line from overloading system circuits. A signal of −30dBm remains undistorted and unsuppressed even with 40 volts of 60Hz power induced on the line. Advanced design provides dynamic range of 20dB; in-band noise detection; trip-up/trip-down frequency-shift coding; guard-before-trip logic; trip-hold timer; optically isolated transistor-trip input and output; and only three controls to adjust. Trip boost of 10dB is available through strapping options where lines permit.

A COMPLETE LINE OF COMPONENTS FOR DATA COMMUNICATIONS SYSTEMS

LINE CONDITIONING & INTERFACE DEVICES

- **C-303** • Dual strappable 0 to 31.75 DB 600 ohm pads
- **C-311** • 600 ohm in/out 30 DB data grade line amplifier
- **C-312** • 2W, 600/10K input speaker amplifier
- **C-314-XX** • Balanced & isolated summing amplifier up to 10 ports
- **C-315-XX** • Balanced & isolated distribution amplifier up to 10 ports

ALARMS — TELETYPE & CARRIER FAULT

- **C-351** • 45 to 200 Baud distortion/open line alarm
- **C-353** • Dual carrier detector/alarm
- **C-354** • Hi/Lo carrier alarm, detects out of tolerance data levels

INTERFACE

- **C-362** • EIA to TTY convertor 20 or 60 ma, two to four wire option
- **C-366** • Neutral to polar, polar to neutral convertor
- **C-368** • Automatic loop current regulator 20ma polar nominal
- **C-369** • Automatic loop current regulator 60ma nominal

CONTROLS & SIGNALLING

- **C-324** • Touch Tone® receiver
- **C-325** • BCD—dial pulse convertor
- **C-370** • Remote supervisory indicator

TELETYPE

- **C-403** • Keyboard programmable automatic answer back
- **C-411** • Regenerative selector magnet driver
- **C-414** • Xtal controlled regenerator
- **C-420** • Hubbing repeater, universal
- **C-431** • Repretory dialer
- **C-440** • Selective calling unit
- **C-470** • Universal bridging monitor interface

COMPUTER INTERFACE

- **C-181** • IBM Selectric interface

TEST EQUIPMENT & SYSTEMS

- **C-391A** • Test message generator
- **C-395** • Line monitor driver (ASCII to Hex translator

SOLID STATE SYNCHRO/RESOLVER CONVERTERS

	Input Availability	Output	Static Accuracy	Size
TRACKING SYNCHRO/RESOLVER TO DIGITAL. Series 1651: Miniaturized, fully isolated unit tracks 1440°/Second.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	14 bits binary parallel TTL, DTL compatible.	±4′	3.125″ x 2.625″ x 0.82″
14 BIT SYNCHRO/RESOLVER TO DIGITAL. Series 1623E: Includes ±5° offset capability. Miniaturized, solid state unit that converts synchro or resolver inputs into binary, BCD or **Both**. Can accept FLUX VALVE inputs.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	14 bit parallel binary 4 decade BCD, or **Both**. TTL, DTL compatible.	±4′	3.125″ x 2.625″ x 0.82″
ANGLE POSITION INDICATOR, SOLID STATE. Series 2623: Includes ±5° offset capability. Rugged, compact, accurate and economical. Adj. brightness, BDC output available at connector. With or without built-in power supplies. Internal reference available.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	Readout 359.9, ± 179.9 or 9999. Others available 4 decade BCD avail. at rear connector.	±0.1°	5.5″ x 1.75″ x 5.5″ deep
SYNCHRO/RESOLVER TO LINEAR DC. Series E678-1637: Converts all standard synchro or resolver inputs to linear DC output proportional to the angle. Switching point is non-ambiguous. All models are short circuit proof.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	**E678:** ±10VDC for angles −180° to +180° **1637:** ±10VDC for angles −89.5° to +89.5°. Other formats available.	6′, 15′, 30′ or 1°	**E678:** 3.625″ x 3.06″ x 0.82″ **1637:** 2.53″ x 3.22″ x 0.82″
SYNCHRO/RESOLVER TO SINE-COSINE DC. Series 655/697: Generates sine and cosine DC outputs proportional to the angle.	Freq.: 60 or 400Hz L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 to 115	−10 volts to +10VDC, representing the sine and cosine of the input angle.	±6′	**400Hz:** 1.85″ x .85″ x .82″ **60Hz:** 3.1″ x 1.5″ x .98″
SYNCHRO/RESOLVER TO SINE-COSINE DC (non-variant). Series 655NV: Generates sine and cosine DC outputs proportional to the input angle. Insensitive to synchro reference and line voltage variations.	Freq.: 60 or 400Hz L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 or 115	−10 volts to +10VDC, representing the sine and cosine of the input angle.	±6′	3.44″ x 3.19″ x 0.82″
SYNCHRO TO SINE/COSINE DIGITAL. Series 655 NVD:	Freq.: 60 or 400Hz L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 or 115	14 lines sine and cosine plus quadrant signs.	5′	PC: 4.5″ x 8″ x 1″
SINE-COSINE TO SYNCHRO DRIVERS. Series B676: Solid state device designed to handle large current surges of TR's. Will drive three 11TR4s to a low null. Overload and short circuit protected.	±10VDC, representing the sine and cosine of the required angle.	L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 or 115 Freq.: 60Hz or 400Hz	±10′	P.C. 4.5″ x 8.0″ x 1″
LINEAR DC TO SINE-COSINE DC. Series C670: Converts a D.C. voltage, representing an angle, into two output voltages that are proportional to the sine and cosine of that angle.	±10VDC representing angles from −180° to +180°.	K sin θ and K cos θ K = 10VDC	±10′	3.44″ x 3.19″ x 0.82″
COORDINATE ROTATOR. Series A689: Accepts rectangular inputs (X and Y) and rotates these coordinates through an angle that is proportional to a linear DC input.	$X = R\cos\theta$ $Y = R\sin\theta$ R = ±20 MV to ±10 VDC	$R\sin(\theta+\beta)$ $R\cos(\theta+\beta)$	±10′	3.19″ x 3.44″ x 0.82″
POLAR TO RECTANGULAR. Series A1618: Converts polar coordinates (R, θ) into rectangular (X, Y).	R: ±10VDC θ: ±10VDC	$X = R\cos\theta$ $Y = R\sin\theta$ R = ±20 MV to ±10VDC	±10′	3.19″ x 3.44″ x 0.82″
RECTANGULAR TO POLAR. Series 695: Converts rectangular coordinates (X, Y) into polar (R, θ). Switching point is non-ambiguous.	$X = R\cos\theta$ $Y = R\sin\theta$	$R = \sqrt{X^2 + Y^2}$ $\theta = \tan^{-1}\frac{Y}{X}$	±10′	3.19″ x 3.44″ x 1.78″
DIGITAL-TO-SYNCHRO/RESOLVER. Series 1673: Miniaturized, 2 watts, short circuit proof output.	14 bits parallel, positive Logic, TTL levels binary coded angle.	Synchro or Resolver Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref.: V_{RMS}: 10 to 115	±4′	3.125″ x 2.625″ x 0.82″
DIGITAL TO SYNCHRO/RESOLVER. Series A1670: High power, solid state device converts a 14 bit digital input into either a 3 wire synchro or 4 wire resolver output. Overload and short circuit protected.	14 bit input representing angles from 0 to 360°.	L-L V_{RMS}: 11.8 or 90 Ref. V_{RMS}: 26 or 115 Freq.: 60Hz or 400Hz	±4′	P.C. 4.5″ x 8″ x 1.0″
ACP TO SINE/COSINE DC (non-variant). Series ACP:	4096 ACP & 1 ARP	±10VDC, representing the sine and cosine of the input angle.	±5′	PC: 4.5″ x 8″ x 1″
DIGITAL TO SINE COSINE DIGITAL. Series 1500:	14 lines representing angles 0 to 360°.	12 bits sine and cosine, also quadrant sign.	±2′	3.0″ x 4″ x 0.4″
DIGITAL TO SINE COSINE DC (non-variant). Series 1501:	14 lines representing angles 0 to 360°.	±10VDC, representing the sine and cosine of the input angle.	±2′ or ±10′	3.125″ x 2.625″ x 0.82″
CONTROL TRANSFORMER, SOLID STATE. Series 1682: Fully transformer isolated unit.	Synchro and 14 bits Natural parallel binary.	±5 volts AC ±12.5°	±4′	3.125″ x 2.625″ x 0.82″
CONTROL DIFFERENTIAL TRANSMITTER, SOLID STATE. Series 1681:	Synchro and 14 bit Natural parallel binary.	6.5 V_{RMS} Sine/Cosine	±4′	3.125″ x 2.625″ x 0.82″
MULTIPLEXED SYNCHRO-TO-DIGITAL. Series MUX: Simple, noise immune, small and inexpensive Modular system, up to 128 channels.	Any combination of Synchros and Resolvers.	14 bits binary parallel 70 μs conversion.	±4′	3.125″ x 2.625″ x 0.82″ + 1.85″ x 0.85″ x 0.82″ per channel
TWO SPEED SYNCHRO-TO-DIGITAL. Accepts either binary or nonbinary gear Ratios from a two speed synchro system.	Freq.: 50Hz to 10KHz L-L V_{RMS}: 5 to 90 Ref. V_{RMS}: 10 to 115	Up to 19 bits binary parallel.		3.125″ x 2.625″ x 0.82″
COMPUTING DEMODULATORS. Series 840, 854: Fully isolated. Proportional phase-sensitive bipolar output.	840: 0 to 5V_{RMS} 854: 0 to 20 V_{RMS} Freq.: 400Hz or 60Hz	0 to ±4.3VDC 0 to ±10VDC	0.1% 0.1%	**840:** 1.63″ x 1.0″ x 1.0″ **854:** 1.63″ x 1.0″ x 1.0″
COMPUTING MODULATORS. Series 1102MP4: Converts DC to proportional Sine wave AC.	±10VDC	0 to 6V_{RMS}	0.1%	2.28″ x 2.03″ x 0.78″

Other frequencies and voltages available. Units available for either 0 to +70°C or −55°C to +85°C operation. Most units are hermetically sealed for extra protection.

TRANSMAGNETICS INC
MODEL- C670

C670 SOLID STATE COMPUTING MODULES

FEATURES:

- No calibration, adjustments or warmup.
- Ultra reliable.
- Infinite resolution.
- Factory repairable, hermetically sealed for total protection.
- Designed for P.C. board mounting.
- All models are short circuit proof.
- Meets MIL-STD-202C.

SOLID STATE ANGLE POSITION INDICATORS

FEATURES:

- ±0.1° accuracy, total worst case error.
- 2.5 msec. step response for 360° change.
- 120° distortion and glare-free viewing.
- LED or Incandescent readouts.
- Direct Sunlight viewable.
- Readouts replaceable from front.
- Front panel lamp test.
- Only 1¾"H X 5½"W panel space.
- One piece mounting.
- No calibration, adjustments or warmup.
- Internal reference available.
- Leading zero blanking.
- Display dimming.
- Rugged Military Style Connector.
- Humidity proof models available.

SERIES A1670 HIGH POWER DIGITAL TO SYNCHRO/RESOLVER CONVERTERS

FEATURES:

- No external buffers or amplifiers required.
- Capable of driving at least three 11TR4a.
- High accuracy and resolution.
- Short circuit proof output.
- DTL and TTL compatible.
- Low output impedance.
- DC isolated synchros.
- No customer adjustments required.
- Code "M" units meet MIL-STD-202C.

TRANSMAGNETICS

COMPLETE SUBSYSTEM CAPABILITY:

Transmagnetics is well equipped to supply completely wire, rack mounted subsystems that include the D/S converters, power supplies, multiplexing control circuits and other customer specified components.

FREQMETERS, DISCRIMINATORS, PHASEMETERS

Solid state frequency-to-dc converters and discriminators will linearly convert frequency or repetition rate of signals to a proportional dc output. Waveforms can be sine, square, sawtooth or triangular. Standard models are available to cover a wide range from zero to 300 kcps. Expanded scale, differential frequency, under/over frequency and phase detectors are available (meter, meter relay and relay types are also available).

Only the Models 400 to 440 Freqmeters are basic f-dc converters, the output being proportional to the product of frequency and peak input voltage. The 410KF to 440KF are solely frequency dependent (independent of peak input voltage). 450KF to 480KF units require lower drive (millivolts). Series 200VFV are precision F-V or V-F converters.

The 486E is an expanded scale Freqmeter while the 491ME is a mirrored-scale visual panel meter version. The 411 and 421 units are difference Freqmeters. The 401 series FM discriminators are for IRIG channel telemetering. The 471 is a Hi-Lo pass frequency sensitive relay suitable for under/over frequency and speed detection and control.

The 791 Phasemeter is a phase-to-voltage converter. These units have been designed for applications where stability, ruggedness, long life, efficiency and freedom from maintenance are prime requisites. Miniature, stable and rugged designs make these units ideal for military, aerospace, industrial and portable applications. The 801 provides an output frequency that is the absolute difference between 2 input frequencies.

OSCILLATORS, CONVERTERS, SIGNAL ISOLATORS RELAYS, CHOPPERS, TRANSDUCERS, SUPPLIES

Solid state oscillators and converters are available in many types (MIL-SPEC too). The S-310 is tuneable. Series 300VF Voltage-to-Frequency converters change analog signals to frequency and are matched to our Series 400KF Freqmeters. Series 200VFV are precision F-V or V-F converters. The V-511, MV-515 (20 millivolt input) Voltage Controlled Oscillators (VCO) are designed for IRIG FM telemetering. The V-521 is a micro-version of the V-511 (without bandpass filter). The PCXO-116 is crystal controlled and programmable to 13 frequencies. Use the MA531 to mix several VCO channels. The DCI-177 isolates DC signals eliminating grounding and supply isolation problems with common mode signal rejection.

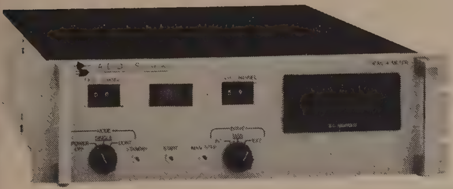
ANALOG DIGITAL DATA SYSTEMS, INC.

830 LINDEN AVENUE • ROCHESTER, N. Y. 14625 • PHONE 716 - 381-2370

DATA ACQUISITION SYSTEMS

DATALOGGING SYSTEMS FROM STOCK UNITS. ASSEMBLED TO CUSTOM REQUIREMENTS

The Dataloggers accept multiple analog signals, from physical transducers, such as thermocouples, strain gauges, and similar devices. These are scanned by a multiplexer and programmer, individually conditioned to the appropriate voltage level; digitized, converted to computer compatible format and recorded.



SERIES 13 SCAN-A-METER

An economical approach to the measurement of Analog Data for either display or Datalogging. Its modular design gives a large number of options for different types of inputs, expansion channels, and output devices.

SERIES M

This datalogger is available with either 10, 100 or 1000 channel multiplexer capability, digitizing and recording in computer compatible magnetic tape. The tape format can be either straight binary or binary coded decimal, 7 or 9 tracks and 200, 556 or 800 b.p.i. The system speed can be from manual push button to 1000 characters/second asychronous or up to 5000 characters/second in the slew mode.

SERIES P

This datalogger is available as the above, but the output is recorded in computer compatible paper tape, such as ASC11. The system speed is 20 characters/second as standard and up to 130 characters/second as options.

SERIES T

This datalogger is available as the above, but with teletype output. The teletype gives both punched paper tape output in the ASC11 code and also a line printer. The teletype includes a keyboard for manual input data and can be used for computer input. Speed is controlled by the teletype at 10 characters/second.

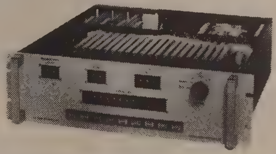
SERIES K

This datalogger is available as above, but with output onto magnetic tape cassettes. The format is compatible with teletype and the cassettes can be read out onto teletype machine or over a datalink to a shared time computer.

MULTIPLEXERS - SERIES - 012

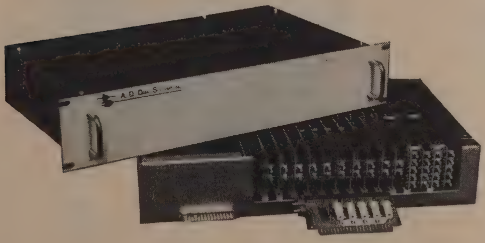
Both reed relay scanners and FET multiplexers from 10 channels to 1000 channels are available as standard. Using a unique modular design, the multiplexers can be built up from a wide range of modules to give 1, 2, 3 or 4 wire switching. Features include low thermal switching, high common mode rejection, switched guard, flying capacitor filtering, and programming.

UNIVERSAL CONTROLLER COUPLERS



These units have been designed to control the overall system and also to serialize parallel data into computer compatible format. The Coupler has plug-in modules to drive output devices such as punched card, paper tape, magnetic tape, teletype and computers. It is also pin board programmable for control functions and computer format, and front panel controls for word length, record length, recycle point and cycle time.

REED RELAY MATRICES



REED RELAY MATRICES

For switching multiple path signals, using reed relays for signal switching and TTL compatible logic for controls.

Each path can be selected in nanoseconds from X, Y and select pulses which latch the control logic and the reed relay switch.

The switched path simulates a 50 ohm impedance coaxial line, terminated in 50 ohm connectors to give minimum signal distortion and crosstalk at frequencies exceeding 10 MHz.

Options include electrical readout of crosspoint selected.

TYPICAL APPLICATIONS

Controlled switching in automatic testing of integrated circuits, printed circuit modules, logic modules.

Routing of R.F. signals, telemetry signals.

Programming video signals.

Computer interface to automatic equipment.

Model 056-003 — 10 x 10 x 1 Matrix with Coax signal connectors.

Model 056-103 — 10 x 10 x 1 Matrix with Coax signal connectors and electrical readout of crosspoint selected.

Model 056-006 — 10 x 10 x 2 Matrix.

Model 056-106 — 10 x 10 x 2 Matrix with crosspoint readout.

Model 056-009 — 10 x 10 x 3 Matrix.

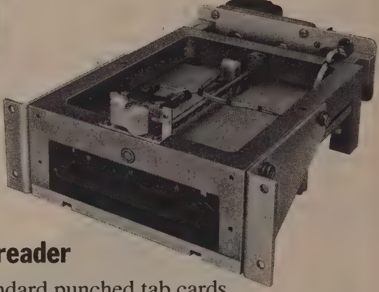
Model 056-109 — 10 x 10 x 3 Matrix with crosspoint readout.

Data entry. AMP fits the product

However you buy them—as complete, ready-to-use units or as individual components—our broad range of data entry products will give you the excellent performance and reliability for which AMP is noted. Typical applications include industrial control and automation, as well as information systems and remote data collection.

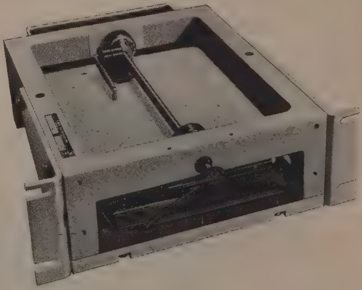
Low-profile magnetic card reader

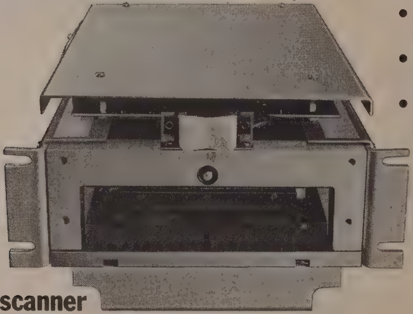
- Simple operation. Cards are inserted and retrieved from same slot.
- Reads ABA track Aiken data at 75 bits/inch.
- No motor required. Mechanical drive eliminates RF generation.
- Low profile. Suitable for use as a stand-alone accessory.
- TTL outputs are compatible with industry standards for design interface.



Tab-card reader

- Reads standard punched tab cards.
- Compact design allows positioning in small panel space.
- Available in bussed-column, matrix and diode-isolated specials.
- Wipe and back-wipe contact operation has high inherent reliability.
- Available in 80-column and 22-column versions—motorized and manually operated.

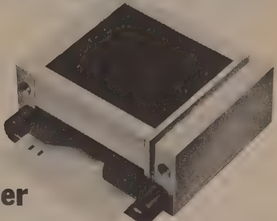




Card reader/scanner

- Senses all 960 hole positions of standard, 80-column card.
- Provides character serial, bit parallel data up to 2000 CPS.
- Offers outputs which are compatible with DTL and TTL.
- Integrated circuitry and solid-state components assure high reliability.
- Equipped with diode-isolated card reader and electronic scanner.

to your application.

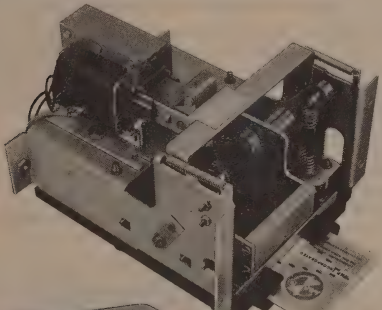


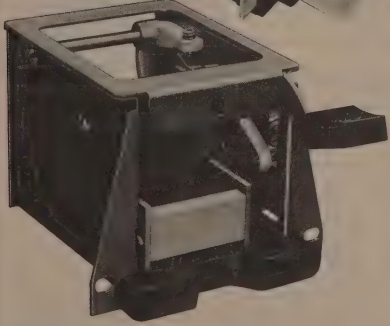
Credit and badge card reader

- Maximum reliability, with proven switch design and a minimum of moving parts.
- Compact, rugged construction. Only two major assemblies for long life in severe environments.
- Low-temperature operation. Suitable for outdoor use to −40° F.
- No external power required. Reader operates with card insertion.
- No maintenance required. Designed to operate throughout life without adjustment or preventive maintenance.

Credit card reader

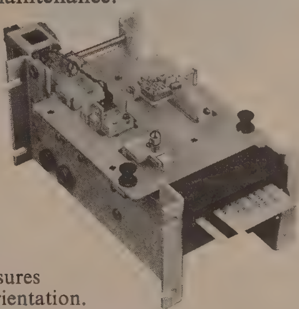
- Reads 15, 20 or 22-column cards.
- Solenoid powered or manually operated versions available.
- Cross matrix available for numeric data, matrix alpha numeric or telephone dial code.





Matrix badge reader

- Reads 10 columns of a 15-column badge; 15 columns of a 20-column badge; and 17 columns of a 22-column badge.
- Small size and low cost adapt to limited space and budget.
- Cross matrix available for numeric data, matrix alpha numeric or telephone dial code.



Magnetic card reader

- Slot design ensures proper card orientation.
- Reads and writes at 210 bits per inch, providing as many as 650 bits across the card.
- Available with dual read head for ABA and IATA tracks.
- Designed for convenient behind-panel mounting.
- Card is returned or captured at users option.

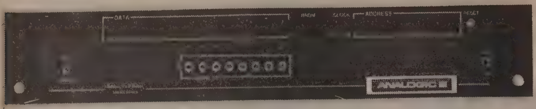
COMPLETE DATA ACQUISITION AND CONVERSION SYSTEMS

SERIES AN5400



DATA
ADDRESS
RESET
ANALOGIC

Introducing 12 Important User Features That Guarantee a Better Structured, Better Performing Overall System.

The AN5400 is a multi-channel, analog-to-digital/digital-to-analog data conversion system featuring the uncommon flexibility to handle intermixed high and low level signals — expanded to a virtually unlimited number of channels and providing a generous range of resolutions and speeds.

The system may be field expanded by simply inserting standard Analogic printed circuit cards into sockets provided on the motherboard — or even further by the addition of up to 16 expansion enclosures! The user may select and mix input cards providing *full scale* ranges from 10mVolts to 1000 Volts, or more, single-ended and differential input channels and filters or D/A converters.

Super-Versatile Connectivity

The AN5400 enclosure motherboard accepts up to 18 PC card subsystem modules that connect via rear card edge connectors with the outside world — 16 cards for input and output functions and 2 for computer interface. The motherboard also accepts up to 14 additional cards necessary for address control, functional control and the analog to digital conversion chain — signal conditioning, sample and hold and A/D conversion.

Design Advantages

1. Arbitrarily mixed input/output capabilities — one AN5400 system accommodates all data conversion requirements of a total system.
2. Digital I/O structure accommodates interfaces with all common computers via programmed I/O or DMA — optimized overall system efficiency.
3. True industrial low level capability — can meet NEMA 2500 volt fault protection standards.
4. Highest density — up to 512 A/D channels in a single 5¼" high enclosure.
5. Expansion to systems with up to 8192 channels.

Design Features

Compatibility

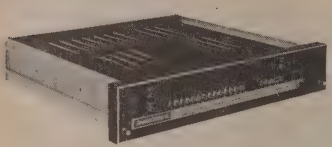
The system is designed to accommodate Analogic's full spectrum of conversion products — A/D's, D/A, Mux's, amplifiers, sample and holds.

Address and Control Structure

Independent address registers for input and output functions provide the capability for

- up to 8192 input channels
- up to 512 output channels
- "full duplex" operation of input and output functions simultaneously
- independent random or sequential operation of inputs and outputs
- selectable display of either address register.

SERIES AN5800



Completely self-contained, wide range of applications, low cost, and proven reliability.

The Series AN5800 family of low-cost modular systems is ideal for data conversion applications — from simple MUX/Buffer/ADC combinations to elaborate A/D-D/A interfaces under computer control. True plug-to-plug compatibility is provided for the standard minicomputer specified. A universal motherboard provides space and interwiring for all the variations and capacities implicit in the general system diagram shown below.

The performance of every AN5800 system is verified by a comprehensive set of computer-programmed test routines, in which every channel, range, level, and functional mode is exercised definitively — validating all key specifications, including accuracy, linearity, monotonicity, and noise. This test program makes it possible to guarantee system performance that is significantly better than that predictable by summing the uncertainties of the individual modules.

Selected Specifications

Converter resolution — from 8 to 15 bits
Throughput rates — to 200kHz
Differential Systems — CMR 86dB typical @ 60Hz
Crosstalk — 74 dB typical rejection at 1kHz under worse case excitation.
Sample and Hold Aperture plus delay — 40nsec max, ±10nsec uncertainty.

Standard Minicomputer Interfaces

The 5800 interfaces to most minicomputers by means of an interface control card and simple cable connections to a buffered I/O in the computer.

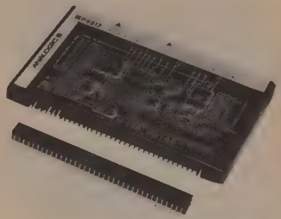
COMPLETE SUBMINIATURE HIGH SPEED DATA ACQUISITION SYSTEMS

SERIES MP6912



A SINGLE STANDARD PACKAGE— Offering Key Built-in Features that Make it a Genuinely Powerful Total System — So Small it Fits Where Others Won't.

For use within minicomputers and microprocessor systems, the Analogic MP6912 is the smallest, most versatile, completely self-contained modular 16 channel data acquisition system ever offered to the system designer. Despite its remarkably compact construction, this *plug-in*, PC card mountable system provides all the scanning, signal-conditioning, A/D conversion, and programming/control/timing circuitry required for multi-channel high-speed 12-bit data acquisition.

Outstanding Features

- Lowest powered — requires only 1.6 watts.
- Versatile — pin-selectable control of multiplex address mode, input configuration mode, conversion resolution and timing control.
- A completely integrated sub-system — more consistent, accurate, and dependable than assemblies of individual modules.
- Effective electrostatic and electromagnetic shielding, 6 sides, to minimize noise problems.
- Height only 0.375" — fits 0.5" spacing.
- Very high throughput rates — from 100,000 12-bit muxed, sampled conversions/sec to 480,000 single-channel 4-bit conversion/sec.
- Extreme flexibility of input/output/control/format.

Model	Throughput Speed*	S & H Aperture	Throughput Accuracy	Diff Amp CMRR	FS Ranges**
MP6912 — 100kHz	100kHz	<5 ns	Accuracy ±.025% FSR	70db	±10V, ±5V 0 to +10V
MP6912 — 60kHz	60kHz	<5 ns	Quantization Error ±½ LSB Range TC ±12 ppm/°C	DC to lkHz	0 to +5V ±10,24V, ±5.12V
MP6912 — 30kHz	30kHz	<10 ns	Offset TC ±10ppm		0 to 10.24V 0 to 5.12V

*Based on 12-bit resolution, random or sequential non-overlapped addressing.
**All range standard pin selectable.

The MP6912 Has Everything Your System Needs.

1. Built-in complete 12-bit high-speed successive-approximation A/D converter — excellent stability and linearity.
2. Built-in high-speed sample-hold — low aperture uncertainty, for precise sample timing, optimum accuracy.
3. Built-in premium reference with excitation current regulated.
4. Built-in fast, high stability differential buffer amplifier — high CMRR, high impedance for optimum signal conditioning.
5. Built-in digital-output buffer amplifiers-high fan-out, load-isolated, will drive cables.
6. Built-in 16 channel Multiplexer (optionally expandable) for both single-ended and differential inputs.
7. Built-in address register/control logic.
8. Repairable and field supportable.

EXPANSION MODULES TO INCREASE THE RANGE OF THE MP6912

MP6932 Multiplexer Expansion Module

MP6932
ANALOGIC

Contains 32 channels of single-ended or 16 channels of differential multiplexing — with all associated addressing and logic required for expansion. Up to 16 MP6932 modules can be sub-multiplexed into a single MP6912 system, providing 512 single-ended channels or 256 differential channels.

Selected Specifications

Input current (per channel)	<1 na @25°C: 20 na @60°C
Input impedance	>100 Megohms
Input capacitance	<10 pf for off channel <100pf for on channel exclusive of external capacitance.
Input fault current (power off or mux failure)	Internally limited to 20 ma
Channel to channel offset	<100 µv max. <10 µv typical
Multiplexer gain error	.003%
Multiplexer settling time	<3 µsec <8 µsec in conjunction with MP6912

MP6900 PG

Programmable Gain Amplifier/Auto Zero Amplifier

The MP6900PG provides gains of 1, 2, 4 and 8 — enabling the MP6912 to process signals with amplitudes as low as 1.25 volts full scale. This enhances the full 12-bit resolution capability of the A/D converter with 3 additional bits of dynamic range.

The auto zero feature of the MP6900PG automatically compensates for offsets in the programmable gain amplifier, sample and hold amplifier, and in the differential buffer amplifier of the MP6912.

Selected Specifications

Gain of 1, 2, 4 and 8 are programmed through two binary inputs.

Linearity	±.01%
Gain Accuracy	±.01%
Gain Temperature Coefficient	±5ppm/°C
Offset of Programmable Amplifier	adjustable to 0
Settling time at gain of 1 when connected as specified	5 µsec
Settling time at gain of 8	8 µsec
Allowable external load other than that required for the MP6912 system	2 ma

MP6932PG Multiplexer Expander/Programmable Gain Amplifier/Auto Zero Amplifier

The most comprehensive module in this family of products, the MP6932PG combines multiplexing expansion of 32 single-ended or 16 differential channels with the programmable gain amplifier and the auto zeroing features described above.

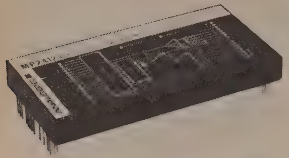
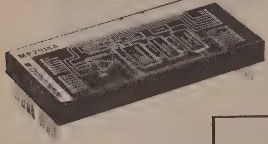
ANALOGIC®

SUCCESSIVE APPROXIMATION ANALOG-TO-DIGITAL CONVERTERS





DESIGNED FOR EXACT FIT WITH DEMANDING APPLICATIONS

Introduction

Successive approximation type A/D converters are specifically suited to high speed applications. These include multichannel data acquisition systems and conversion of signals with broad band frequency content. Resolutions are available from 8 to 16 binary bits with conversion times from as little as 2 microseconds for 8 bit conversions and 20 microseconds for 16 bit conversions . . . approximately 1000 times faster than integrating type A/D's with comparable resolutions.

Analogic successive approximation converters feature:

- electrical separation of digital and analog ground for minimization of ground loop-caused errors
- self-contained range and offset adjustments for stable system calibration
- adjustability of integral clock frequency and short cycle capability for best speed/accuracy trade-offs
- pin selectable full scale ranges and output code for versatility and simplicity of ordering and stocking
- built-in buffer amplifier options.

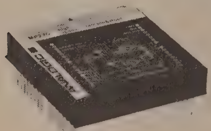
SAMPLE AND HOLD AMPLIFIERS



Features of the Series include:

- low aperture uncertainty
- extremely low feedthrough in the hold mode
- fast acquisition time
- proprietary signal guarded control circuitry to virtually eliminate self-modulation
- storage capacitors selected for minimum dielectric absorption.

Application/ Characteristics	TYPE	Acquisition Time (20V step)	Aperture Uncertainty	Hold Mode Feedthrough	Offset Stability (Hold Mode)

DUAL SLOPE INTEGRATING ANALOG TO DIGITAL CONVERTERS

A DIFFERENT APPROACH TO SOLVING NEW PROBLEMS

INTRODUCTION

Dual Slope Integrating A/D converters are particularly useful in low to moderate speed applications where moderate to high resolution, excellent differential linearity, inherent noise rejection and monotonicity are required.

A comparison

Dual Slope Integrating A/D converters are inherently lower in cost and more reliable than successive approximation converters of equal resolution and accuracy.

Functional Advantages Unique to Many Integrating A/D Converters:

- ☐ Extremely wide dynamic range ratiometric measurements.
- ☐ Total isolation between analog and digital sections.
- ☐ Built-in auto zero for negligible drift and no zero adjustment.
- ☐ Single polarity active reference for bipolar operation, eliminating tracking errors between positive and negative signals.
- ☐ Arithmetic operations and linearization as part of the conversion process.

THE WORLD'S FIRST SINGLE CHIP, AUTO ZERO, DUAL SLOPE INTEGRATING A/D CONVERTER

DAC's That Feature Uncompromising Performance — Compatible with Resolution

Analogic digital to analog converters offer a broad range of resolution — from 8 to 16 bits with truly compatible accuracies and stabilities. The models illustrated on these pages are the most completely specified in the industry and guaranteed to meet or exceed their specifications. Worst-case error analysis and 100% high temperature burn-in coupled with 100% documented pre-ship test, ensures the user of reliable and repeatable monotonic and linear performance.

Audubon Road ■ Wakefield, Massachusetts 01880 ■ Tel. (617) 246-0300

ANALOGIC®

ANN ARBOR
TERMINALS, INC

DISPLAY TERMINALS

COMPANY

Ann Arbor is a broad-line manufacturer of CRT display and terminal equipment directed toward the OEM market. Ann Arbor was incorporated in Michigan in 1970, and is wholly owned by its employees. It has delivered over 6000 terminals to date, and is currently delivering at a rate of over 250 terminals per month.

PRODUCTS

Ann Arbor utilizes a building-block approach to its product line. Its products are composed of highly-modular, functionally-partitioned PC boards, each of which is generalized and packed to provide a maximum of function and flexibility. This enables the company to offer an extraordinarily broad line of standard products and options at an economical price.

In addition, this approach enables the company to respond well to "custom" needs. Ann Arbor offers an X-MOD service aimed at the customer's low-volume, minor-change-to-standard-product requirements, and a Q-MOD service aimed at his high-volume, special requirements.

X-MOD SERVICE

Ann Arbor offers its X-MOD service where the customer requires a relatively simple modification to a standard unit and where the quantity required does not economically justify PC redesign, development of production and test fixtures, and preparation of formal product documentation. X-MOD's are accomplished by a technician who orders the closest standard unit from production and modifies it to the customer's requirements.

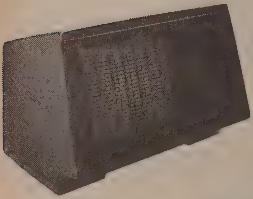
Q-MOD SERVICE

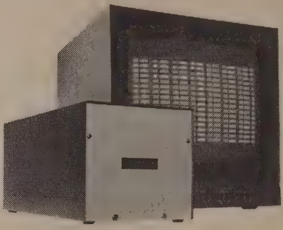
Ann Arbor offers its Q-MOD service where the customer requires major design changes to an existing product, or a completely new design. Q-MOD's are accomplished by a product engineer who develops and documents the product to the customer's specifications, releases it to production, and monitors the early deliveries to assure that the production test and QA procedures are adequate to assure delivery of a reliable, quality product. A non-recurring engineering (NRE) charge is included in Q-MOD quotations to cover these costs.

ORDERING

Ann Arbor's standard product line offers an enormous number of possible combinations of products and options and multiple options. Some combinations are not available. They are not technically viable or operationally practical. Others are available only in quantity. Purchase orders should be based on factory quotation only.

RECEIVE-ONLY (RO) TERMINALS

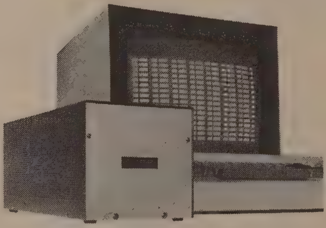




KEYBOARD SEND/RECEIVE (KSR) TERMINALS

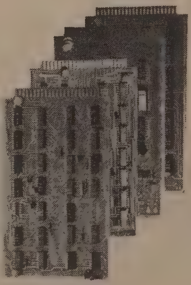
DESIGN III

High-performance desktop model with separable matching keyboard, styled to complement the decor of the most modern surroundings.



SERIES 200

Hard-working, rugged modular concept featuring separately-packaged display electronics, keyboard, and monitor for total versatility in industrial environments.



BOARD SETS

Pre-engineered memory, timing, cursor, and signal conversion functions in easy-to-use PC module form, for the OEM who prefers to package his own terminal electronics.

OPERATION

The displayed data is stored in and refreshed from an internal refresh memory. The data remains stored and displayed until changed by the data source. The data is written and the cursor positioned under control of the memory address register. Characters enter at the cursor position. The cursor automatically advances after each character entry. Each entry overwrites the character previously displayed at that position; no other data on the screen is affected. Advance of the cursor past the end of a line automatically advances it to the beginning of the next line. Advance of the cursor past the end of the bottom line advances the cursor to the beginning of the top line (Page display) or all lines move up one, the bottom line clears, and the cursor remains in the bottom line (Roll display).

KEYBOARD

Upper/lower case terminals use the Ann Arbor KB300C Keyboard; upper case only terminals use the KB300B Keyboard. See OPTIONS-KEYBOARDS.

OPERATION

The terminal operates in the same manner as a KSR TTY terminal. As the operator strikes each key, its character code is sent to the computer as an asynchronous serial character at the specified baud rate. If the terminal is set for full-duplex, the computer echoes back the character (or an error message) to the terminal's memory, whereupon it is displayed on the screen. If the computer is not programmed for echo-back, the terminal may be set for half-duplex, whereupon the character is fed back into the terminal's memory as it is transmitted. In either case, the incoming data is stored and displayed as described for the RO terminal.

ANN ARBOR TERMINALS, INC

CASE OPTIONS

SERIES 200 CASE

All Ann Arbor terminals are available in the Series 200 Controller case. The Series 200 contains the same display electronics as the Design III, packaged for use with free-standing keyboards and monitors. The Series 200 is more rugged and less expensive than the Design III and permits the user greater freedom in tailoring his terminal configuration, keyboard style, and monitor size to his specific application. The Series 200 interface is identical to the Design III, except that a keyboard input connector is added to the KSR units and a video ouput connector to all units. The keyboard input requires 7-bit-parallel ASCII data and a rising-edge strobe at TTL levels. The video output provides R170-compatible composite video capable of driving most commercial TV monitors.

BOARD SET (KSR TERMINAL)

All Ann Arbor terminals are available to qualified OEM's as board sets. These are the same printed circuit boards used in the Design III. When interconnected and powered according to documentation supplied, they perform all the functions of the applicable Design III specification. Board sets are supplied in groups of 25 sets minimum of a given model. The typical terminal board set consists of 4 boards: Timing, Memory, Cursor, and Serial. The Timing board generates the raster scan and memory timing for the specified character format, generates the timing for character-addressable memory load, generates the cursor video, and provides for asynchronous input control of memory load. The Memory board stores the full screen of data and generates the composite video for display of the data on the TV monitor. The Cursor board buffers incoming data to memory, holds cursor address, and mechanizes the roll/page and command set operations. The Serial board converts incoming serial data to bit-parallel for the Cursor board, converts bit-parallel keyboard data to serial for transmission, and provides gating for local, half-, and full-duplex operation.

PHYSICAL

Size: 4.5″x8″
Spacing: 0.5″, except Memory 1″
Connector: PC edge-card on 4.5″ end
Mating: Dual 22-pin, 0.156″ c-c
Power: ±5, ±12Vdc, ±2%
Accessories: Power Supply

ANN ARBOR TERMINALS, INC

OPTIONS

CR/LF OPTIONS

Ann Arbor terminals are factory preset to require both CR- and LF-codes to start a new line before end-of-line, and provide automatic wrap-around to new line at end-of-line. The AUTO LF ON CR option enables automatic line-feed on receipt of the CR-code alone. The NEW LINE option enables automatic carriage-return on receipt of the LF-code alone. The HOLD AT EOL option inhibits the automatic wrap-around at end-of-line.

SERIAL INTERFACE OPTIONS

Ann Arbor serial-data terminals are factory configured with an RS232-compatible interface for use with data sets, couplers, and computer TTY channels that are strapped, or strappable, for RS232. Alternatively, they can be configured for current-loop operation, either 20ma or 60ma, for applications requiring direct TTY replacement and/or high noise immunity. For special applications, the terminals can be provided instead with a TTL-logic-level interface.

BAUD RATE OPTIONS

The terminals are factory preset to one of the following baud rates, specified on order: 110, 300, 600, 1200, 1800, 2400, 4800, 9600 baud. The following baud rates are additionally available on some models: 50, 75, 135, 150, 900, 3600, 7200 baud.

BAUD CONTROL OPTIONS

The baud rate is preset by a jumper on the terminal's Serial board. It can be changed in the field by a qualified technician. The following options are offered for applications requiring easier field-selection. DUAL BAUD provides external-switch-selection between two preset baud rates, specified on order. SWITCHED BAUD provides internal switch selection of all available rates. KEYED BAUD provides keyboard selection of all available rates. SPLIT BAUD is offered for applications that require the terminal to send data at one baud rate and receive at another.

PARITY OPTIONS

The terminals are factory preset to generate either Mark or Even parity on outgoing data, depending on model, and to ignore parity on incoming data. The PARITY option permits specification, on order, of Even, Odd, Mark or Space parity on outgoing data, and parity detection on incoming data with errors displayed as a ?-symbol.

CHARACTER ACCENT

This option enables the characters on Ann Arbor terminals to be displayed with visual accents, to highlight or call attention to them, under command (computer or operator) control. Accents vary on individual models but include blink, dual intensity, and reverse video.

EXTERNAL SYNC

This option enables the video from Ann Arbor terminals to be superimposed on ordinary TV picture video. The terminal takes in either picture video or composite sync from the video source and puts out the same signal with the characters on the screen added to it. Controls are provided to add the full-screen of characters, just the bottom line (window), or none at all. A rotate command allows the successive lines on the screen to be rotated into the window. A manual sync control allows the window to be positioned wherever desired in the program output.

SWITCHABLE 0832

This option enables Ann Arbor 1632 terminals (16 lines x 32 characters) to display, and be operated, as 0832 terminals (8 lines x 32 double-height characters) under command or switch control. The option is particularly applicable to RO's because of the increased viewing range, but can also be applied to KSR's.

EXPORT MODELS

This option enables Ann Arbor terminals to operate to export power and TV standards.

RO SERIAL INTERFACE

This option enables Ann Arbor RO terminals to be written from a bit-serial, instead of bit-parallel, data source.

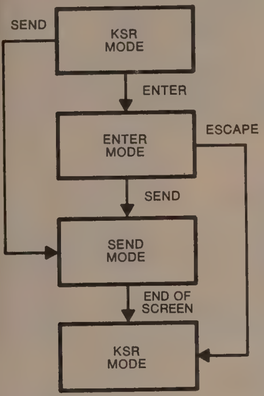
TERMINALS, INC

OPTIONS

BATCH TRANSMIT

This option adds a screen-transmit capability to Ann Arbor KSR terminals. It enables the operator to write to the screen off-line at typing speed, and then transmit the entry to the computer at high-speed. The terminal is normally in KSR mode, full duplex. The terminal is put into ENTER mode on receipt of the Enter code. The terminal goes off-line; the computer can not interrupt. The operator enters data to the screen and, when finished, puts the terminal into SEND mode by entering the Send code. The terminal goes back on-line, transmits the contents of the screen to the computer and returns to KSR mode. Alternatively, when the operator is finished entering data, he may enter the Escape code which puts the terminal directly into KSR mode without transmitting the contents of the screen. In either case, the computer may read (or re-read) the screen at any time in KSR mode by simply sending (or re-sending) the Send code.



Mode	Key-board	Out-going Data Line from	In-coming Data Line
KSR	Active	Kybd	Active
ENTER	Active	Mark	Inactive
SEND	Inactive	Screen	Inactive
KSR	Active	Kybd	Active

PROTECTED DATA

This option adds a form-filling capability to terminals equipped with Batch Transmit option. It features form generation by operator or computer, protected data-entry with tabulation, and compressed data-transmission. The option enables the operator or computer to set up protected fields on the screen. During ENTER mode, these fields are automatically skipped over; the operator cannot affect them. The operator can terminate entry into an unprotected field, and skip to the beginning of the next, by striking a Tab key. The operator can send and the computer may read, the complete screen or only the unprotected portions.

PRINTER OUTPUT

This option adds an RS232-compatible printer output to terminals equipped with the Batch Transmit option. The option enables the data transmitted from the screen to be steered to either the printer or computer under command control (operator or computer).

TRANSMIT CONTROL OPTIONS

These options are available for use with the Batch Transmit option. They permit the insertion of specified delays and/or control characters into the transmitted data stream. CTS CONTROL enables the start of data transmission to be controlled by a clear-to-send (CTS) input signal. START DELAY enables the start of transmission to be controlled by a preset delay. INSERT STX enables insertion of an STX-code as the first character of each data transmission, and an ETX-code as the last character. INSERT CR enables insertion of carriage return and/or line feed codes into the data transmission at the beginning of each line. CR DELAY enables insertion of a preset delay into the data transmission at the beginning of each line, eg., to allow time for a printer carriage return.

MONITORS

Ann Arbor offers a full line of TV monitors for use with its products. Available screen sizes range from 9- to 23-inches in diagonal to satisfy both near and distant viewing requirements.

OTHER

Ann Arbor offers a full line of accessories for its products, including mating connectors, video cables, RS232 cables, extender boards, and specialized test equipment.

KEYBOARDS

Ann Arbor's keyboards are offered in either of two cases: the Series 200 case, compatible with the Series 200 Controller, or the Series 300 case, compatible with the Design III. Three key layouts (A, B, and C) are available.

DESIGN MODULARITY

The design modularity of Ann Arbor's product line is illustrated below. It starts with a two-board character generator that displays characters in a specified format on the screen of a TV monitor. With the addition of a Cursor board, the character generator becomes Ann Arbor's standard RO terminal. With the addition of a Serial board (and a keyboard), it becomes Ann Arbor's standard KSR terminal. With the addition of a Batch board, it becomes the top of Ann Arbor's line: a KSR with Batch Transmit. All of the options available at the various stages of progression are the result of alternative strappings and/or stuffings of these PC boards.

Q-MOD PRODUCTS

Ann Arbor manufactures a number of products, developed to the requirements of specific customers that have not been generalized to be included in its standard product line. A few representative examples are outlined below. If you have a requirement that involves converting digital data into video, the odds are good that Ann Arbor is currently manufacturing something very close to your requirement.

Q101 CONTROLLER The Q101 Controller provides a burst-loaded RO terminal in a Series 200 case, capable of displaying both alphanumerics and full-graphics in black-and-white or in color. Alphanumerics format is 80 characters x 16 lines. Graphics format is 255 dots horizontal x 192 dots vertical. Data input is bit-parallel TTL, 10 Khz to 1 Mhz asynchronous.

Q102 CONTROLLER The Q102 Controller provides two burst-loaded 80 x 16-character alphanumeric RO terminals in a single Series 200 case.

Q801 CONTROLLER The Q801 Controller provides a strip-chart graphics display, with alphanumeric labelling/annotation capability. The graphics data rolls down through the alphanumeric data, from top to bottom on the screen, at rates up to 60 points per second with 8-bit amplitude resolution.

Q1101 CONTROLLER The Q1101 Controller provides the display electronics for a complete 80x24 character alphanumeric RO terminal on a single PC board.

Q2001 CONTROLLER The Q2001 Controller provides the display and control electonics for up to 32 complete data-entry/data-editing terminals. The electronics are packaged, one terminal per PC board, in a 19″ relay rack. The terminal keyboards and monitors can be located up to 300′ from the Controller.

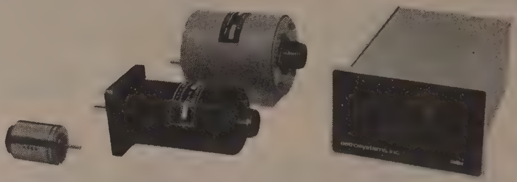
Encoding Systems Electromagnetic Absolute

Rugged, completely-passive magnetic transducers provide absolute position information, with a unique output for each position. Correct information is retained even when power is removed and readings are not affected by electrical noise. Systems offered in a range of full-scale counts from 360 to 100,000 in binary or BCD outputs. All associated electronics provided, including optional visual display. Transducers available in subminiature size or in NEMA housings.



Digital Output Encoders

Type	Code	Full Count	No. of Turns
Single Turn	Binary	10-12 Bits	1
	BCD	360, 1000, 2000, 3600	1
Multi-turn	Binary	16, 17 Bits	64
	BCD	10,000	10
		36,000	36
		100,000	100

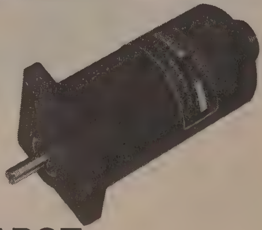
Readout Encoders

Type	Readout Range	No. of Turns
Single Turn	0-999, 0-1999	1
	0-359, 0-3599	1
Multi-turn	0-9999	10
	0-99999	100
	0-35999	36

Differential Encoding Systems

Differential Encoding Systems, consisting of two transducers and an electronics package, measure the angular displacement between two shafts which may be stationary or rotating to accuracies of 0.1°.

Electromagnetic D.C. Rotary Transducers

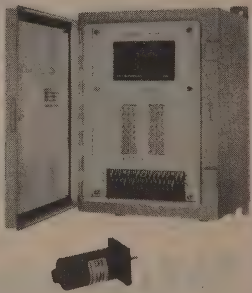


DURAPOT

Wiperless D.C. potentiometers provide high reliability, very low noise level and low starting torque. Unique variable magnetic coupling produces a smooth, continuous D.C. output, proportional to shaft rotation, with a linearity of 0.05% and a deadband of 0.02°. Available in subminiature or heavy-duty NEMA packages. Additional features include: short-circuit proof outputs, up to 20K ohm load and internal or external reference.

Solid State Limit Switches

Replace Rotary Cam-Operated Switches



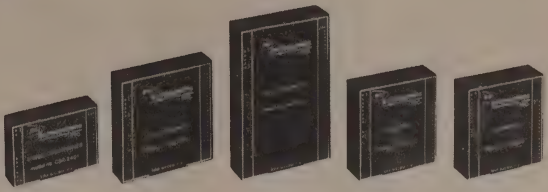
Permit rapid, remote programming of limits, even while machine is operating, to accuracies of 0.1°. Consisting of a small machine-mounted rotary transducer and a separate electronics control box, they are long-life replacements for cam-operated limit switches. Output signals are highly immune to external noise and are used to provide inputs to programmable controllers or to directly control machine operation. Plug-in keys or thumbwheel switches are used to independently set up to 8 pairs of upper and lower limits.

Ideal Input to Programmable Controllers

asi astrosystems, inc.

6 Nevada Drive, Lake Success, N.Y. 11040 (516) 328-1600, TWX 510/223-0411

Synchro Conversion



Multi-speed, multiplexed as well as single channel systems. All inputs, including reference, transformer isolated PCB mounting.

Single Speed Modules

Synchro-to-Digital
Convert all standard synchro voltages and frequencies to binary outputs of 8, 10, 12 and 14 bits. BCD outputs of 360, 1000 and 3600 counts.

Synchro-to-DC
Provides DC output from synchro input .1% and .1° resolution and accuracy available.

Digital-to-Synchro
Provides synchro outputs from 12 bit binary input.

Dual Speed

Standard Module Sets accept dual-speed synchro inputs in the following ratios:

1:8, 1:10, 1:16, 1:20, 1:32, 1:36, 2:36, and 1:64. Depending on the input, up to 18 bit binary and various BCD outputs available.

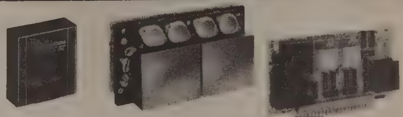
Multiplexing

Convert multiple synchro inputs at high conversion rates. Multiplex mixed voltages and frequencies.

Angle Position Indicators

Completely electronic angle position indicators convert and display standard synchros and resolvers. Available in .01° or .1° accuracy and resolution. BCD outputs available.

High Power Digital to Synchro Converters



Drive all types of torque receivers and/or control transformers. Accept 12 or 13 bit binary information and convert to synchro or resolver information.

Synchro Test Set

SYNCHRO TEST SET

Portable self-contained instrument for rapid in-plant testing of synchros and servos. Displays synchro angles with a resolution of 0.1°. Front panel displays indicate the synchro frequency and voltage as well as the shaft angle.

Standards and Bridges

Standards, Bridges and Decade Ratio Transformers test and simulate synchros, resolvers and servo systems. All units are accurate to 2 arc seconds with resolution from 15° to .0001°

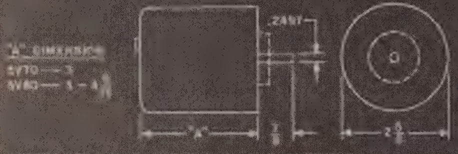
BALDWIN® ENCODERS

A COMPLETE LINE OF LABORATORY TESTED AND FIELD PROVEN OPTICAL ANALOG-TO-DIGITAL ENCODERS

5V70 Series Incremental
5V80 Series Absolute



DOTTED PORTION – LOW TORQUE BEARING ASSEMBLY

Most economical encoders in the Baldwin line.

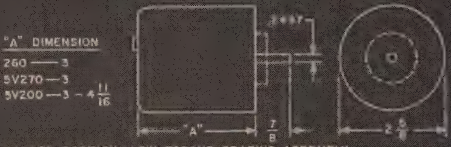
Incremental resolutions to 8000 counts per revolution with zero index available. Photocell, quadrature square wave or direction sensed pulsed outputs. Frequency response to 100 Khz. T^2L compatible.

Absolute resolutions of 0-359, 2^8, 2^9, 10^3 and 2^{10}. Parallel outputs in cyclic binary, natural binary or BCD. Photocell or T^2L compatible signal levels. Reverse count feature is standard. Gating option for sample and hold applications.

All feature single +5V operation, integrated electronics, field replaceable lamp.

Options: low torque bearings, low inertia and metallized disks, thru shaft, side-exit cable and wide operating temperature range.

260 Series Tachometer
5V270 Series Incremental
5V200 Series Absolute



DOTTED PORTION – LOW TORQUE BEARING ASSEMBLY

These popular encoders offer high resolutions and a wide range of operating features in a small size.

Tachometer resolutions to 10,000 counts per revolution with zero index available. Frequency to 1 Mhz.

Incremental resolutions to 20,000 counts per revolution with zero index available. Photocell, quadrature square wave or direction sensed pulsed outputs. Frequency response to 100 Khz. T^2L compatible.

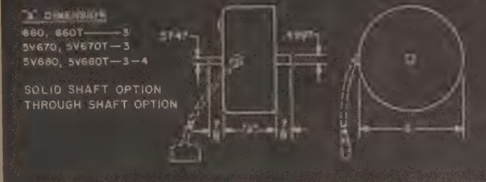
Absolute resolutions of 2^8 thru 2^{14}, 10^3, 0-3599, 10^4. Parallel outputs in cyclic binary, natural binary or BCD. Photocell or T^2L compatible signal levels. Reverse count feature is standard. Gating is optional.

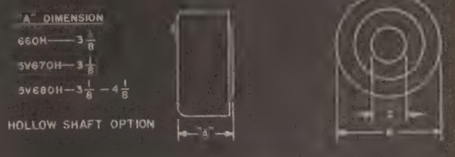
Incremental and absolute encoders feature +5V operation. All have self-contained integrated electronics and easily accessible, single field replaceable lamp.

Options: Ruggedized and low torque bearings, low inertia and metallized disks, side exit cable, wide operating temperature range.

660 Series Tachometer 5V670 Series Incremental

5V680 Series Absolute





Unique in the field of direct reading optical encoders, this group offers a combination of high resolutions, great frequency response and a wide choice of mechanical configurations.

Tachometer resolutions to 24,000 counts per revolution index available. Frequency to 1 Mhz.

Incremental encoders offer resolutions up to 48,000 counts per revolution with or without zero index. Photocell, quadrature square wave or direction sensed pulsed outputs. Frequency response to 100 Khz. T^2L compatible.

Absolute position encoders have standard resolutions of 2^{14} thru 2^{16}, 10^4 and 0-35999. Cyclic binary formats are offered in photocell or square wave output options. Natural binary or natural BCD outputs are other internal electronics options. Gating option is also available for customer sample and hold aplications. Outputs are fully T^2L compatible.

Proprietary circuitry compensates for any changes in photocell levels due to temperature or supply voltage, thereby maintaining original accuracy. Electronic monitor output indicates marginal operation condition or power failure.

Incremental and absolute position encoders in these series feature single +5V operation. All employ integrated circuitry and a field replaceable lamp. Standard single, thru and hollow shaft designs.

Options: Metallized disks, special bearing designs, serial outputs, wide operating temperature range.

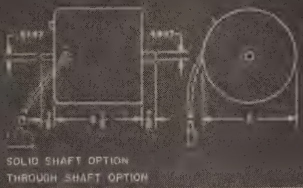
3700 Series Incremental

Most rugged encoder offered in the Baldwin line. Designed expressly for industrial applications.

Encoder is completely sealed against hostile environments. Heavy duty bearings, ½ inch shaft with contacting seal. Solid state, vibration immune light source. Internal integrated electronics with quadrature square wave or direction sensed pulsed outputs from noise rejecting differential line drivers.

Resolutions to 12,700 counts per revolution with zero reference option. Dual inch/metric resolution options have electrically selectable outputs.

690 Series Optical Resolver



This line of Baldwin absolute position encoders uses patented techniques to extend resolutions to 2^{17} thru 2^{20} per revolution while maintaining a 6 inch package diameter.

Internal electronics is integrated circuitry. Outputs are T^2L compatible.

Electronic compensation circuitry maintains accuracy for wide changes in temperature or power supply voltages. Dual detection stations cancel effects of bearing errors.

Solid and thru shafts are standard configurations. Lamps are field replaceable.

Options: Serial outputs, CW shaft rotation for increasing count, wide operating temperature range.

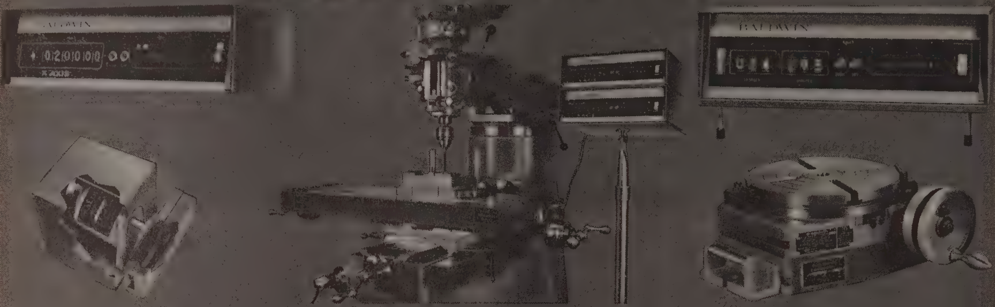
1190 Series Optical Resolver

The 1190 Series with a hollow shaft feature complements the 690 Series optical resolvers. Resolutions of 2^{17} thru 2^{20} are standard.

All features of 690 Series are incorporated in this design. Six inch hollow shaft permits passage of large waveguides or slip ring assemblies.

Construction is all stainless steel for strength and integrity.

ENCODER SYSTEMS



The Baldwin RPR rack and pinion system may be used to upgrade or retrofit mills, lathes, grinders, drills, etc. that would benefit from 1, 2 or 3 axis readout or control.

System consists of 3700 Series incremental encoder with precision pinion, housed rack, anti-backlash encoder mount, BC60 display and interfacing hardware and cables.

System resolution is .0005 in. or .01mm. Enclosed rack is supplied pre-assembled and pre-calibrated.

Designed expressly for the Bridgeport Series I and II Turret Millers, the Baldwin LPR System consists of two linear encoders and two bidirectional counters. All interconnecting cables are supplied.

Completely eliminates lead screw errors, displays true worktable position. Resolution .0005 in. or .01mm., switch selectable. Six digit readout, thru zero counting, floating zero. Preset and zero offset options.

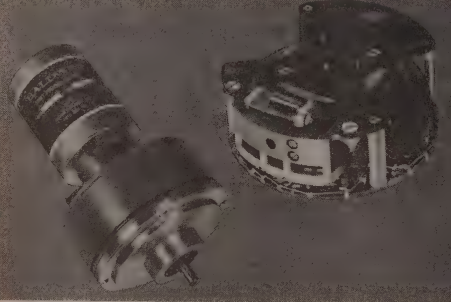
Protective encoder housing is fully enclosed against dirt, oil and coolants, stable chrome coated glass scale, field replaceable lamp. Installed on new or existing machines with no machine modification.

Designed to be mounted on Bridgeport RT12 and RT15 rotary tables, this system incorporates a rotary encoder using proven Baldwin encoder design features and an especially constructed bidirectional counter that displays 0-359° 59.5′.

Displays true angle of table to 0.5′. Operates in three modes - CW, CCW and thru zero for maximum utility. Floating zero, and preset features are standard.

Non-contacting encoder is fully enclosed against dirt, oil, and coolants. Disk is rugged chrome coated glass. Field replaceable lamp.

Installation is at the factory or by qualified personnel.



CUSTOM APPLICATIONS

Baldwin's technical personnel stand ready to assist in applying encoders in custom configurations.

Unusual linear or non-linear codes, special supply voltages, RFI shielding, output interface buffers and parallel/serial converters.

Direct mounting on torque motor drives or low inertia capstan motors.

Compact designs containing 2^{13} bits in a size 11 servo package, multiturn configurations.

Space and military applications requiring high reliability criteria.

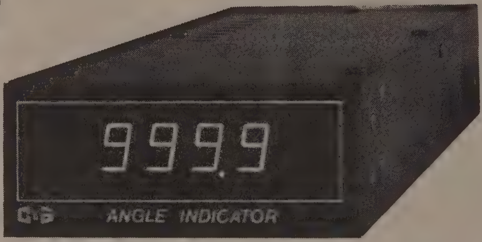
ANGLE INDICATORS SHAFT ENCODERS

MODEL SD150 ANGLE PANEL METER

Model SD150 is a new low cost all solid state digital panel meter accepting either synchro or resolver signals. Completely self-contained, the SD150 derives power from the reference or AC line and displays the output on bright .55 inch planar characters. The conversion process is ratiometric using C & A's phase-tracking technique assuring drift free operation over long time periods. Fully buffered BCD output data is available at the rear connector.



- Input 11.8/90 vrms L-L 60 or 400 Hz. Ref.: 26/115 vrms, transformer isolated
- 359.9 Full Scale standard-custom scale factors to 999.9 F.S. also available
- Guaranteed accuracy ±6 minutes
- Power input 115v/230v ±15% 47-440 Hz.
- Size 1.75"X4.125"X8"
- Leading zero blanking, Lamp-test.

SERIES SE100/SE100R ABSOLUTE SHAFT ANGLE ENCODERS

Series SE100 is a self-contained system for the conversion of absolute shaft position or rotation to direct visual readout and digital output for external use. The low cost reliable electromagnetic transducer is unaffected by industrial environments and can be positioned as far as 200 feet away from the readout.

The readout electronics is completely solid state containing the latest ratiometric conversion techniques guaranteeing long term stability and trouble free operation. Typical applications for the Series SE100 include valve position readout, flow measurement, navigation systems and machine tool positioning systems.

- 359.9 Full Scale standard-custom scale factors to 9999 F.S. also available
- Completely self-contained, requires only 115V/230V AC line power
- Encoder is absolute and has a digital output for each mechanical position input
- Correct output is immediately restored after power interruption
- 2 basic accuracies available ±.1°, ±.2°
- Many transducers available (as small as size 5, SAE ARP-461)
- Only six wires max. necessary between transducer and electronic readout
- BCD output data available at rear connector

SHAFT ENCODERS LIMIT SWITCHES

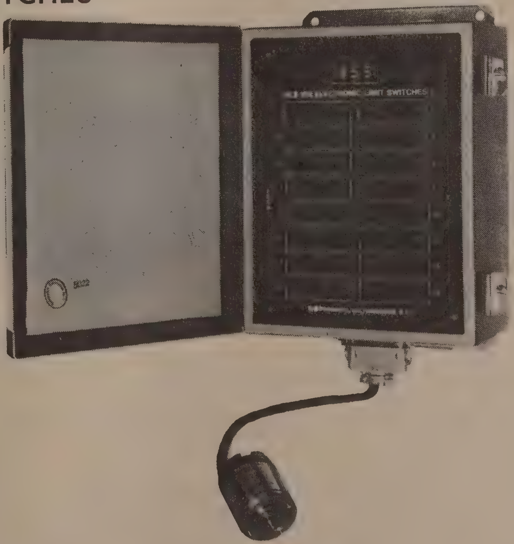
MODEL SE103 ABSOLUTE SHAFT ANGLE ENCODER

Model SE103 is the low cost version of C & A's line of absolute shaft angle encoders. Designed for the budget minded, it can be used in virtually any application requiring mechanical shaft angle measurement.

- 359 Full Scale standard—custom scale factors to 999F.S. also available
- Guaranteed Accuracy ±.5°
- BCD output data available at rear connector
- Low cost reliable electromagnetic transducer
- Completely self-contained, requires only 115v/230vac line power

SERIES DLS103 PROGRAMMABLE LIMIT SWITCHES

C & A's new line of programmable solid state limit switches are designed to replace electromechanical cam-operated switches. They consist of a rotary transducer connected through a 6-wire cable to a digital programming unit. Advantages include greatly improved reliability, ease of installation and elimination of mechanical wear. They can be remotely set while in operation anywhere from 1° to 359° with an accuracy, resolution and repeatability of 1°. Optional mechanical interfaces are available for many applications.



- 359 Full Scale standard—custom scale factors to 999 F.S. also available
- Completely self contained, requires only 115v/230vac line power
- Choice of single or dual limit switch configuration
- Absolute position system—Settings not affected by electrical noise or power interruptions
- Complete line of rugged low cost electromagnetic transducers available
- Programming unit may be located as far as 200 feet from transducer
- Outputs available as logic levels or relay closures
- Nema 12 enclosure standard, others optional

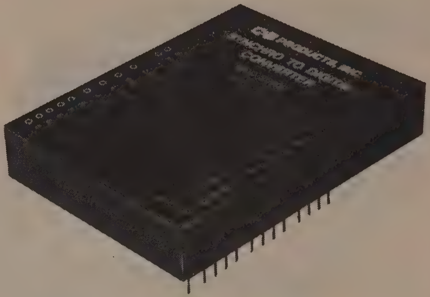
(212) 779-4303

SYNCHRO/RESOLVER DATA CONVERTERS



SERIES SD300/RD300
SYNCHRO/RESOLVER TO DIGITAL

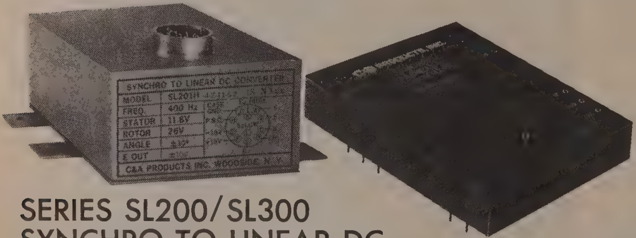
The industry's best buy for the conversion of synchro or resolver signals to digital angle data. Using C & A's proprietary continuous phase-tracking technique, performance is guaranteed in the real world of temperature variations, noise, quadrature, harmonic distortion, amplitude and frequency variations.

- Input: 11.8/90 vrms L-L 60 or 400 Hz. Ref.: 26/115 vrms
- Output: 13 bits Binary (LSB = 2.6 minutes) or 4 decade BCD (LSD = 6 minutes)
- Fully buffered TTL compatible.
- Guaranteed accuracy: ±5.3 minutes (Binary)/ ±.1° (BCD)
- Fast-1 millisecond max. conversion rate
- Transformer isolated, high input impedance to both signal and reference
- One compact module

SERIES DS300/RS300
DIGITAL TO SYNCHRO/RESOLVER

Complementing C & A's line of S/D converters, Series DS300/RS300 accurately convert digital angle data into either three-wire synchro or four-wire resolver signals.

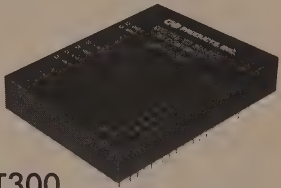
- 14 bits Natural binary angle input
- Guaranteed accuracy ±4 minutes
- Reference and output transformer isolated
- Drives 11.8 or 90 vrms., 60 or 400 Hz., Synchros or Resolvers—2 VA Standard



SERIES SL200/SL300
SYNCHRO TO LINEAR DC

This series converts either synchro or resolver input into a linear DC voltage proportional to the input shaft angle. They utilize the latest ratiometric techniques and are insensitive to input frequency and amplitude variations. Noise and distortion immunity is guaranteed using C & A's minimum delay phase sensitive demodulation techniques. Series SL200 is the hermetically-sealed ruggedized flight-test version.

- Input: 11.8/90 vrms L-L 60 or 400 Hz. Ref.: 26/115 vrms transformer isolated
- Output: ±10v for ±180° input, other scale factors readily available
- Guaranteed accuracy :±6 minutes
- Output is glitch free with infinite resolution
- Fast-1 millisecond max. conversion rate
- Quality components—insuring long term stability

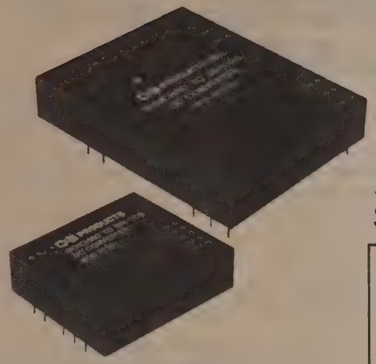


SERIES DT300
DIGITAL TO SIN/COS DC

Rounding off C & A's line of converters is this series which converts digital angle data into a pair of DC voltages proportional to the sine and cosine of the digital angle input. These converters are suitable for applications requiring polar to rectangular conversion or digitally generated radar PPI displays.

- 13 bits Natural binary angle or 4 decade BCD input (359.9FS)
- 10 Sinθ vdc and 10 Cosθ vdc output
- Fast-1 millisecond max. conversion rate
- Guaranteed ±6 minutes accuracy
- Stable internal reference
- Optional-external variable R voltage input

SYNCHRO/RESOLVER DATA CONVERTERS

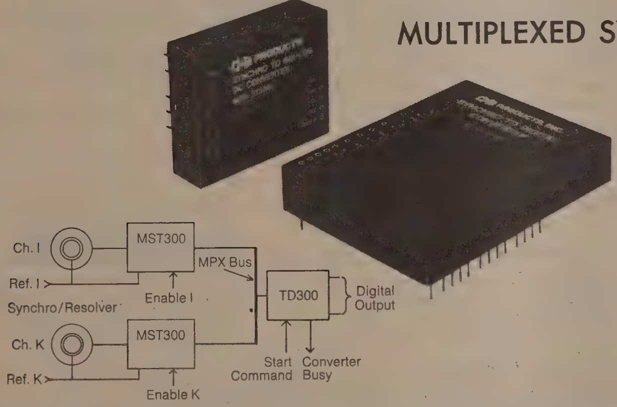


SERIES ST300/ST300A SYNCHRO TO SIN/COS DC

Series ST300/ST300A are miniature low cost modules that transform either a 3-wire synchro or 4-wire resolver input into a pair of DC voltages proportional to the sine and cosine of the transducer shaft angle. Both series use phase sensitive demodulation techniques with special minimum delay filters making them particularly useful in applications requiring accuracy, speed and noise immunity as in radar PPI generation. Series ST300A contains regulators which make output voltage levels independent of synchro/resolver reference voltage variations.

- Input: 11.8/90 vrms L-L 60 or 400 Hz.
  Ref.: 26/115 vrms, transformer isolated.
- Output: 10 Sinθ vdc; 10 Cosθ vdc.
- Guaranteed Accuracy: ±3 minutes (ST300)/±6 minutes (ST300A)
- Dynamic Lag: 5 seconds/rpm
- Conformity: .15% Full Scale
- Regulation: ±.1% for a ±10% line voltage variation (ST300A only)

SERIES MSD300 MULTIPLEXED SYNCHRO TO DIGITAL



A flexible low cost random access system consisting of miniature plug in modules designed for multiplexed synchro/resolver to digital converter applications. Each system requires only one MST300 input module per channel and one TD300 central converter.

- 13 bit Binary or 4 decade BCD output
- Guaranteed accuracy ±5.3 minutes (Binary)/ ±.1° (BCD)
- Conversion rate 1 millisecond/channel max.

ADDITIONAL PRODUCTS

- CUSTOM SYSTEMS

CHRONO-LOG CORPORATION

DIGITAL CLOCKS and CALENDARS

CHRONO-LOG DIGITAL CLOCKS and CALENDARS are used wherever a digital BCD output of real or elapsed time is required, such as in data logging, data transmission, data processing, telemetry, and digital print-out systems. They can also provide outputs for driving remote digital time diplays.

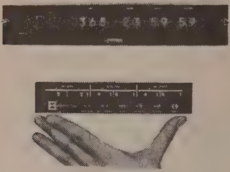
These versatile clocks and calendars provide BCD (8-4-2-1) TTL compatible outputs in parallel or in a character serial (bit parallel) format for ease of interface to bit-limited or character serial input devices.

LOW COST SERIES 70,000 LED CLOCK/CALENDAR

- Time in hours, minutes, seconds
- Month/Day or Day of Year Calendars
- Internal standby battery feature
- Instrument panel or rack mounting

The Series 70,000 Clock/Calendars provide buffered parallel and/or character-serial (bit parallel) TTL compatible BCD outputs of time.

The time base can be line frequency, an external frequency or various internal crystal oscillators. A unique line-sync multivibrator can also be supplied, locked to the line frequency but free-running when line frequency fails. Use of the line-sync multivibrator and internal standby battery provides a low cost unit with power failure operation capability.

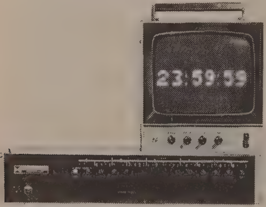


SERIES 30,000 DIGITAL CLOCK

- BCD display, 1¾″ panel
- 0.6″ or 0.8″ NIXIE® type display, 3½″ panel
- Extended time range capability
- BCD output time resolution to 100 microseconds
- Years, Month/Day or Day of Year Calendars
- Internal standby battery feature

The Series 30,000 Clock/Calendars provide time ranges of decimal parts of hours or minutes as well as hours, minutes and seconds, and many other time ranges. BCD output resolutions to the nearest 100 microseconds can be provided.

The clock time base can be line frequency, an external frequency or various internal crystal oscillators. When the standby battery feature is supplied, an external frequency or internal crystal oscillator time base is required.



SERIES 40,000 VIDEO CLOCK
SERIES 60,000 STUDIO CLOCK

- Video output for time display on TV monitors
- Single wire connection to remote displays
- Various time ranges
- Month/Day or Day of Year Calendars
- All displays in absolute synchronism

For systems requiring remote time displays, the Series 40,000 Video Digital Clocks can drive many remote low cost video monitors displaying time with 1″ to 3″ high characters. Only a single wire connection between the remote video monitors is required.

The Series 60,000 Studio Digital Clock provides a small size display of time inserted into your video information for display throughout a studio or laboratory. It is also useful for inserting digital time into video tape recordings.

GENERAL INFORMATION
CLOCKS AND TIME CODE INSTRUMENTS

All units provide buffered and gated BCD parallel outputs with either positive logic (ONE = +5 V.) or negative logic (ONE = 0 V. DC). Most units also provide pulse rate outputs such as 1 pps, 10 pps, 1 ppm, etc.

All units can operate from 115 V or 230 V AC (50-400 Hz) and are available for 19″ rack mounting. In most cases, power failure is displayed on the front panel and an output signal is provided.

Each unit is supplied with all mating connectors and a detailed Instruction Manual. All integrated circuits and LED or NIXIE® type displays are mounted in plug-in sockets for minimization of spare parts requirements and ease of service.

All Digital Clock/Calendars include an interlock circuit which allows the external system to "hold" the time during readout without introducing a timing error.

All Clocks and Time Code Generators are capable of external control for Start/Stop and similar functions.

CHRONO-LOG CORPORATION / 2 WEST PARK RD., HAVERTOWN, PA. / (215) 853-1130

CHRONO-LOG
CORPORATION

TIME CODE INSTRUMENTS

CHRONO-LOG TIME CODE GENERATORS provide serial modulated carrier and DC level shift codes for recording time on analog magnetic tape recorders, oscillographic strip chart recorders, and for transmission to emote locations.

CHRONO-LOG TIME CODE READERS accept the serial modulated carrier time codes from tape recorders or transmission links and provide both a visual display of digital time and BCD parallel outputs for data systems and tape search control systems.

SERIES 9,000 TIME CODE READER
TIME CODE GENERATOR/READER

- Low cost
- Low profile 1¾″ panel height
- IRIG-A, B, E or XR-3 codes
- "On time" update
- LED dot-matrix shaped-character display
- Single or multi-code models

The Generator/Reader time base can be either an external frequency or one of several internal oscillators with stabilities to ±1 x 10^{-7} per week. Semi-automatic synchronization to WWV is provided.

As a Reader, the AGC amplifier accepts inputs in the forward direction at amplitudes from 350 mv. to 5 V peak-to-peak and frequencies from 100 Hz to 100 KHz. In multi-code models, the code format is automatically detected while reading. Buffered TTL compatible parallel BCD outputs are standard, with time resolution to the nearest millisecond available. Code formats can include day-of-year information.

SERIES 4,000 TIME CODE GENERATOR
SERIES 7,000 TIME CODE GENERATOR

- IRIG and NASA Codes
- Oscillographic (Slow) Codes
- LED, NIXIE® or BCD displays
- Single or multi-code models

The Time Code Generator time base can be either an external frequency or one of several internal oscillators with stabilities up to ±1 x 10^{-7} per week. Semi-automatic synchronization to WWV is provided. Options include oscillographic slow codes for recording on graphic recorders. Time Codes can include day of year. The Series 7,000 Time Code Generators are multi-code models providing five (5) code formats simultaneously.

Parallel TTL compatible buffered BCD outputs for hours, minutes, seconds, and days where applicable, are standard.

SERIES 5,000 TIME CODE READER
SERIES 6,000 TIME CODE GENERATOR/READER

- Forward and reverse reading
- IRIG and NASA Codes
- Switch selectable IRIG A, B or E models
- "On-time" update
- 0.6″ or 0.8″ NIXIE® type displays
- Parallel BCD outputs to milliseconds
- Error bypass and digital filtering
- Oscillographic Slow Codes option
- Advance/Retard option

The Series 5,000 Time Code Readers can read in both forward and reverse directions. The AGC amplifier in the Time Code Reader accepts input amplitudes from 350 mv. to 5.0 V peak-to-peak at frequencies from 100 Hz to 100 KHz. An error switch on the front panel allows the Reader to bypass 0, 1, 2, 4, 8 or infinite successive error frames.

The Series 6,000 Generator/Readers combine in a single unit the features of the Series 4,000 Generators and Series 5,000 Readers and are available with or without day-of-the-year calendars.

When used with the Series 8,000 Tape Search Control, the Time Code Generator/Reader functions as a complete Generator and Automatic Tape Search Control System for data retrieval and analysis.

SERIES 8,000
TAPE SEARCH CONTROL

- Fast forward and fast reverse search
- Single cycle or repeat cycle playback
- START/STOP resolutions to 0.1 millisecond depending on code
- Five modes of operation
- Momentary or maintained contact outputs for tape control

The Series 8,000 Automatic Tape Search Control Unit converts a Series 5,000 Reader or Series 6,000 Generator/Reader into an automatic tape playback control unit for searching, editing and data reduction of analog magnetic tape recordings.

The Tape Search Control Unit controls the tape drive to search for desired segments of data at high speed; playback the segment at normal speed; start and activate external data reduction equipment; recycle the tape drive at high speed to replay the desired segment as if it were a tape loop; and stop the tape drive at the end of the desired segment.

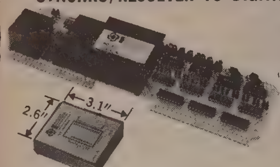
SYNCHRO CONVERTERS/DISPLAYS/ENCODERS

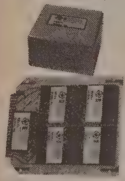
STANDARD LOW COST UNITS TO SATISFY ALMOST ANY SYNCHRO/RESOLVER OR SHAFT INTERFACING REQUIREMENT

SYNCHRO/RESOLVER TO DIGITAL Series SDC40/60



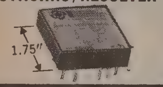
INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** 14, 12 or 10 bits parallel binary or BCD. **ACCURACY:** ±4, ±6 or ±30 minutes of arc. **PACKAGE:** A) 2.6" x 3.1" x .82"h Module B) 2.6" x 9.25" x .9"h or 4.5" x 6.5" x .75"h repairable PC card.

SYNCHRO/RESOLVER TO LINEAR DC Series SLD200



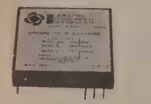
INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** A) −10 to +10 vdc linear with angles from −180° to +180° B) −10 to +10 vdc linear with angles from −90° to +90° C) 0 to +10 vdc linear with angles from 0° to 360°. **ACCURACY:** ±15, ±30, or ±60 minutes of arc. **PACKAGE:** A) 3.2" x 3.4" x 1.8"h Module B) 4.5" x 6.5" x .75"h repairable PC Card.

SYNCHRO/RESOLVER TO SINE-COSINE DC Series SD100



INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** ±10 sin θ vdc; ±10 cos θ vdc. **ACCURACY:** ±2 or ±4 minutes of arc. **PACKAGE:** 1.75" x 1.75" x .6"h or 3" x 3" x .625"h Module.

INVARIANT SYNCHRO/RESOLVER TO SINE-COSINE Series SD100 I

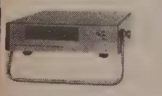


INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** ±10 sin θ vdc, ±10 cos θ vdc. **ACCURACY:** ±4 minutes of arc. **INVARIANCY:** A ±10% change in the input or reference voltage results in a ±.5% change in the individual DC outputs. **PACKAGE:** 3" x 3" x .625"h Module.

SYNCHRO ANGLE INDICATOR Series AI400

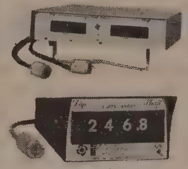
INPUT: 11.8/90 vrms L-L, 60 or 400 Hz. Ref: 26/115 vrms. **OUTPUT:** 5 Digit display and BCD data. **ACCURACY:** ±.1° or ±.05° with .02° resolution. **PACKAGE:** 9.5"w x 1.75"h x 12" Deep — Bench or Rack Mounting.

BINARY ANGLE INDICATOR (BINARY TO BCD) Series BAC100



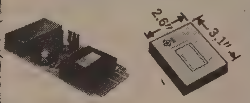
INPUT: Up to 16 bits of parallel binary data, TTL compatable. **OUTPUT:** 5 digit display of angle (0° to 359.99°) OR ANY OTHER SCALE FACTOR DESIRED FROM 0 TO 99999 REPRESENTING ENCODER POSITION, RANGE, PRESSURE, WEIGHT, ETC. **ACCURACY:** ±.01° (±1 lsb). **PACKAGE:** A) 7.0"w x 1.75"h x 8.25" deep — Bench or Rack Mounting B) 4.5" x 6.5" x 1.8"h PC Board requiring +5 vdc at 1 amp C) 2.6" x 3.1" x .82h Module.

SHAFT TO DIGITAL (ENCODERS) Series DS70 & DS100



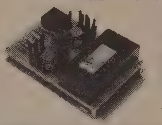
INPUT: Shaft angle position, coupled to "DIGI-SHAFT" system. **OUTPUT:** Four digit display (0° to 359.9°) + BCD data available. **ACCURACY:** ±.1° from shaft position input to digital output. **PICKOFF:** Resolver (Size 15 — 1.4"od x 2.6"L). **PACKAGE:** A) SINGLE AXIS (DS70) — 3.5"h x 8"w x 12.5" deep — Bench/Rack Mount B) DUAL AXIS (DS100) — 3.5"h x 16"w x 12" deep — Bench/Rack Mount.

DIGITAL TO SYNCHRO/RESOLVER Series DSC40/60



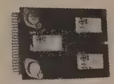
INPUT: 14, 12 or 10 bits parallel binary and 26/115 vrms reference. **OUTPUT:** 11.8/90 vrms. L-L, 60 or 400 Hz capable of driving 1VA, 2VA or 5VA LOADS: (up to 3 T.R.'s). **ACCURACY:** ±4, ±15 or ±30 minutes. **PACKAGE:** A) 2.6" x 3.1" x .82"h Module B) 4½" x 9¼" PC Card with edge connector (5VA units).

DC ANGLE TO SYNCHRO/RESOLVER Series LDS500



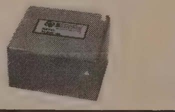
INPUT: ±10 vdc or ±100 vdc representing ±180° of angle. **OUTPUT:** 11.8/90 vrms L-L, 60 or 400 Hz capable of driving up to three size 11 T.R.'s (75 ohms L-L). **ACCURACY:** ±15 or ±30 minutes of arc. **PACKAGE:** (3) repairable 4.5" x 6.5" x 1"h PC Boards stacked with one edge connector.

DC SIN COS TO SYNCHRO DRIVERS Series DCS400



INPUT: ±10 vdc representing sin θ and cos θ. **OUTPUT:** 11.8/90 vrms L-L, 60 or 400 Hz capable of driving up to three size 11 T.R.'s (75 ohms L-L). **ACCURACY:** ±6, ±15, ±30 minutes of arc. **PACKAGE:** A) 4.5" x 6.5" x .8"h repairable PC Card. B) 4.5" x 9.25" x 1"h PC Card.

RECTANGULAR TO POLAR Series RP600



INPUT: R sin θ and R cos θ from 50 mv to 10 vdc. **OUTPUT:** R and θ. **ACCURACY:** θ: ±15 minutes at R = 10, R: ±.1% F.S. **PACKAGE:** 3.2" x 3.4" x 1.8"h Module.

ADDITIONAL PRODUCTS

- Hi Speed Multiplexed Syn to Digital
- Multiplexed Syn to Linear DC
- Digital Sin-Cos to Synchro
- Incremental Encoder Readouts
- Selsyn to Digital/DC
- Polar to Rectangular

ALL SYNCHRO INPUT/OUTPUT UNITS

- Available in 0°C to 70°C or −55°C to +85°C temperature range
- TTL compatable outputs and inputs
- Operate from ±15 v, or ±15 and +5 vdc
- Transformer isolated inputs/outputs
- Solid State construction
- CAN BE MADE FIELD OR FACTORY REPAIRABLE
- Available hermetically sealed and to MIL SPECS (E-5400)
- Delivery: Stock to 4 weeks (small quantity)

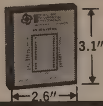
SYNCHRO CONVERTERS/DISPLAYS/ENCODERS

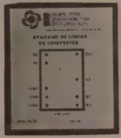
STANDARD LOW COST UNITS TO SATISFY ALMOST ANY SYNCHRO/RESOLVER OR SHAFT INTERFACING REQUIREMENT

SYNCHRO/RESOLVER TO BCD Series SBC



INPUT: 11.8/90vrms L-L, 60 or 400 Hz. Ref. 26/115vrms **OUTPUT:** 3 or 4 decade BCD — scaleable unipolar or bipolar. **ACCURACY:** ±30 or ±6 minutes of arc ±1 LSB. **PACKAGE:** 2.6" x 3.1" x .82" H Module. **OPTIONS:** Choice of Scale factors, Zero offset adjustments (±5%).

SYNCHRO/RESOLVER TO LINEAR DC — (HI-ACCURACY) Series SLD



INPUT: 11.8/90vrms L-L, 60 or 400 Hz., Ref: 26/115vrms. **OUTPUT:** (A) −10 to +10 vdc linear with angles from −180° to +180° (standard) (B) 0 to +10V DC linear with angle from 0° to 360° (special): **ACCURACY:** ±6 minutes of arc at input speeds up to 1440°/sec: **PACKAGE:** (A) 2.6" x 3.1" x .82"H Module; (B) 3.06" x 2.6" x 3.18"H Can.

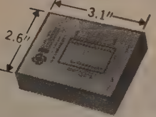
LOW COST ANGLE INDICATOR Series AI540

INPUT: 11.8/90vrms L-L, 60 or 400 Hz, Ref: 26/115vrms +115V 60 Hz power: **OUTPUT:** 4 digit or 3 digit, .5"H LED DISPLAY (unipolar or bipolar). **ACCURACY:** ±6 or ±30 minutes of arc ±1 LSB: **PACKAGE:** (A) 5.5"W x 7.5"L x 2.0"H PANEL MOUNT (DC supplies included): (B) 9½"W x 1¾"H, half rack mounting (DC supplies included. **OPTIONS:** Choice of scale factors, Zero offset adjustment (±5°).

MULTIPLEXED SYNCHRO TO DIGITAL Series MSH

INPUT: 11.8/90vrms L-L, 60 or 400 Hz., Ref: 26/115v rms, up to 128 channels; **OUTPUT:** 12 bit parallel binary or 4 decade BCD (unipolar or bipolar: **ACCURACY:** ±6 minutes of arc ±1 LSB: **PACKAGE:** (A) Central converter — 2.6" x 3.1" x .82"H module, (B) Input Module — 1.5" x 2.0" x .6"H, (C) Transformer Module — 1.5" x 1 3/16" x .6"H (Scott "T" — 400 Hz) +1" x 1" x .8"H (Ref.). **OPTIONS:** (A) choice of scale factor on BCD output, (B) Linear DC output, (C) Systems mounted on PC boards and/or racks.

MULTISPEED SYNCHRO TO DIGITAL Series TSD



INPUT: 11.8-90vrms L-L, 60 or 400 Hz., Ref: 26/115 vrms: **SPEEDS:** 8, 16, 32, 9, 18, and 36: **OUTPUTS:** 16 to 19 bits parallel binary: **ACCURACY:** ±.02, ±.01 or ±.005 degrees: **PACKAGE:** Two or Three 2.6" x 3.1" x .82"H modules. **OPTIONS:** (A) Systems packaged on PC Cards or in racks; (B) 5 digit display.

ABSOLUTE ENCODERS Series DS90

INPUT: Shaft angle position coupled to "DIGI-SHAFT" system: **OUTPUT:** four digit (.5"H) LED display (0 to 9999) +BCD or Parallel binary data (ANY SCALE FACTOR DESIRED): **ACCURACY:** ±1 part in 3600 (single turn) From shaft input to digital output: **PICKOFF:** Resolver (Size 8, 11, or 15): **PACKAGE:** (A) 5.44"W x 7.00" x 1.75"H: (B) Full or half rack: **OPTIONS:** Multi-channels, Zero offset, Presets, DC output, Multi-turn units with 5 digit (99999) output.

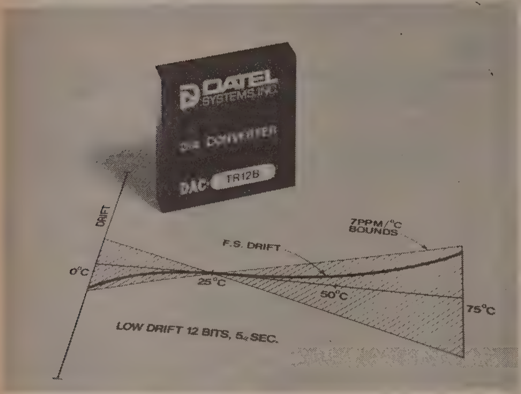
MODULAR DIGITAL-TO-ANALOG CONVERTERS



Datel's line of D/A Converter Modules shown below is one of the broadest lines in the industry, offering the user an extremely wide range of performance parameters and prices. Resolutions of 6 through 16 binary bits are offered with either current or voltage outputs and with 2 to 4 digit BCD input coding available. Almost all models can be operated with either unipolar or bipolar outputs by means of external pin connection. All units except the two lowest cost models have internal ultra stable voltage references with exceptionally low temperature coefficients and excellent long term stability. Settling times down to 25 nanoseconds are available for high speed display applications. A series of low power converters which are CMOS compatible are specifically designed for portable and remote instrumentation applications. Both 2 and 4 quadrant multiplying D/A converters with wideband reference inputs are also part of the Datel line. All of these converters are packaged in compact low profile (.375 inch high) cases with dual in-line spacing and are factory repairable.

The rapid selection guide shown below permits quick selection of model series.

RAPID SELECTION GUIDE

CONVERTER TYPE	SERIES	RESOLUTION	INPUT CODES	OUTPUT (Voltage/ Current)	OUTPUT SETTLING TIME*	TEMPERATURE COEFFICIENT	1-9 PRICE
ECONOMY GENERAL PURPOSE	DAC-9	8 Bits	Bin, BCD	Current	500 nsec.	100ppm/°C	$14.95
	DAC-19	8 Bits	Bin, BCD	Both	300 nsec./20 µsec.	50ppm/°C	$29.00
	DAC-29	8 Bits	Bin, BCD	Voltage	5 µsec.	50ppm/°C	$39.00
	DAC-49	10 Bits	Bin, BCD	Both	300 nsec./5 µsec.	50ppm/°C	$49.00
	DAC-69	12 Bits	Bin	Both	300 nsec./20 µsec.	50ppm/°C	$59.00
GENERAL PURPOSE, HIGH PERFORMANCE	DAC-HB	8, 10, 12 Bits	Bin, BCD	Voltage	5 µsec.	30ppm/°C	$65-$89

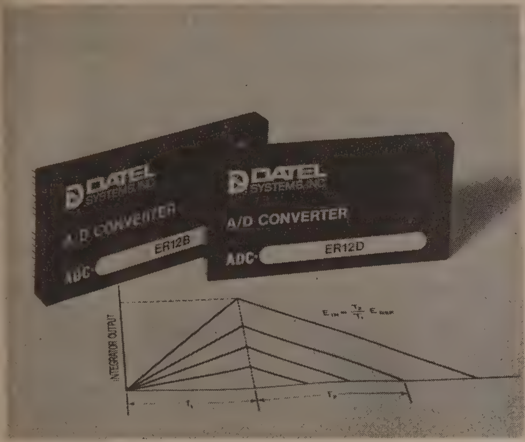
MODULAR ANALOG-TO-DIGITAL CONVERTERS



Datel's A/D Converter product line is an extremely broad offering of different models, giving the user a choice of converter types, specifications, and prices to meet his specific requirements. The conversion methods employed in this line include counter type units for the lowest cost models, successive approximation types used for most of the economy and high performance units, dual slope integrating types used for high noise rejection models, and the parallel and parallel-serial types used for the very fast converters. Resolutions from 4 through 14 bits are offered with conversion times from 40 nanoseconds to 5 milliseconds. Output codes available are binary, BCD, offset binary and two's complement; either unipolar or bipolar inputs can be accepted by external pin connection on most models. Stable compensated voltage reference sources and low T.C. resistor networks result in low temperature coefficients in these converters down to ±10ppm/°C. Most models have parallel data outputs, serial data output, and end of conversion (status) output. A series of low power CMOS converters provides 8, 10, and 12 bit conversion with very low power consumption for portable and remote instrumentation applications. All Datel A/D converters are packaged in compact .375″ to 1.15″ high modules with dual-in-line pin spacing and are factory repairable.

The rapid selection guide shown below permits quick selection of models.

RAPID SELECTION GUIDE

CONVERTER TYPE	SERIES	RESOLUTION	OUTPUT CODES	CONVERSION TIME	TEMPERATURE COEFFICIENT	1-9 PRICE
ECONOMY GENERAL PURPOSE	ADC-Econov.	6 Bits	Bin	50 μsec.	100ppm/°C	$29.95
	ADC-89A	8 Bits	Bin, BCD	100-200 μsec.	50ppm/°C	$69.00
	ADC-D	8, 10, 12 Bits	Bin	50 μsec.	50ppm/°C	$79-$129
	ADC-K	8, 10, 12 Bits	Bin	50 μsec.	30ppm/°C	$109-$139
	ADC-MA	10, 12 Bits	Bin	40 or 20 μsec.	30ppm/°C	$95-$145
GENERAL PURPOSE HIGH PERFORMANCE	ADC-L	8, 10, 12 Bits	Bin, BCD	12-20 μsec.	10ppm/°C	$135-$175
	ADC-M	8, 10, 12 Bits	Bin, BCD	4-13 μsec.	10ppm/°C	$229-$349
	ADC-149	14 Bits	Bin	50 μsec.	15ppm/°C	$239.00
HIGH SPEED	ADC-EH8B	8 Bits	Bin	4.0 or 2.0 μsec.	50ppm/°C	$85-$129
	ADC-EH10B	10 Bits	Bin	4.0 or 2.0 μsec.	40ppm/°C	$149-$189
	ADC-EH12B	12 Bits	Bin	8.0 or 4.0 μsec.	30ppm/°C	$169-$229
	ADC-N	10, 12 Bits	Bin	4.0 μsec.	20ppm/°C	$385-$485
	ADC-P	8, 10 Bits	Bin	2.0 μsec.	20ppm/°C	$420-$430
	ADC-H	4, 6, 8, 10 Bits	Bin	400 nsec.-1.0 μsec.	20ppm/°C	$545-$895
	ADC-G	8, 10 Bits	Bin	800 nsec.-1.0 μsec.	50ppm/°C	$249-$349
	ADC-VH	4, 6, 8 Bits	Bin	100-200 nsec.	50ppm/°C	$795-$895
	ADC-UH	4, 6, 8 Bits	Bin	40-100 nsec.	50ppm/°C	$895-$995
DUAL SLOPE	ADC-E	8, 10, 12 Bits	Bin, BCD	312 μsec.-5 msec.	50ppm/°C	$79-$99
	ADC-ER	8, 10, 12 Bits	Bin, BCD	43-77 msec.	35ppm/°C	$79-$99
LOW POWER CMOS	ADC-CM	8, 10, 12 Bits	Bin	350 μsec.	30ppm/°C	$249-$289

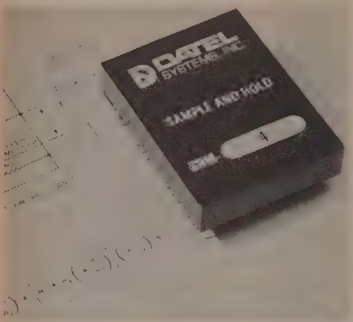
SAMPLE-HOLD MODULES



This broad line of sample and hold modules offers the user a wide range of price and performance parameters for data acquisition applications. Sample and holds are also useful in a number of other applications including waveform measurements, sample-data control systems, analog delay, and analog storage. In data conversion applications sample and holds are used to reduce the conversion uncertainty of a time varying signal. By taking a sample of the signal in a very short time the conversion can be performed over a larger time period while the sample and hold is in the hold mode. Datel's line of sample and holds has models which are optimized for different applications such as high speed, high accuracy, low power consumption, and simultaneous sampling. All units feature high linearity, low temperature coefficient, low hold mode feedthru, and low aperture delay times. The control inputs are DTL/TTL compatible with some units also CMOS compatible. All units have a built-in hold mode accuracy adjustment on the side of the module.

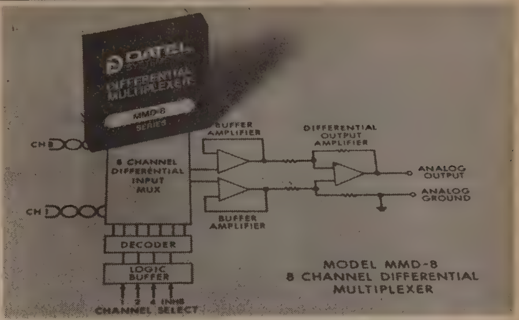
ANALOG MULTIPLEXERS



MODEL MMD-8
8 CHANNEL DIFFERENTIAL
MULTIPLEXER

This line of analog multiplexer modules offers a choice of operating features for data acquisition system applications. It includes 8 and 16 channel single ended models and an 8 channel differential model. All units use MOS-FET switches with high speed break-before-make switching and associated driver and logic circuitry. Channel selection is accomplished by parallel binary inputs which are DTL/TTL compatible on all models and also CMOS compatible on the MMD-8 and MM-16. Input and output voltage ranges are ±10 Volts on all models with a transfer accuracy of .01%. Channel sequence rate is 500 kHz on all units.

SPECIFICATIONS (25°C)	8 CHANNEL SINGLE ENDED MM-8	8 CHANNEL DIFFERENTIAL WITH OUTPUT BUFFER MMD-8	16 CHANNEL SINGLE ENDED WITH OUTPUT BUFFER MM-16

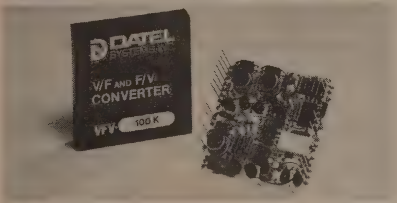
VOLTAGE TO FREQUENCY CONVERTERS



This new series of converters features universal characteristics permitting use as either a V/F or F/V converter by external pin connection. In addition, by pin connection, voltage inputs of 0 to +10V of 0 to −10V or current inputs of 0 to +1mA or 0 to −1mA may be chosen. The constant width output pulses may be selected to be positive going or negative going with DTL/TTL or CMOS compatibility. These converters use a charge balancing feedback method to generate an output pulse frequency proportional to input voltage or current. This is done with a nonlinearity of only ±.005% maximum for the VFV-10K and ±.05% maximum for the VFV-100K. The linearity holds all the way down to zero input voltage.

SPECIFICATIONS (25°C)	VFV-10K	VFV-100K
Input Voltage Range	0 to +10V or 0 to −10V	
Input Current Range	0 to 1 mA or 0 to −1 mA	
Input Impedance (voltage in)	10K ohms

MINIATURE PANEL-MOUNTING THERMAL PRINTER FOR DPM's

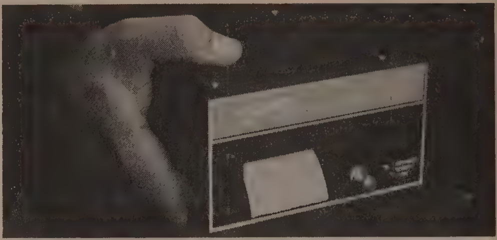
Although specifically designed to mate with Datel's fast growing line of digital panel meters, the DPP-7 is compatible with most BCD output A/D converters and can share the same clock and data bus lines. The unit utilizes a thickfilm thermal printhead to print up to seven columns of BCD input data at a rate of three lines per second maximum.

The DPP-7 accepts six full parallel, four-line BCD (1-2-4-8) digital inputs, and sign, from selectable positive or negative true TTL or DTL logic levels.

The DPP-7 is available as a 5VDC unit with 20W average power consumption (8A pk) and a 115 VAC version with 40W power consumption.

Characters are printed 0.155″ high in seven columns. Format may be sign, selectable left decimal point and then six digits or two identifier digits followed by sign and then four data digits. Print-out is on 1¾″ wide, thermal printing paper which is supplied in 150′ rolls. Only two parts, a linear solenoid and rotary clutch are used to advance the paper.

Front panel, external controls for the DPP-7 include a push-to-print switch which also permits continuous paper advance. In addition, there is an LED pilot lamp to indicate power status.



FEATURES

- Prints seven columns (six numeric and sign) up to 3 lines per second
- Accepts positive or negative true TTL full parallel BCD inputs
- Only 2 moving parts
- Long life, high reliability OEM design
- Last line visible immediately after printing
- 5.25″ W x 2.82″ H x 6.2″ D
- Uses a quiet, inkless 7-segment thermal printhead

SPECIFICATIONS

Print Characters	.155″ H, 7-segment, black on white paper, 10° slant
Maximum Printing Rate	3 lines per second
Print and Paper Advance Cycle	Approximately 330mS
Line Spacing	0.2 inch (5 mm)
Line Density	5 lines per inch
Line Capacity Per Roll	Approximately 9000 lines
Mean Print Head Life	3 million lines

DIGITAL DATA AND CONTROL LINES

(All lines are TTL/DTL logic levels and loading)

Inputs

Data (24 lines): Full parallel BCD
Change Data Polarity
Print and Advance Command: 2 μsec min.
Change Print Polarity
Leading Zero Suppress
Minus Sign
Plus Sign
Decimal Points (6 or 7 lines)
Test: Prints all 8's and decimal points
Change Busy Polarity
Blanked Character: Created by applying 1-1-1-1 to any digit location (may be hard-wired)

Output

Busy: True during print and advance cycle. Data may change 500 nsec after start of busy.
Out of Paper: Switch opening at end of paper roll.

Temperature Ranges

Operating: 0° to +40°C
Storage: −25°C to +60°C

Front Panel

Paper Quantity: Mechanical pointer rides paper roll and coupled to out of paper switch.
Print/Remote/Advance — 3 position toggle switch momentary in top or bottom positions:
Top: Advance (continuous @ 4 lines/sec)
Center: Enable Remote inputs
Bottom: Print 1 line and stop
Ext. inputs enabled

Power Supply

+5VDC: 4 Amps average, 8 Amps pk
AC: 100, 115 or 230VAC, 40 Watts, 47 to 440 Hz. Case Grounded

Connectors:

I/O: (2) 30-pin dual PC edge connectors
Power: ¼″ Spade terminals

Dimensions

Bezel: 5.25″ W x 2.82″ H (134mm x 72mm)
Cutout: 4.50″ W x 2.72″ H (115mm x 69mm)
Depth for connector or fuse clearance:
5V versions: 6.2″ (158mm)
AC versions: 8.7″ (221mm)

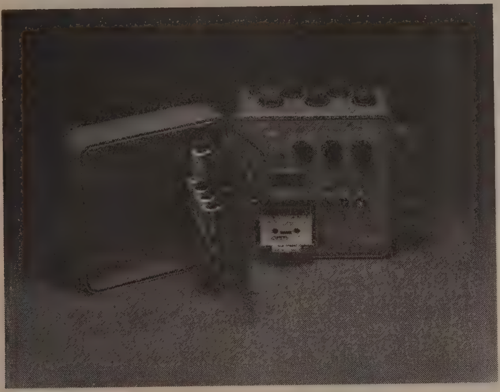
DATA LOGGING SYSTEMS

Datel Systems has a new approach to data logging . . . complete data logging systems in a module. Through the use of CMOS electronics and incremental digital cassette recorders, Datel Systems has significantly reduced the size, power drain and cost over other systems.

Applications for these new data logging modules include oceanography, pollution monitoring, meteorology, seismology and other remote data logging requirements. Datel's recording systems are also ideal for other scientific data acquisition uses, both in the laboratory and in the field.

Cassette readers are available which transcribe the digital data on the cassette to computer compatible media. These readers may be interfaced to produce ½" IBM tape or to teletype, data terminals, acoustic couplers or directly into the computer.

DL-2 — WEATHERPROOF, 64-CHANNEL CASSETTE DATA LOGGING SYSTEM



For remote recording or long term, unattended measurement of any variable, the battery powered DL-2 will record up to 64 channels of analog data on a digital tape cassette. Housed in a sealed, weatherproof, ruggedized metal case, the DL-2 will operate for more than a year on its internal lithium battery supply in temperatures from −20°C to +85°C.

Philips-type digital cassettes with 300′ of tape are used to record data in selectable scan intervals from one second to 30 hours. The number of channels to be scanned is preset on the front panel. In each scan a 40-bit clock word is recorded before each scan. The clock word contains a 36-bit one year digital clock derived from a CMOS oscillator having one-second resolution.

A complete system weighs 20 lbs., with batteries, and measures 12″ H. x 12″ W. x 10″ D. Depending on channel configuration (high level, low level or mixed), input ranges and coding and the type of internal power supply, the DL-2 is priced between $4000 - $5000.

DL-2T — PORTABLE, BATTERY POWERED, WEATHERPROOF TESTER/CALIBRATOR FOR DL-2

Permits on-site exercising of DL-2 and performs a self-check to ensure the accuracy of its tests.

LPS-16 — LOW POWER, CASSETTE DATA MONITORING SYSTEM

DATEL
RELEASE
PUSH

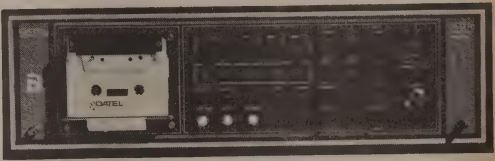
A complete package for recording 16 channel analog data and any number of 16 bit bytes of digital data in serial form. The analog data inputs can be sequentially or randomly multiplexed, converted into digital form, formatted and stored on a standard 300′ Philips tape cassette.

System LPS-16 utilizes CMOS logic throughout, thereby consuming negligible stand-by power (120 microwatts). Only during the actual analog to digital conversion and storage on tape is any appreciable power consumed (960 milliwatts). The system can thus be operated for long periods on battery with low average power.

The LPS-16 weighs only two pounds, exclusive of power source. The 4″ H. x 4½″ W. x 7½″ D. data logging system is priced between $1595 and $1695, depending upon the number of bits and coding, analog input and A/D output format.

CASSETTE READERS

DL-2R — DIGITAL CASSETTE READER AND COMPUTER INTERFACE FOR 64 CHANNEL DL-2 RECORDING SYSTEM



The DL-2R displays digital calendar clock, binary A/D data words, internal octal or external digital header words. Information recorded on tape, such as temperature, pressure, rainfall and wind velocity from external sensors may be transferred directly into a teletypewriter, ½″ tape, mainframe computer or minicomputer data buss using the DL-2R reader. The 19″ wide rack mount unit is priced from $3495 to $4195, depending upon the type of interface.

LPR-16 — CASSETTE TAPE READER/INTERFACE FOR 16 CHANNEL LPS-16 DATA MONITORING SYSTEM

Using the LPR-16, 16 channels of digitized analog data can be fed directly into a minicomputer or mainframe processor or ½″ tape. It will also simultaneously connect directly to a teletypewriter or RS-232C I/O device. The LPR-16 has two side-by-side interface card slots with identical pinout so that two interfaces can be simultaneously connected. The 19″ rack-mount unit is priced from $2095 to $2795, depending on the type of interface required.

CHECK THIS NEW ECTRON SYSTEM FOR HIGH SPEED DATA ACQUISITION

The 6000 series systems are complete signal processors in a compact, 7-inch high rack mounted package. Each channel has an individual low level amplifier followed by a high level multiplexer, and the system programmable amplifier, sample and hold, and A-D converter. 64-channels are contained within a single chassis and additional increments of 64-channels can be added in slave units. Four pre-amplifiers are packaged on each plug-in module allowing the number of channels within each chassis to be altered in increments of 4-channels.

The basic system is equipped with a 12 bit A-D converter and has a through put rate of 20,000 channels per second. Optionally it can be equipped with A-D converters with higher resolution and/or higher through put rates.

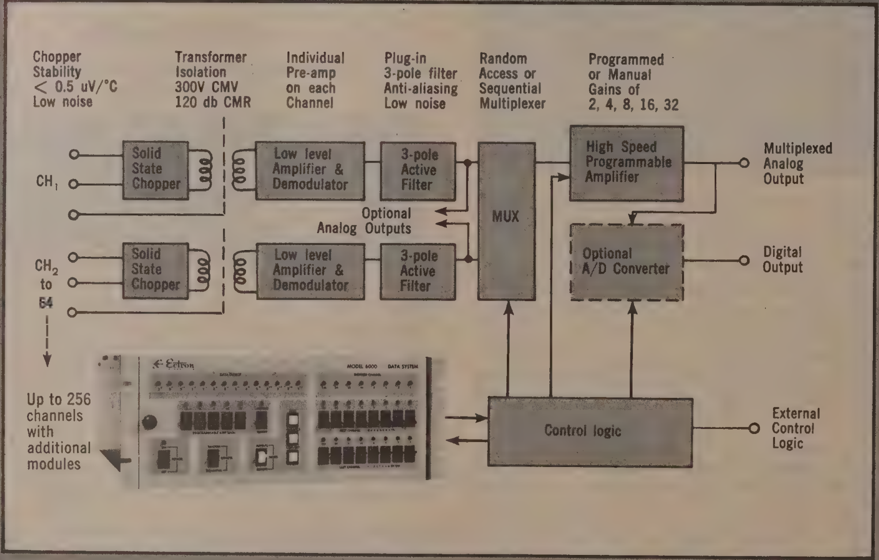
PERFORMANCE ADVANTAGES: With the chopper stabilized pre-amplifier, 1/F noise is very low and dc offset with temperature is less than 0.5 microvolts per °/C. Each channel is equipped with a plug-in three pole filter for anti-aliasing and low output noise. Since it follows the pre-amplifier, it filters both the noise picked up on the input lines and the noise generated by the pre-amplifier. With the optional transformer coupled input amplifier, common mode potentials up to 300 volts dc or peak ac can be accommodated and CMR is in excess of 120 db.

VERSATILITY: All functions and operating modes can be operated under direct computer control, or full manual operation is possible by means of front panel controls. In addition, it is possible to control some functions manually while leaving other selections to the computer.

6000 series systems are available as low level signal processors or can be supplied with complete signal conditioning capability for direct strain gage and thermocouple inputs. This includes strain gage excitation, bridge completion, bridge balance, remote calibration, and thermocouple reference junctions.

All internal circuitry is packaged on plug-in circuit boards which can be removed through the front of the instrument. In addition to convenient servicing, this allows access to optional pre-amplifier gain controls. Pre-amplifier gain can be controlled by a switch on each channel or a low cost plug-in resistor.

KEY FEATURES: • CMV 300 volts, CMR 120db • 0.5 microvolts zero stability • .01% Gain Stability • Plug-in filter • Choice of transformer or direct coupled input pre-amplifier • Choice of interface connectors • Random or sequential access



Chopper Stability < 0.5 uV/°C Low noise
Transformer Isolation 300V CMV 120 db CMR
Individual Pre-amp on each Channel
Plug-in 3-pole filter Anti-aliasing Low noise
Random Access or Sequential Multiplexer
Programmed or Manual Gains of 2, 4, 8, 16, 32
CH1
Solid State Chopper
Low level Amplifier & Demodulator

Model 264A-02 Remote Operation Badge Reader

Model 960A Card Reader with Model 80 Scanner

STATIC CARD READERS

- *22-column Badge and 80-column Tab Card Readers*
- *Choice of Wiring and Reset Configurations*
- *Interface Electronic Packages*

264-Bit Output Badge Reader, Model 264A, will read column 1 through 22 of a standard tab card (Media I) or a standard size CR60 plastic badge with Media I punching.

960-Bit Output Card Reader, Model 960A, will read 80 columns of a standard 80-column tab card (Media I).

Choice of output bussing combinations with diode isolation matrices is available for both the badge and card readers to reduce external wiring.

BRIEF SPECIFICATIONS, MODELS 264A, 960A READERS

CONTACTS: Form "A"; hole in card makes contact. Spacing per EIA-RS-292, Media I.
264A: 264 contacts. 12 rows x 22 columns.
960A: 960 contacts. 12 rows x 80 columns.
BADGE SIZE: 2.328 in. x 3.250 in. Thickness: 0.007 in to 0.035 in.
CARD SIZE: Standard Media I tab card. Thickness: 0.007 in to 0.015 in.

PRICES (single quantity):

264A Badge Reader	$220
960A Card Reader	$795

INDUSTRIAL CARD READERS

- *Reliable Performance in Rugged Environments*
- *Interposer Contacts for Error-Free Readings*

Proven success in industrial environments: applications include programmed control of batching and blending processes, automatic storage/retrival and conveyor systems, and automated test equipment, using high current contact closures.

Little maintenance is needed; the self-wiping interposer contact design eliminates periodic dissassembly or cleaning.

Sure, accurate readings result from using the interposer techniques. An interposer (switching mechanism post) slips through a hole in the card when the reader is actuated. Contacts are remote from the card, avoiding misreadings due to contaminants on the card often found in heavy industrial environments.

Additional choices are offered for manual and motor operation, and for form A (switch normally open) and form B (switch normally closed) switching. Blank and preprinted durable vinyl and mylar cards and card punches are available from Hickok.

Set/reject options offer electrical actuation for remote control or manual actuation for economy.

TTL-compatible electronic scanners provide all circuitry for 12-row output in parallel, column serial. The Model 22 Scanner, for the 264A Reader, and the Model 80 Scanner, for the 960A Reader, translate the punched card data into TTL-compatible interfaces. The Scanners have two operating modes: sequential and addressable (random column selection).

BRIEF SPECIFICATIONS, MODELS 22, 80 SCANNERS

OPERATING MODES: Sequential scan or addressable modes.
LOGIC LEVELS: TTL/DTL levels.
OUTPUTS: 12 data lines; ready; column control; deck position; address; overflow; enable.
INPUTS: 12 row lines; mode selection; inhibit; address; enable; advance; reset; eject (optional 5-volt control).
POWER REQUIREMENTS: 5 volts at 500 milliamperes.

PRICES:

Model 22 Scanner for 22-column 264A Badge Reader	$195
Model 80 Scanner for 80-column 960A Card Reader	$295

Digital to Analog Converters

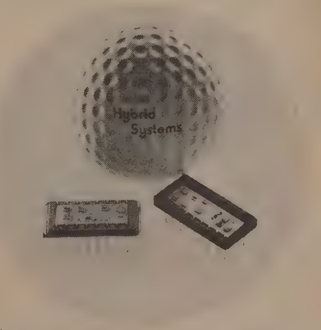
Hybrid Systems is a leading manufacture of D/A converters. Capability includes 8 thru 16 bits resolution; speeds to 50ns; voltage and current switching and tempco to 1PPM/°C. Fixed reference and multiplying D/A's are available in both discrete and thin film hybrid integrated circuit construction for commercial and MIL-STD-883 applications. Hermetically sealed active components and proprietary thin-film nichrome resistor ladder networks are used to assure high reliability and long term stability.

DAC372 Series

HYBRID SYSTEMS CORP.
D/A CONVERTER
DAC 372-12

The DAC372 Series is available in voltage output, high speed current output and high speed voltage output versions. All models have inputs of 12 bits, but are internally adjusted for linearities that conform to resolutions from 8 to 12 bits. Either bipolar 2's complement or unipolar binary operation may be selected by pin interconnection.

DAC345I/346V Series



The DAC345I and DAC346V Series are fully hybridized DIP compatible D/A converters. Utilizing matched monolithic quad current switches and highly stable thin film nichrome resistor networks, these devices maintain accuracy over a wide range of temperature and time. Dynamic laser trimming assures true 12 bit linearity and monotonicity.

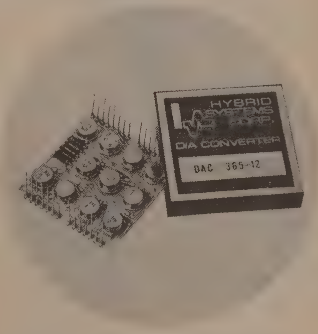
Hybrid Systems is a leading manufacture of D/A converters. Capability includes 8 thru 16 bits resolution; speeds to 50ns; voltage and current switching and tempco to 1PPM/°C. Fixed reference and multiplying D/A's are available in both discrete and thin film hybrid integrated circuit construction for commercial and MIL-STD-883 applications. Hermetically sealed active components and proprietary thin-film nichrome resistor ladder networks are used to assure high reliability and long term stability.

DAC375 Series

HYBRID SYSTEMS CORP.
D/A CONVERTER
DAC 375-12

DAC375 Series requires only 60mW of input power to achieve complete, accurate 12 bit conversion. All models provide 12 bit resolution with linearity of 8, 10 and 12 bits or 3 decade BCD set by precise factory calibration within ±1/2 LSB. All models feature a built-in temperature-compensated reference.

DAC365 Series



The DAC365 Series is a family of ultra-stable 4 quadrant multiplying D/A converters. Advanced hybrid circuit techniques permit these devices to perform accurately over the full MIL temperature range of −55°C to +125°C. All models contain a stable internal reference to accommodate applications that do not require the multiplying feature.

Analog to Digital Converters

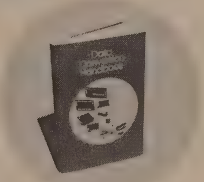
Hybrid Systems manufactures a complete selection of A/D converters with both low cost and superior performance characteristics. Advanced thin film microelectronic techniques and hermetically sealed active components provides superior linearity tempco. Our proprietary thin-film nichrome resistor ladder networks assure far superior tracking and matching characteristics. Capability includes 8 to 12 bits; speeds to 100ns/bit; linearity drift of 2PPM/°C; and successive approximation, digital ramp and dual slope models. CMOS models are also available.

ADC-12QZ

HYBRID SYSTEMS CORP.
ADC-12QZ
A/D CONVERTER

Hybrid Systems low cost, general purpose ADC-12QZ is a direct replacement for Analog Devices' ADC-12 QZ analog-to digital converter. Proprietary precision thin-film nichrome resistor ladder networks are combined with monolithic quad current switches to produce superior tracking and matching characteristics. As a result, Hybrid Systems ADC-12QZ has no missing codes between 0°C and 70°C and maintains a maximum ±1/2LSB linearity error at 25°C.

176 Page Guide to Data Conversion



The Data Conversion Handbook is offered as a guide to design engineers and others who specify and/or use data acquisition products. It is readable, informative . . . because it's written by practitioners. It defines the qualities, specifications and techniques that combine to give D/A and A/D converters their special character.

Chapters include **Digital-To-Analog Converters • Analog-To-Digital Converters • Sample/Holds • Analog Multiplexers / Codes**

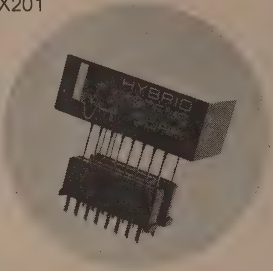
Data Conversion Modules

Multiplexers

- Plugs Into IC Socket
- 8 Channel MOSFET
- ±10 Volt Signal Range
- 250Ω ON Resistance

The MUX201 provides accuracy and high speed in a small package. This 8 channel MOSFET multiplexer will plug into a single 16 pin dual-in-line socket. Units can be combined to provide single ended or differential channels.

MUX201

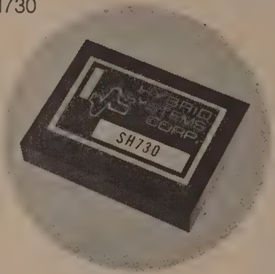


Sample-Holds

- Up To 12 Bit Linearity
- Acquisition Speeds to 200ns
- Aperture Uncertainty to 250ps
- 10mV/s Droop Time

The SH730 sample-hold meets the speed and accuracy requirements of most 12 bit data acquisition systems. The unit incorporates a very fast settling operational amplifier which can be programmed for gains up to 10. The SH730 is complete and ready to use and features an internal high quality holding capacitor. The model is one of a series of economical, high performance sample-holds.

SH730



Operational Amplifiers

- FET Input
- Instrumentation
- Fast Settling, Fast Slewing

A complete series of high performance amplifiers, ranging from FET fast settling operational amplifiers to programmable high accuracy instrumentation types. All units are short circuit protected.

SYSTEMS
CORP.
INSTRUMENTATION
AMPLIFIER
A910A

Deltaverta™ Systems Modules

- Low Cost
- High Accuracy (0.01%)
- CMOS Circuitry
- Multiplexing Flexibility
- System Compatability

The Deltaverta series of system modules are complete and ready to connect. They convert single or multi-channel analog information to a digital signal suitable for transmission over a single line; the original analog data is then reconstructed or converted to digital form at a remote location. These are versatile, low-power, high accuracy, standard modules and subassemblies providing superior performance at prices substantially below any other presently available technique. The Deltaverta product series includes all the modules necessary for the basic functions of data acquisition, transmission, retrieval, and encoding.

8 Channel Multiplex Subassembly

DDC DATA DEVICES DDC DATA DEVICES DDC DATA DEVICES DDC

If you're in data conversion instrumentation ... this valuable reference book is yours absolutely FREE!

ILC DATA DEVICE CORPORATION
DDC
1975-6

DDC's consistent activity in product development provides you with the widest selection of data conversion devices in the industry. This wide selection is fully described in our new catalog—complete with performance characterization, technical specifications and applications notes. With DDC products you can build many different data conversion systems with high performance discrete, hybrid and monolithic...multiplexers...sample-and-holds...A/D and D/A converters...S/D and D/S converters...discrete, hybrid and monolithic, fast slewing and fast settling amplifiers, log/antilog amplifiers and many more.

164 pages of valuable technical data

Look to DDC too, for the finest in lab-quality instrumentation including synchro/resolver angle indicators (for single and multispeed), synchro/resolver angle simulators and shaft angle encoders. Full performance characteristics and specifications are given in our catalog which is yours for the asking. DDC synchro instruments are available in a wide selection of configurations in desk top and half-rack widths 1-3/4" to 3-1/4" high for easy mounting. Accuracies to 0.01°, with bright LED segment display and all solid state.

For detailed information write today for free catalog.

A/D AND D/A CONVERTERS

High speed analog to digital

- Resolution to 12 binary bits
- Accuracies to 0.0125%
- Industrial & Military grades

Video Analog to Digital

- Accuracy/resolution to 9 bits
- Word rates to 100 MHz

Digital to Analog

- Resolution to 14 bits
- Accuracies to 0.0031%
- Settling times to 50 nsecs
- Output currents to 100mA
- Multiplying and universal reference DAC models

SYNCHRO CONVERTERS

Synchro/Resolver-to-Digital

- Up to 20 bit resolution
- Up to ±1' accuracy
- Multispeed in most ratios

Digital-to-Synchro/Resolver

- Up to 16 bit resolution
- Up to ±1' accuracy

Synchro/DC and Sin Cos DC

- 0.1° accuracy, 0.1/°C max drift
- Self calibrating
- Choice of linear range
- Compatibility with simulators

HYBRID MULTIPLEXED SYNCHRO TO DIGITAL CONVERTERS

- Lowest power, smallest size, highest performance converters available
- 100 usec conversion
- To 14 bit resolution
- Accuracy to ±5.3'
- Available in NAFI and SHP module configurations

HYBRID TRACKING S/D AND D/S CONVERTERS

- Lowest power, smallest size, highest performance converters available
- To 20 bits binary
- Accuracy to ±2'
- Full accuracy to 0-1440°/sec

Operating temperature range for our hybrids is —55° to +105°C.

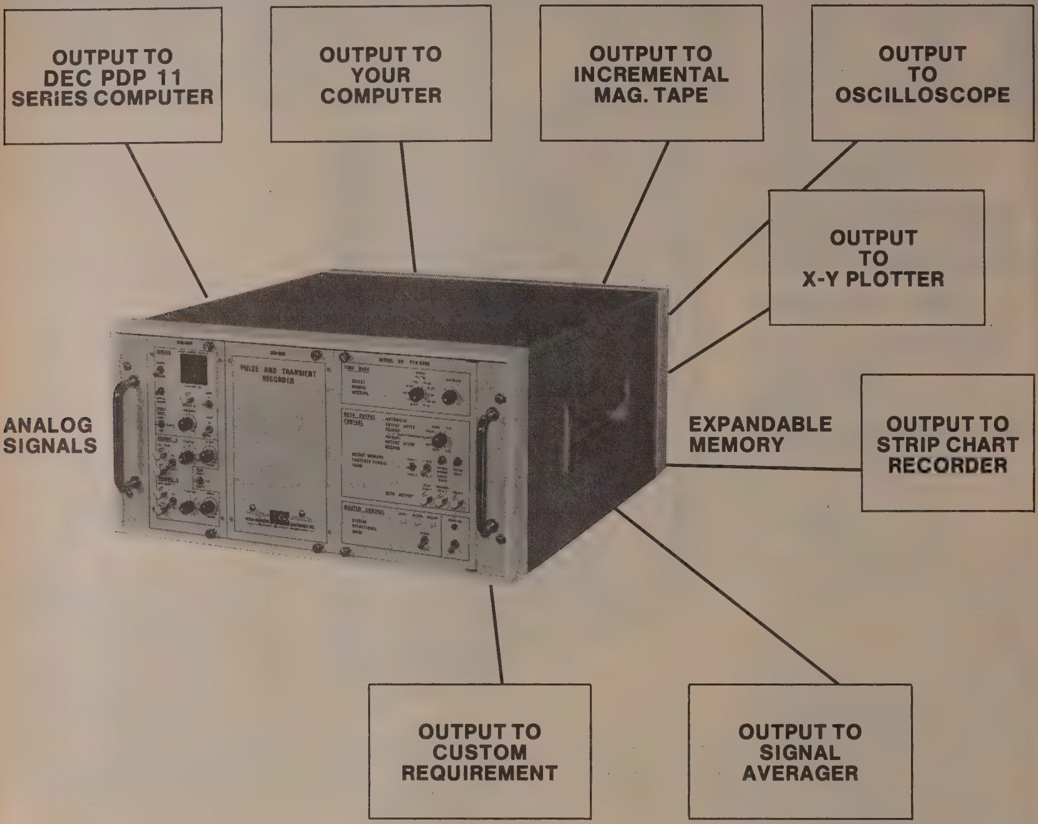
TRANSIENT ANALYZERS & SIGNAL PROCESSING SYSTEMS



OUTPUT TO DEC PDP 11 SERIES COMPUTER
OUTPUT TO YOUR COMPUTER
OUTPUT TO INCREMENTAL MAG. TAPE
OUTPUT TO OSCILLOSCOPE
OUTPUT TO X-Y PLOTTER
ANALOG SIGNALS
EXPANDABLE MEMORY
OUTPUT TO STRIP CHART RECORDER
OUTPUT TO CUSTOM REQUIREMENT
OUTPUT TO SIGNAL AVERAGER
PULSE AND TRANSIENT RECORDER

FEATURES

- Sampling up to 100 MHz with 8-bit resolution
- Interfaces with I/O of all Computers
- Expandable memory blocks of 2816 words
- Records transient waveforms and repetitive signals
- Easily interfaced to TTY, printer, or magnetic tapes
- Complete remote of front-panel controls
- Analog output for oscilloscope, plotter and strip chart recorder
- Sampling interval from 10 nanoseconds to 50 seconds
- X vs Y recording
- Variable pretrigger mode stores data up to total memory capacity for baseline and leading edge of signal analysis

APPLICATIONS

- Laser Processing
- Nuclear Applications
- Medical Applications
- Process Control
- Radar Systems
- Spectral Analysis
- Chemical Analysis
- Electronic and Electrical
- Accelerated Food Processing
- Pollution Monitoring
- X-ray and Gamma Ray Detection
- Alpha, Beta Particle Recording
- Acoustical Analysis

INTER—COMPUTER ELECTRONICS

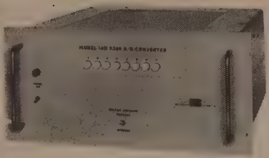
HIGH SPEED ANALOG-TO-DIGITAL SYSTEMS

OUTSTANDING FEATURES

- DATA CONVERSION RATES UP TO 400 MEGABITS
- APERTURE TIME ON THE ORDER OF TENTHS OF NANOSECONDS
- WORD SIZES RANGING FROM 4 TO 12 BITS
- WORD CONVERSION RATES FROM 500 kHz TO 100 MHz
- INPUT BANDWIDTH UP TO 100 MHz



GENERAL DESCRIPTION

Inter-Computer Electronics' Analog-to-Digital Converter Systems bring digital signal processing to areas never before thought possible. They are able to link up real world wide bandwidth signals, and translate them into a digital language for the processing requirements of high speed digital computers.

The ultra-high speeds of Inter-Computer Electronics' converters enable them to process digital signals in radar, television, X-ray analyses in multi-channel wideband communication systems and control systems. They offer the capability to convert and communicate digital signals in the speed range of the fourth generation solid-state technology, keeping in step with the computational power of the computer, providing fast and accurate signal processing.

HIGH SPEED ANALOG-TO-DIGITAL MODULES

OUTSTANDING FEATURES

- A/D Encoding Times—4 Nanoseconds/Bit
- Resolution—4 to 12 Bits
- Fastest Encoders Available

The high-speed and ultra high-speed analog-to-digital encoders offer new opportunities for digital signal processing. The modules employ an improved version of the successive approximation, subranging and parallel method of encoding. The modules are available in a format that permits mounting on a printed circuit card or in a shielded case suitable for system use.

Series N modules are a new line of encoder modules using nuclear instrumentation module (NIM) packaging, adding a complete modular capability in configuring the system of your choice.

The design of these converters incorporates all mechanical features for reliable operation at ultra-high speed. Necessary signal terminations, ground planes, and case shieldings are provided for full compatibility with ICE sample and hold modules and D to A converters.

SAMPLE AND HOLD MODULES

Inter-Computer Electronics, sample and hold modules contain an ultra fast analog switch, holding capacitors, and input and output buffer amplifiers. This is a true sample and hold, and is used with Inter-Computer Electronics, high-speed analog-to-digital encoders and converters.

All sample and hold modules are available with long droop capability where a trade-off between long-term hold and repetition rate can be made.

Upon external command, the analog switch is closed and the charging capacitors charged to final value. After this acquisition interval, the charging capacitor is disconnected from the input and holds the value until the next sample pulse.

The sample and hold amplifier has a wide range of applications with analog-to-digital converters, data acquistion systems and transient analysis.

The unit is packaged in a shielded case. Appropriate signal terminations, ground planes and layout insure accurate operation in the most severe signal environments.

MAINFRAME SUBSYSTEMS

MAINFRAMES are integrated module subsystems optimized by the selection of functions, resolutions, and speeds for the specifics of each application.

Mainframe subsystems are available as module kits with application instructions for transfer to user PC boards or planes.

Mainframes can accept, convert, display, and deliver angle data in a variety of forms including Binary, Binary Angle, Incremental Angle, Synchro, Resolver, Dual Speed Synchro or Encoder, Scaled BCD Angle, Radar Mils, Degrees-Minutes-Seconds, and Distance in any unit of linear measure.

Typical Mainframes are outlined below. Contact Interface for more information.

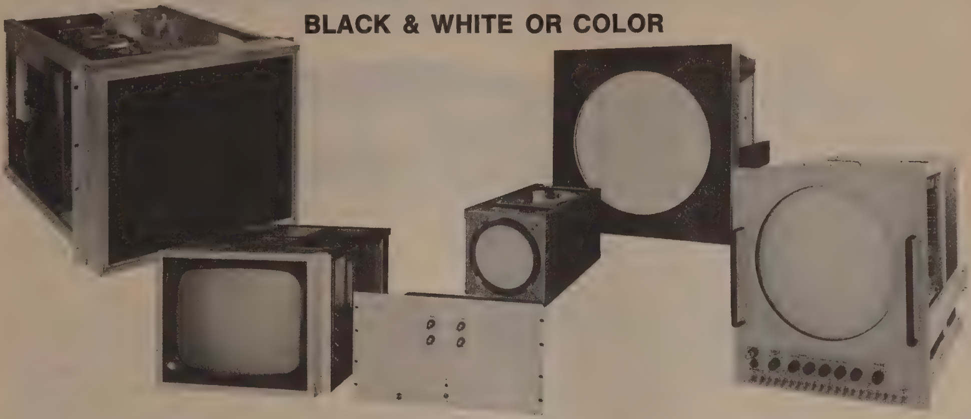
COMPUTER GRAPHICS DISPLAYS

BLACK & WHITE OR COLOR



KRATOS is the largest independent manufacturer of computer graphics displays in the United States. Years of engineering effort have resulted in a complete line of units that perform exceptionally well even under adverse conditions. Applications include:

..... Computer-processed radar displays. Available with digitally-generated rotating sweeps, range rings, azimuth heading marker, and special video processing.

..... Video graphics systems for processor-selected raster or graphics displays requiring only XYZ graphics signals, EIA video, and one select line.

..... Simulated cockpit displays with remote CRT featuring minimum panel space and optional brightness to 1000 foot-lamberts.

Multicolor beam penetration displays up to 25-inch diagonal and providing high resolution color graphics are also in production.

HARD COPIERS

Introduction

The model 7000 series Graphics Hard Copiers give you permanent, 8½x11-inch paper copies of information generated by an interactive graphics terminal. The copiers use an electrostatic printer not requiring photosensitive paper, an optics system, and a self-contained X, Y, Z display CRT. The copiers, packaged in attractive cabinets, can operate up to 400 feet from the display controller.

Features of the copiers include outstanding reproduction quality, ease of operation, low maintenance, and lower cost than comparable copiers.

Copier Operation

A copy, under either manual or program control, is made by exposing a coated paper to a photoconductive plate upon which an image is projected. Immediately after this three-second exposure cycle, the CRT image may be changed without affecting the remainder of the copying cycle. This cycle is completed by treating the exposed paper with a toner to make the image visible. The complete copying cycle takes seventeen seconds.

Operator maintenance requires replacing paper rolls (each roll makes 500, 8½ x 11-inch copies), and adding toner after every 250 copies.

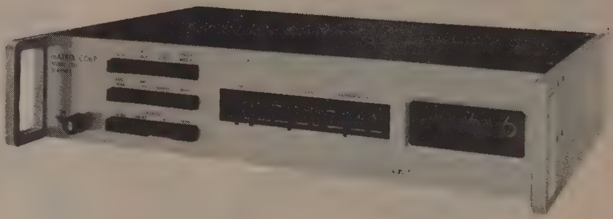
Thermocouple and General Instrumentation SCANNERS by MATRIX CORPORATION

General Instrumentation MODEL 1701 SCANNER

- **Random access. Channels controlled by a BCD input to allow programming by external source such as computer.**
- **Sequential scanning with end point selection by front panel digital switches.**



GENERAL: The BCD input is compatible with standard TTL logic. The unit contains BCD output for use on auxiliary equipment. Switches are available in multiples of 10 up to 100 channels in a 3½" cabinet.

CAPACITY: 10 to 100 channels are available in the 3½" master. Slave units with 10 to 200 channels in 3½" cabinets allow expansion to 1000 channels.

SCAN RATE: The scan rate may be as fast as 5 msecs.

INPUT: 1. Level — Standard BCD TTL logic. True equals +5 volts and false equals 0 to +0.5 volts. Unused inputs must have a false level or be terminated in 500 ohms max. 2. BCD enable — A false signal must be applied to enable the input data.

CHANNEL READOUT: Neon numerical indicator lights are provided for a visual indication of the channel selected.

CONTACT RATINGS: 500 volts maximum between conductor and chassis, 350 volts maximum between conductors. Current should not exceed 100 ma for maximum life.

OPTIONS:

A. Manual Digital Switch — The switch can manually select any desired channel from the front panel.

B. Sequential Scan — 1. Advance: Application of a true level will cause the scanner to advance one channel.

2. Reset: Application of a true level will hold the scanner in reset (000) position until true level is removed. Short or open circuit is "false." Positive 5V is true. Input impedance is 10K ohms. 3. Stop or Ctr. Disable: Application of a true level will disenable the advance input or stop any external clock inputs. A false level is required to allow sequential scanning.

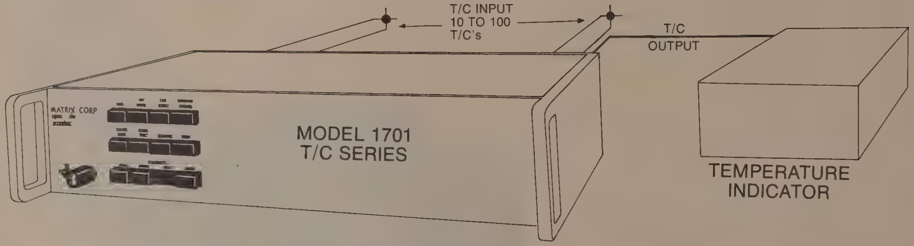
C. Sequential Scan with End Point Selection — Two digital switches are provided on the front panel to manually select the start and the stop channel for sequential scanning.

D. Int. Clock — 1. Rate: Continuously variable from .01 to 10 seconds per channel. 2. Single/Recycle: A front panel switch allows a single scan of all switches or continuous scanning of all switches. 3. Internal/External: Front panel switch selects the internal clock or an external clock input. 4. Start Input: Application of true level at the start input will initiate a scan of all switches only when the scanner is in the 000 condition.

DIMENSIONS: 3½" high x 17" wide x 10" deep.

LITERATURE: Write for Bulletin RS-71.

Thermocouple Scanner MODEL 1701 T/C SERIES



The T/C Series has all the functions of the basic 1701 except it is designed for thermocouple instrumentation. Thermocouples may be connected directly to the scanner. Ice bath, lag boxes or cold junction compensation are NOT REQUIRED, other than for the thermocouple indicator connected to the scanner output. Scanner controls and temperature indicator may be located remotely from the scanner. This reduces the bulk of the thermocouple wiring associated with chemical plant, refineries and similar industrial installations.

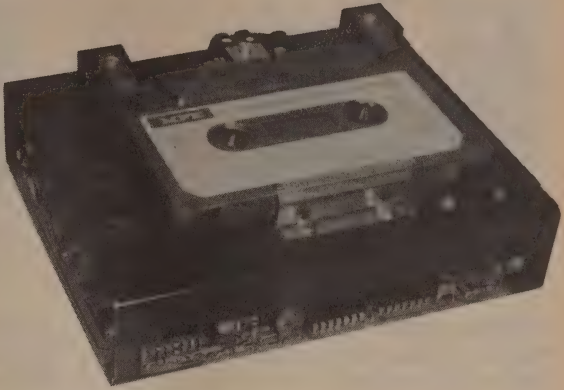
DIGITAL CASSETTE TAPE TRANSPORTS

MODEL 250B

$325.00 EACH IN 100 PIECE QUANTITIES

FEATURES

- Two moving parts
- 15,000 hour MTBF
- Highest data transfer rate
- Widest speed range
- Low power
- Constant tape speed
- Constant tape tension
- Easily interfaced to TTL or DTL logic
- Guaranteed cassette interchangeability
- Error rate less than 1×10^{-7}
- Read-after-write head
- ANSI/ECMA compatible



SPECIFICATIONS

CASSETTE

Any cassette which conforms to the ANSI, ECMA, or ISO standard and with a 1600 FCI clock track on track #2.

MODES OF OPERATION

Continuous.
Incremental (30 increments per second maximum).

RECORDING DENSITY

Up to 1600 FCI.

DATA TRANSFER RATE

Up to 32,000 bits/second standard.

RECORDING METHOD

Single track, bit serial, phase encoded ANSI/ECMA compatible.

TAPE SPEED

Electronically adjustable by user to any speed (with infinite resolution).

*Read/Write:	5-40 ips	(17.8-101.6 cm/sec)
Search:	40-80 ips	(101.6-203.2 cm/sec)
Fast Wind:	80-120 ips	(203.2-304.8 cm/sec)

(less than 30 seconds rewind for 282 feet of tape)

* Lower speed options available.

SPEED CONTROL

Long term speed variation (end to end) < ±1%.
Short term speed variation (bit to bit "jitter") < ±3%.

INTER-RECORD GAP

0.7 inches minimum at 10 inches per second (ANSI Standard), (1.78 centimeters minimum at 25.4 centimeters per second).

CASSETTE STORAGE CAPACITY

2.88×10^6 bits per cassette maximum.

POWER REQUIREMENTS

	Voltage	Standby	Running	Peak (10 msec)
Servo	+5 ±5%	175 mA	600 mA	700 mA (start)
Logic	+5 ±5%	250 mA	260 mA (write)	
Amplifiers	−5 ±5%	230 mA	200 mA	500 mA (stop)

START/STOP PERFORMANCE

Speed: Inches per second)	10	(Proportional at other speeds)
(Centimeters per second)	(25.4)	
Start (milliseconds)	50	
Stop (milliseconds)	30	

(Start time defined as the time from no tape motion to within the short term speed specification.)
(Stop time defined as the time from full speed until tape motion stops.)

INTERFACE

Standard TTL levels.

INTERFACE LINES TO MODEL 250B

Forward Go • Reverse Go • Speed Control One Shot • Reset • Data Input Lines (2) • Power Lines (3)

INTERFACE LINES FROM MODEL 250B

Data Output Lines (3) • Speed Control Clock Track • Cassette Loaded • Write Permit • End of Tape/Beginning of Tape • Busy

DIMENSIONS

With cover — Length 5.92″ x Width 4.85″ x Height 3.12″ (15.04 cm x 12.32 cm x 7.92 cm). Without cover — Length 5.46″ x Width 4.39″ x Height 2.42″ (13.87 cm x 11.15 cm x 6.15 cm).

WEIGHT

Without cover — 1.6 lbs (0.7 Kg). With cover — 2.3 lbs (1 Kg).

ENVIRONMENT

The environmental limits are for the Model 250B transport only. Actual limits depend on the magnetic tape used in the system.

Humidity:

Storage: 0% to 95%, without condensation.
Operating: 10% to 95%, without condensation.

Temperature:

Storage: −55°C to +85°C.
Operating: 0°C to +55°C.

MOUNTING ATTITUDE

No restriction, any attitude.

RECORDING DENSITY

Up to 1600 FCI (flux changes per inch).

Tape Printer Mechanism, Base Price	**$104.00**
Add for Each Active Column	**8.00**

MODELS RP12E and RP6E

Tape Printer with Interface and Drive Electronics	**$240.00**
Add for Each Active Column	**25.00**

CONSULT FACTORY FOR AVAILABLE OPTIONS

SPECIFICATIONS

DATA INPUTS

1-2-4-8 parallel entry BCD, self sourcing, TTL/DTL compatible.

Input Logic Levels: Positive true logic standard "O" state < .8 V. source Z < 200 Ω; "1" state is > 2.5 V and < 5.5 V.

Negative True Logic Inputs: Optional.

CONTROL INPUTS

Print Command: Standard active high. Changes from logic "0" state to logic "1" state. Pulse width 1 microsecond minimum duration direct coupled. Source Z < 40 KΩ to 5 VDC ±5%.

Print Command: Active Low (self sourcing) Available at the rear edge connector. Pulse width 1 microsecond minimum duration direct coupled.

Fast Paper/Ticket Advance: Grounding of rear terminal pin causes paper or ticket to advance at a rate of 13 to 19 lines/second. The feed rate is a direct function of line voltage.

One Line Paper/Ticket Advance: To advance one line without printing present an active low signal of 1 to 8,000 microseconds duration. This is useful to space groups of data or to manually locate a pre-printed parameter and print in front of it on the ticket. If a manual 1 line advance is desired, select option F — operator's devices. A short stroke on the paper feed push button advances 1 line without printout and without a complete drum rotation. The data hold signal will change state after each line advance in the above mode. Single line advance commands must be spaced at least 140 milliseconds apart to allow for the paper to advance. When required, it is possible to count each and every line indexed for positioning the ticket in front of a pre-printed parameter by counting each change of state in the data hold signal. This counting function is not supplied.

PRINTER OUTPUTS

Data Hold Signal: Active Low Standard. Changes from "1" state to "0" state upon receipt of print command or paper/ticket advance command. Automatic return to "1" state upon completion of print cycle or paper/ticket advance step. Open collector (self sourcing).

Data Hold Signal: Active High. Open collector (self sourcing) available on rear edge connector.

Busy/Ready Signal: Use data hold signal for true printer busy/ready feedback.

Ticket Latched Feedback: Models TK11E, and TK5E only. Active low and active high open collector with internal pull-up resistor available on rear edge connector. Change of state upon contact of rear microswitch by leading edge of ticket. When ticket exits past the front microswitch, the signal reverts to its normal state. This signal is used when a totally automatic closed loop operation of the printer is desirable, such as a microprocessor interface. The operator simply inserts the ticket to the point where an optional pilot lamp is turned "on". This lamp is controlled by the ticket latched feedback signal, see option F — operator's devices. From that point on, the microprocessor advances the ticket and commands printouts exactly on pre-printed or pre-assigned spaces on the ticket.

ELECTRICAL SPECIFICATIONS

Print Rate: This is a function of line voltage and of the number of printed characters during one complete drum rotation.

Duty Cycle: Continuous duty 100% at 1 line/second or slower. Intermittent duty 25%, (150 consecutive lines maximum) for faster than 1 line/second print rate.

Column Suppression: Positive true model — all inputs high; negative true model — ground all four inputs.

Overprinting: Change from logic "1" state to logic "0" state — active low. "0" > 2.4 V and < 15 V, "1" < .8 V. Sink < 1 ma (self sourcing). Active high is available as an option. Specify drum position 11 or 12, as required. Maximum number of overprints: Model TK5E: 6 each, Model RP6E: 6 each, Model TK11E: 12 each, Model RP12E: 12 each. Ten overprints maximum per drum position 11 or 12.

CONSULT FACTORY FOR AVAILABLE OPTIONS

SPECIFICATIONS (continued)

Power Inputs

10.5 - 14.5 VDC, 12 VDC nominal
90 - 110 VAC 50/60 Hz, 100 VAC nominal ±10%
105 - 129 VAC 50/60 Hz, 117 VAC nominal ±10%
198 - 247 VAC 50/60 Hz, 220 VAC nominal ±10%
210 - 257 VAC 50/60 Hz, 240 VAC nominal ±10%

With the standard OEM units, a power transformer is supplied having taps with lugs for all the above voltages. The exact voltage required must be specified — 12″ color coded leads will be supplied for that voltage, all other lugs will have shrink sleeving. For 12 VDC nominal input voltage 10.5-14.5 VDC range bypass the transformer. An AMP connector is provided for unregulated 12 VDC input.

POWER CONSUMPTION

The peak power required to drive the complete printer with its interface and drive electronics is 5 Amps at 12 VDC, or 60 VA. For those OEM's who buy our mechanism and design their own interface and drive electronics, the following individual peak power requirement chart is useful. Bear in mind that we do not actuate more than one solenoid at a given time.

Function	Peak Current	Voltage	Maximum Duration
Each Print Solenoid	3.6 Amps	12 VDC	17 msec.
Drum Advance Solenoid Actuation	3.6 Amps	12 VDC	17 msec.
One Complete Drum Step			51 msec.
Ticket/Paper Advance Solenoid Actuation	3.6 Amps	12 VDC	17 msec.
One Complete Ticket/Paper Advance Step			51 msec.
Ticket Latch Solenoid Actuation	3.6 Amps	12 VDC	7-10 sec.
Quiescent (Inactive) Power	1.0 Amp	5 VDC	During "Power On"

OPERATING ENVIRONMENT
(mechanical unit only as applicable)

Temperature: OEM models TKE and RPE maximum still air temperature inside customer enclosure 0 to 50°C. Case models ambient temperature of still air outside case 0 to 35°C.

Humidity: 5 to 95% without condensation.

Mounting Position: From horizontal 0 to 90°.

MECHANICAL SPECIFICATIONS

Characters: Standard — .110″ high x .100″ wide., .010″ face, Gorton condensed .110″ high x .065″ wide x .010″ face. Do not combine standard and Gorton condensed characters on the same printer.

Columns: RP6E 1 to 6 columns, RP12E 1 to 12 columns, TK5E 1 to 5 columns, TK11E 1 to 11 columns.

Column Spacing: .275″ between column centers. For ticket printers ask for Ticket Printout Mechanical Outline Drawing.

Line Spacing: Nominal .215″ from the top of each line to the next.

Maximum Variation in Column Spacing: ±.045″ from center line to center line of each wheel.

Maximum Variation in Line Spacing: ±.050 for any one of 20 indexed lines. The customer selects the appropriate line registration tolerance for the exact number of lines to be indexed from the Line Registration Error Curve.

Ticket Insertion Depth: Nominal 6.835″ from leading edge of ticket to top of first line printed. Continuously adjustable on ticket printer from 6.84″ to 3.38″. Specify if non-standard insertion depth calibration is required.

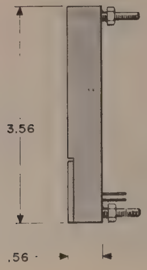
Paper Tape: RP6E 1.68″ x 3.0″ Dia pressure sensitive (PSD-6) 9000 prints/roll. RP12E 3.36″ x 3.0″ Dia pressure sensitive (PSD-12) 9000 prints/roll.

Ticket Dimensions: TK5E or TK11E — 3.250″ wide ±1/64″, 7.875″ long ±1/64″ per MFE Drawing #90062001. TAB card plus 2 copies standard.

Weight: 7 lbs. with AC electronics but less instrument case.

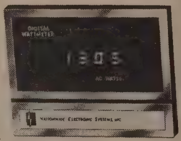
NATIONWIDE ELECTRONIC SYSTEMS, Inc.

First in Electronics through Innovation



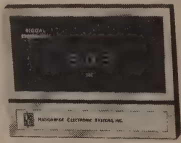
SLIMLINE . . . the *THIN* digital panel instruments

ELECTRICAL MEASUREMENT



Rugged, high-precision instruments for measuring every type of electrical parameter. 3½ digit (1999 count)and 3¾ digit (3100 count) units are available; parallel BCD and all control lines: **VOLTMETERS**, AC & DC millivolts to megavolts, from $199; **AMMETERS** (AC & DC) for scientific laboratories or electrical switchyards, from $208; **OHMMETERS**, electrical resistance as fine as 0.001 ohm; 1.999Ω to 19MΩ, from $230; **WATTMETERS**, AC & DC, display true watts; both high and low frequencies, from only $250; **TRI-SCALE METERS** measure volts, amps, and watts, from $300; **FREQUENCY METERS** accurately measure low and high frequencies from $280; and the **CUSTOM METER** is available with special scaling, linearization, and offsetting to display virtually any electrical signal in the units of measure you want, from $300.

TIME MEASUREMENT



A complete collection of accurate instruments for keeping real or elapsed time. The bright .55″PH light-emitting diode displays are easy to read; remote control inputs and parallel BCD outputs. Their record of performance has made Slimline timing instruments a standard in the industry: **CLOCKS** in 12-hour (AM/PM) or 24-hour (military) format for all types of timekeeping applications; 14 models, including decimal formats, from $204; **CALENDARS** keep the date in month/day or day-of-year (Julian) format; both models are fully automatic, ideal companions for the Slimline clock, from $199; **COUNT-DOWN STOPWATCHES** can be preset to a desired time and will then count down to zero, from $212; and the widest selection of **STOPWATCHES** available anywhere; 59 different models to measure from microseconds to hours, from $200.

PHYSICAL MEASUREMENT

DIGITAL THERMOMETER

A complete selection of instruments to measure all types of physical dimensions and phenomena. If you don't see exactly what you need, our **CUSTOM METER** (listed under Electrical Measurement) will do the job for you. **RTD THERMOMETERS** measure temperature with superb accuracy in either °C or °F with resolution as fine as 0.1°, from $325; **THERMOCOUPLE THERMOMETERS** for all types of industrial temperature measurement, from only $350; **DUAL-SCALE THERMOMETERS** for measuring in either °C or °F; take your pick with the flip of a switch, from only $350; **COUNTERS**, both up & up/down models which accept a wide variety of inputs, including quadrature; available with variable threshold inputs and many other features, from $186; **RELATIVE HUMIDITY METERS** to measure and display humidity automatically, electrically, from $375; **BAROMETERS** to accurately measure atmospheric pressure, from $350; **PRESSURE METERS** for measuring gas or fluid pressures, from $325; **FORCE METERS** for measuring tension or compression, from $325; **VACUUM METERS** to measure and display amount of vacuum in a system, from $350.

DISPLAY & CONTROL

COMPARATOR/CONTROLLER
HIGH
LOW

A wide selection of instruments for remote readout of information, and for the automatic control of equipment based on readings made by measuring instruments: **COMPARATOR/CONTROLLERS** compare data from an instrument against manual preset switches (built in) and activate external equipment when limits are equaled or exceeded; extremely versatile, great for alarm and automation systems, from $122; **REMOTE DISPLAYS** for extra readouts from any Slimline instrument; also for visual display of BCD data buried in a system, from $121; **SUPER REMOTE DISPLAY** does the same job as the regular remote display but has a super-big .75″PH readout for long-distance viewing, from $140; **PRELOADERS**, for automatically preloading a number into the count-down stopwatch or the up/down counter; excellent for automatic monitoring and control systems; from $135.

and...to make the SLIMLINES the most POWERFUL line...

PLUG-ON BUSTLES

ASCII TRANSCEIVER Unprecedented power for panel instruments! Plug this module onto your Slimline instrument and you can interrogate and control the instrument with a teletypewriter, computer, etc. A 2-digit ID number (settable in the field) permits selective addressing of 100 units on a single pair of wires. From $180.

DATA ISOLATOR/BUFFER Use this module to isolate the BCD outputs of a Slimline; great for thermocouple systems. Can also be used to buffer the BCD outputs for interface to high-level logic systems. In high noise environments, prevents noise picked up on the BCD cables from feeding back into a system. From $150.

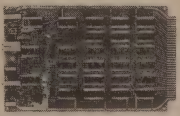
BUS INTERFACE This module lets you turn the parallel BCD outputs of a Slimline instrument on or off; you can hook up to 100 Slimlines onto a single bus using these modules, and then select only one at a time for input to a remote display, printer, computer, etc. Excellent for monitoring and data logging systems. From $160.

POWER SUPPLY Permits operation of a Slimline instrument directly from AC or DC power of higher voltage than standard Slimline requirements. Just plug onto the back of your Slimline and connect to your power source. (For systems using more than one Slimline, large power supplies capable of driving many Slimlines economically are available.) Models available to accept most power standards, from $110.

other products from NES

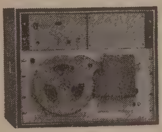
THE COMPACT SERIES

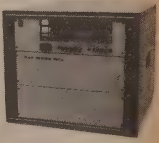
A complete line of high-quality panel instruments with features not available elsewhere. Parallel BCD outputs and remote control inputs are standard: **CALENDAR/CLOCKS** are the smallest in their class; 28 models with day-of-year or month/day calendars (fully automatic), optional internal crystal, from $413; **CLOCKS** are available in all time formats, with optional internal crystal time base, from $270; **EVENT COUNTERS** up to a full six digits with filtered inputs for high noise immunity, from $267; **STOPWATCHES** are available in all time ranges (100 models altogether) to measure from years down to fractions of milliseconds, from $260; and many more.



MOD-U-CARDS

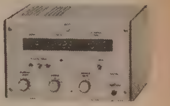
Complete system functions on plug-in cards. These are not limited-function logic cards, but complete building blocks for the system designer who demands conservative design and reliable performance. Include gold-plated connectors, test points, sockets for all I.C.s, and many other features. Over 700 models of circuit cards are available including **CLOCKS** from $183, **CALENDARS** from $194, **CLOCK/THERMOMETERS** from $194, **THERMOCOUPLE LINEARIZERS** from $344, **TOUCH-TONE** and **ROTARY DIAL PULSE DECODERS** from $182, **RELAY SCANNERS** from $148, **DIGITAL MULTIPLEXERS** from $63, **ASCII INPUT/OUTPUT CARDS** from $252, **CODE CONVERTERS** from $120, and many, many more.





DATA ACQUISTION

Super tough, super reliable data logging and data acquisition systems built with common-sense engineering for the laboratory or the factory. We have a system to fit any need: the **DIGILOGGER** interfaces any instrument with parallel BCD output directly to a teletypewriter or computer, from $753; **ANALOGGERS** scan several analog inputs and transmit the data in digital format (ASCII) to your teletypewriter or computer; up to 100 inputs, from $2,500; **SAM SYSTEM 1000**, a large data reduction system with up to 1,000 inputs, from $12,000; **PEAK & VALLEY LOGGER**, the digital replacement for the cumbersome strip chart recorder; automatically detects peaks and valleys in the input signal and records the time and amplitude; from $2,700.



COMMUNICATIONS

Rugged equipment designed for the communications field: **TELEPHONE TRAFFIC LOGGER** to monitor up to 40 telephone lines and 256 extensions and automatically record important data on each call; great for cost distribution, traffic pattern analysis, security, and reduction of telephone costs; rotary dial and touch-tone systems available, from $5,000; **CODE CONVERTERS** to change one code into another (and back again); very flexible, can handle ASCII, Baudot, and many other standard codes, plus special codes for data scrambling. Economical uni-directional models are available from $1,500; bi-directional models start at $2,400.

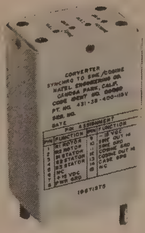
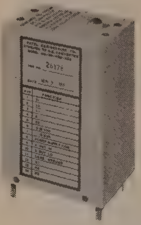
SYNCHRO CONVERTERS DC OUTPUT



SYNCHRO/SINE-COSINE
MODEL 431

FEATURES:

- Transformer Isolation
- ±0.1° Accuracy
- All Solid-State Design
- MIL—Qualifications

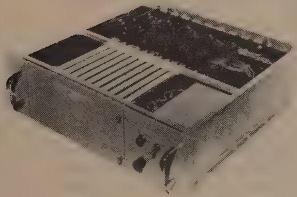


SYNCHRO to LINEAR DC
MODEL 416

The Model 431 Synchro to Sine/Cosine converter is a solid-state device which converts synchro or resolver signals into sine DC and cosine DC voltages. The conversion process maintains an accuracy of ±0.1%, including effects of reference and stator voltage variations (±10%). Designed primarily for radar display systems, the Model 431 is also used in data acquisition or recording systems for simulator control. In contrast to standard single or two-speed electro-mechanical systems, the solid-state 431 provides inputs to display systems completely free of hunting or spoking effects.

The Model 416 Synchro to DC Converter is a solid-state, lightweight unit designed to transform a synchro or resolver input to a linear DC voltage proportional to the input shaft angle. The 416 is designed to serve applications requiring stringent angular accuracies such as servo loops, data acquisition systems and other synchro related systems.

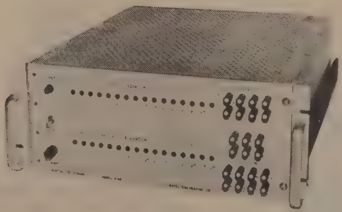
SYNCHRO TRANSMITTERS



SERIES 2066
DC to SYNCHRO

Series 2066 solid-state Synchro Transmitters convert DC sine and cosine input signals to either 3 wire synchro or 4 wire resolver output voltages. They are designed for use in computor control simulator applications. Conversion accuracy is better than ±0.05% and each channel provides power output capability of 7 watts.

Model 4160 Digital to Synchro Converters feature 15 bit resolution and up to 300 watts of output power. They are designed for applications requiring an ability to drive torque receivers out of a 180° false null. The units operate from 115/230 VAC and are available to interface with any synchro or resolver. The 4160 is available in multi-channel configuration.



MODEL 4160

8954 Mason Avenue, Canoga Park, California 91306, Phone (213) 882-9620

2-WIRE CURRENT TRANSMITTERS . . . 4-20 or 10-50ma

NATEL
HYBRID
2-WIRE XMTR
CT420

DESCRIPTION

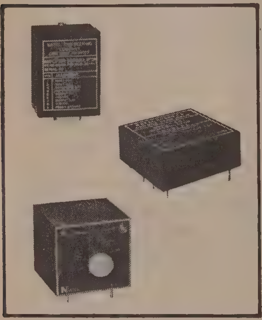
Designed for either integral transducer mounting or PCB installation, these two wire current transducers convert low level thermo couples, strain gages and RTD inputs to 4-20ma or 10-50ma outputs.

Zero and span adjustments are provided plus a proprietary technique to compensate zero shift of the overall transducer/transmitter combnation. Resulting temperature shift is 0.002°/°F.

FEATURES

- Sensitivity — 1mv
- Accuracy — 0.1%
- Zero T.C. — ±.002%/F
- Input Voltage — 10-50 VDC
- Dimensions — 1.75″ dia × 0.6″
  1.5″ sq × 0.6″

PHASE SENSITIVE AMPLIFIER DEMODULATORS



DESCRIPTION

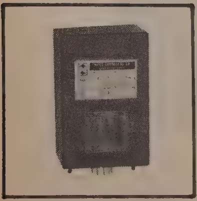
Low level phase sensitive suppressed carrier signals are converted to high level bi-polar dc voltage or current outputs compatible with telemetry systems, recorders or hydraulic servo valves, the amplifier demodulators are packaged as PCB plug-ins, strap down airborne components or multi-range rack mounted units. Gain and null (zero) potentiometers are provided.

Qualified to meet stringent military environments with MTBF's exceeding .25 × 10^6 hours.

FEATURES

- Input — 1mv-10v
- Gain $\frac{DC}{AC}$ — 5000:1
- Output — 0-5, ±2.5, ±10VDC
- Isolation — Input/Output/Ref/Pwr
- Linearity — ±0.05%
- Bandwidth — 20% of Fr
- Ripple — 0.1% p-p
- Quad. Rej. — 52 db

MODULATORS



FEATURES

- Input — 1-100VDC
- Output — 10vrms/1 watt
- Linearity — 0.1%
- Isolation — In/Out/Ref/Pwr
- CMR — 80 db
- Bandwidth — 20% of Fr
- Null — 0.1% p-p
- Distortion — 2%

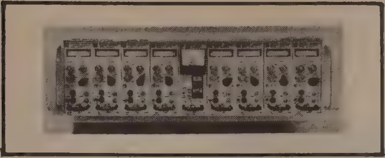
AIRBORNE DC STRAIN GAGE OR THERMOCOUPLE AMPLIFIERS

FEATURES

- Sensitivity — 1mv/v
- Gain — 1000:1
- Output (vdc) — 0-5, ±2.5
- Linearity — 0.1%
- Isolation — In/Out
- CMR — 80 db
- Bandwidth — 10KHz
- Excitation — 5 or 10

For complete information of products listed, request Catalog 575B.

CARRIER DEMODULATOR SYSTEMS



2088
system "N"

DESCRIPTION

Carrier demodulator systems convert low level amplitude modulated suppressed carrier signals, from LVDT, VRT, and/or strain gage transducer inputs operating in "noisy environments" to high level bi-polar dc outputs compatible with recorders, galvanometers and process controllers. Separate or common excitation amplifiers are available.

Using a proprietary "univector"; 360° balancing technique, system operation and calibration are unaffected by cable lengths exceeding 10,000 feet between the transducer and the system.

Model 2088 is a premium measuring system containing separate excitation amplifiers, integral meters, 100ma output current, and solid state overload detector. Options include dual carrier frequency operation, selectable bandwidth response, peak detector output, and remote programming of gain and calibration.

A 19" × 5.25" high rack accommodates eight carrier demodulators plus a master module. System power is 230vrms, 115vrms, 12vdc, or 24vdc. Combination i.e. 115vrms/12vdc is available.

Model 7116 is a general purpose system with 2mv sensitivity and R-C or Univector (360°) balancing plus a reference phase adjustment. A meter located in the master module allows any channel to be selected for balance or operational mode. Four calibration steps and four selectable frequency responses are provided.

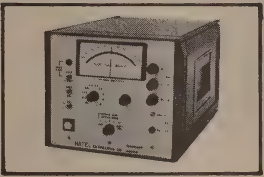
Available as a "mini system", four channels plus a master in a 9.5" wide rack × 5.25" high (see photo), or 10 channels in a 19" × 5.25" high or 20 channels in 8.75" high.

FEATURES

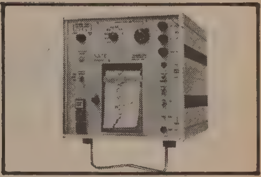
● Sensitivity	0.5mv (50 ustra)
● Accuracy	0.05% FSO
● Gain	5000:1
● Bandwidth	0.5db-25% F_c
● Carrier	0.4-100KHz
● CMR	120db
● Ref. Adj.	420°
● Bal. Adj.	128mv RTI and 420° non-interacting

TRANSDUCER INDICATORS

API 200



DTI 200



RTI200

DESCRIPTION

Indicators are self-contained precision transducer measuring instruments designed for utmost versatility using inter changeable plug-ins. Carrier demodulators plug-ins. Series SC2088 and SC3088 interface with LVDT's, VRT's, strain gage bridge (1, 2 and 4 arm), thermocouple, and potentiometer transducers. Transducer indicators provide a choice of display plus an analog ±10vdc dynamic output @ 10ma or 200ma.

FEATURES

- Sensitivity — 0.5mv
- Gain — 5000:1
- Gain Ranges — 10
- Accuracy — .05%
- Calibration — Shunt Type
- Overload Ind. — Adjustable
- Peak Detector — ±1mv
- Zero Stability — 20uv/°C
- Gain Stability — .002%/°C

OPTIONS

Single, dual, sum and difference inputs

Display in % FSO or engineering units

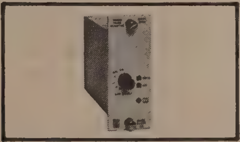
Dual carrier frequency

Multiple frequency response

Calibrated zero suppression

Remote Gain Programming

MODULAR CONDITIONERS



SC7116

SC7116-30

DESCRIPTION

Self-contained signal conditioners precisely convert millivolt transducer signals from strain gages, thermocouples, potentiometers, VRT's and LVDT's to high level bipolar D.C. outputs. Model SC7116 are carrier demodulator conditioners.

Sensitivities range from 0.1V V to 2V V with integral transducer excitation of 5 or 10 volts. Accuracy is ±0.05% of FSO with a choice of 0-5, ±2.5, ±5 or ±10VDC as full scale outputs. Zero stability is ±2mvdc RTO and gain coefficient is 0.002%/°C. Model SC7116-03 shown offers remote programming for both gain and calibration plus an auxiliary peak detector output.

NORTH ATLANTIC
SYNCHRO DATA MODULE
NORTH ATLANTIC
SYNCHRO DATA MODULE

Series 780

D/S & S/D MODULES

The Series 780 low-cost modules are available in a comprehensive selection for most design requirements. All digital input and output data is DTL & TTL compatible. This series also includes single module as well as multi-module converters with size versus maintainability cost being the selection criterion.

Series 780—S/D Modules

14-bit (0.022°) resolution with 4000°/sec data tracking rate and 3 minute ±0.9 LSB accuracy.

Series 780—2 Speed S/D Modules

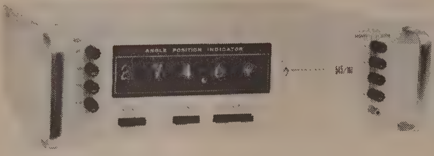
16-bit (0.0055°) resolution with 1000°/second data tracking rate. Typical ratios 36:1, 32:1, 27:1, 16:1, 15:1, 10:1. Accuracy for 36:1 ratio 0.11 minutes ±0.9 LSB.

Series 780—D/S Modules

14-bit (0.022°) resolution and 4 minute ±0.9 LSB accuracy. Power outputs available 1VA and 20VA.

General Features

70°C or 105°C, single or multi-module, 60 or 400Hz data, PC board available for multi-module sets.



Model 545/100

RESOLVER/SYNCHRO-TO-DIGITAL CONVERTERS

These solid-state converters continuously digitize resolver and synchro data at angular velocities up to 20,000°/sec. Continuous tracking is achieved through unique electronic servo techniques. Data frequencies include 60Hz, 400Hz, and higher frequencies in specific models.

Model 545—Automatic Angle Position Indicator

This instrument has .001° resolution and 10-second accuracy for 11.8V, 26V, and 90V line-line at 400Hz. The digital angle is displayed and available as BCD digital output. Other features include programmable or front-panel selection of resolver or synchro input, line-line voltage, and operating mode.

Model 545/100—Automatic Angle Position Indicator

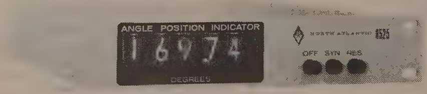
Similar to the Model 545 in overall function, but provided with .01° accuracy and resolution. This instrument accepts both 60 & 400Hz resolver and synchro data.

Model 546/20—Binary S/D Converter

This half-rack R-S/D Converter features 16-bit digital output resolution with 15-bit accuracy for 400Hz resolvers and synchros at line-to-line voltages of 11.8V, 26V and 90V. Front-panel selection of resolver or synchro input, and line-line voltage range.

Model 8525, 8225—Angle Position Indicator

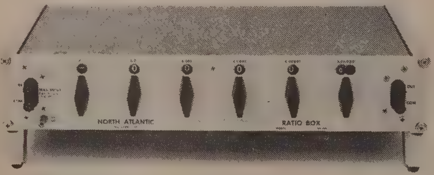
The half-rack 8525 offers 3-minute accuracy and .01° resolution, with 5-decade BCD digital output. Available as a two-channel instrument for any combination of synchro and/or resolver inputs at 11.8V, 26V, or 90V line-line 60Hz or 400Hz. The 8225 is a 4-decade, 6-minute accuracy model.



Model 8525

DIGITAL-TO-RESOLVER/SYNCHRO CONVERTERS— Series 538

These programmable converters are available with 14- to 17-bit single-speed digital input resolution. Analog output is 400Hz resolver/synchro transmitter data at selected line-line voltages with 1-minute accuracy. All models feature output transformer isolation and short-circuit protection. Optional accuracy 40 arc-seconds.



RB-503, RB-504

AC RATIO BOXES

These precision inductive voltage dividers feature high input impedance, low output impedance, and accuracy over a wide frequency band.

Model RB-503, RB-504 AC Ratio Boxes

The RB-503 features 10ppm accuracy from 50Hz to 5KHz, and ratios from 0 to 1.111110. The RB-504 features 1ppm accuracy from 300Hz to 1KHz, and ratios from −0.111110 to +1.111110.

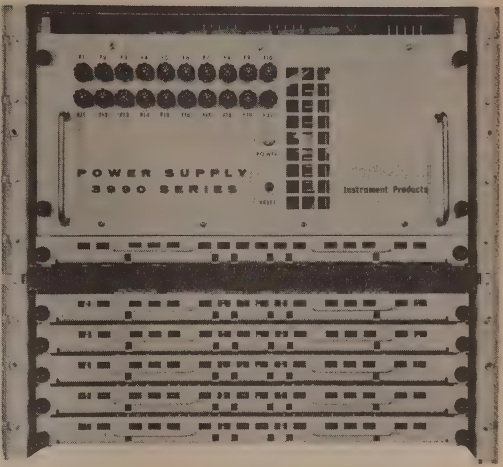
Model RB-503T—Inverting AC Ratio Box

This model features isolated input with full inversion capability. Ratio range ±1.111110 with 10ppm accuracy.

For Phase Angle Voltmeters, Resolver/Synchro Simulators & Bridges and Angle Position Indicators, see our page in the Instruments, Measuring & Test Section, Page 1-772.

REED SCANNERS SWITCHING MATRICES

North Hills



SYSTEMS APPLICATIONS FOR

- Data acquisition.
- Multiple channel recording.
- Calibration.
- Automatic test.
- Communications.
- Process control

3990 GUARDED SWITCHING MATRIX

- Random access two-dimensional reed relay switch matrix.
- Five-digit program command results in interconnection of selected matrix crosspoints. Command, consisting of five parallel BCD (1-2-4-8) characters, identifies up to 10,000 crosspoints and desired action (reset, close or open one, ten, one hundred or all points).
- Ten basic 1 x 10 matrix configurations with associated flip-flop storage (100 crosspoints) per plug-in module. Interconnectable in assorted combinations: 1 x 50, 5 x 10, 1 x 100, etc. Five plug-in modules per chassis.
- Power supply/decode module accommodates up to 2000 crosspoints.

3383/1221 GUARDED SCANNER/PROGRAMMER

- Programmer accepts address from digital programming device (computer, core programmer, tape reader, etc.) and connects desired scanner input channel to a single output. The single output channel may be further programmed through an optional output multiplexer to one of ten possible output locations.
- Number of maximum input channels per scanner: 1000 single-wire, 500 two-wire, 400 three-wire, 200 six-wire channels.
- Programmer maximum capability: 10,000 channels.

Typical reed contact characteristics:

Material:	Di-Met to diffused gold.
Current power rating:	0.5 A maximum, 10 VA.
Breakdown voltage:	300 V rms minimum.
Insulation resistance:	1 x 10^9 ohms.
Thermal emf:	10 microvolts maximum for 30 seconds maximum channel activation.
Switching speed:	3 milliseconds maximum after program command.
Life expectancy:	2 x 10^7 at maximum rating. 5 x 10^7 at half maximum rating. 10 x 10^7 low loads.

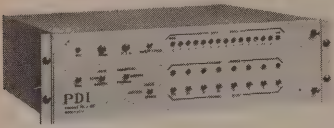
PDI® Analog Data Acquisition Subsystems

6000 SERIES High Level Analog Data Acquisition Systems



Units in the 6000 Series are highly flexible instruments, with many options, that can be matched exactly to the capabilities and characteristics of the control unit or data storage device. Within the 6000 Series there are three subgroups. The subgroups feature high speed, high temperature stability, and low cost. All three groups offer resolution from 8 to 15 binary bits and will accommodate up to 256 single ended or 128 differential inputs in a single chassis. These features combined with single channel, random and sequential address capabilities make the 6000 Series easily adaptable to your system requirements without the need for costly custom engineering. The system comes complete with all necessary power supplies for its operation and requires only 110V AC line power.

FEATURES:

- Multiplexed Thruput Rates to 1MHz
- Temperature Compensation to 10 ppm
- Versatile optional Manual Controls and Indicators
- Choice of Standard Input Voltage Range Options
- Field Expandable to 256 Channels (S.E.)
- Differential or Single Ended Input
- Resolution to 15 Bits
- Input Overvoltage Protection to ±30 Volts
- System Accuracies to 0.01%

3 SUB-SERIES

6900 - Highest Speed

The 6900 group provides the highest thruput rate in the 6000 Series. Resolution of 8 to 15 binary bits is available with multiplexing rates to 1 MHz for an 8 bit model, 400 KHz for a 12 bit model and 220 KHz for a 15 bit model. The 6900 system was designed primarily for applications where the analog input bandwidths are high. Base price: $2,921.00.

Model No.	6908	6910	6912	6913	6914	6915	Notes
No. of Bits (Binary)	8	10	12	13	14	15	
Resolution (1 Part in)	255	1,023	4,095	8,191	16,383	32,767	
Thruput Rate (KHz)	1000	800	400	250	220	220	(1)
Thruput Error (% FSR @ 25°C)	0.4	0.15	0.05	0.03	0.02	0.01	(2)
Input Ranges (STD)	A,B	A,B	A,B,C,D,E	A,B,C,D,E	B,C,D,E	B,C,D,E	(3)

General 6900 Specifications
System T.C.: 0.003% FSR/°C
Aperture Delay: 10 nanoseconds
Aperture Uncertainty: 1 nanosecond

Notes:
(1) Thruput rate for sequential mode or random mode when address is supplied one channel ahead.
(2) Accuracy specification includes all error sources and the quantizing error of ±½ LSB.
(3) Input ranges: A=0 to +5V; B=±5V; C=0 to 10V; D=±10V; E=±10.24V

6700 - Highest Stability

The 6700 group provides the highest thermal stability of the 6000 Series. The overall system temperature coefficient is less than 0.001% FSR/°C or 10PPM. This system was designed specifically for applications where wide temperature variations might be encountered and high accuracy must be maintained. Base price: $2,220.00.

Model No.	6708	6710	6712	6713	6714	6715	Notes
No. of Bits (Binary)	8	10	12	13	14	15	
Resolution (1 part in)	255	1,023	4,095	8,191	16,383	32,767	
Thruput Rate (KHz)	110	90	65	60	20	20	(1)
Thruput Error (% FSR @ 25°C)	0.4	0.1	0.025	0.015	0.01	0.01	(2)
Input Ranges (STD)			A,B,C,D,E			B,C,D,E	(3)

General 6700 Specifications
System T.C.: 0.001% FSR/°C
Aperture Delay: 10 nanoseconds
Aperture Uncertainty: 1 nanosecond

Notes:
(1) Thruput rate for sequential or random mode
(2) Accuracy specification includes all error sources and the quantizing error of ±½ LSB
(3) Input ranges: A=0 to +5V; B=±5V; C=0 to 10V; D=±10V; E=±10.24V

6400 - Lowest Cost

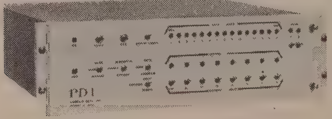
The 6400 offers an attractive compromise between thruput rate, temperature stability, and cost. While the lowest priced group in the 6000 Series, it offers moderate thruput rates and thermal stability. The 6400 group was designed for applications where low cost is a major consideration along with reasonably high performance. Base price: $1,826.00.

Model No.	6408	6410	6412	6413	6414	6415	Notes
Number of Bits (Binary)	8	10	12	13	14	15	
Resolution (1 part in)	255	1,023	4,095	8,191	16,383	32,767	
Thruput rate (KHz)	70	65	50	25	10	4	(1)
Thruput Error (% FSR @ 25°C)	0.4	0.1	0.025	0.015	0.01	0.01	(2)
Input Ranges (STD)			A,B,C,D,E			B,C,D,E	(3)

General 6400 Specifications
System T.C.: 0.002% FSR/°C
Aperture Delay: 50 nanoseconds
Aperture Uncertainty: 10 nanoseconds

Notes:
(1) Thruput rate for sequential or random mode
(2) Accuracy specification includes all error sources and the quantizing error of ±½ LSB
(3) Input Ranges: A=0 to +5V; B=±5V; C=0 to 10V; D=±10V; E=±10.24V

7000 SERIES • Automatic/Programmable Gain Ranging



The 7000 Series offers a unique solution to high speed analog to digital conversion where the input amplitude cannot be predicted in advance of the conversion. Utilizing a high speed, fast settling multi-range amplifier the 7000 Series can switch channels, determine the gain range, and perform a 14 bit A to D conversion in less than 20 microseconds. Five models with thruput rates from 10 KHz to 50 KHz are available. In the Autoranging mode a 14 bit data word is combined with 2 bits of range data for a 16 bit output word. A single chassis will accommodate from 8 to 128 differential channels. Base price: $5,562.00.

Model No.		7115	7215	7315	7415	7515	Notes
Thruput Rate (KHz)		10	20	30	40	50	
Thruput Error (% FSR @ 25°C)							(1)
Full Scale	±10.0	0.01	0.01	0.01	0.01	0.01	
Input	±1.0	0.015	0.02	0.025	0.03	0.035	
Range (Volts)	±0.1	0.02	0.025	0.03	0.04	0.05	

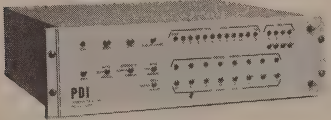
Features:

- Resolution to 15 bits
- Thruput Accuracy to .01%
- Auto or Programmable Gain Ranging
- Four Customer Selected Gain Ranges from 0.1 to 10.0 Volts
- Multiplexed Thruput Rates to 50 KHz

General 7000 Specifications
Input Ranges (Customer Selectable): Any four from ±0.1 to ±10.0 Volts
Input Impedance: 100 megohms (ON or OFF)
CMRR (DC to 60 Hz with 350 ohms source unbalance)
Gain Level: 1 = 80 db; 10 = 100 db; 100 = 120 db
Common Mode and Normal Mode Voltage: ±11 Volts.
Cross Talk Rejection (DC to 1 KHz with 350 ohms source unbalance)
Thruput Rate (KHz): 10 = 110 db; 20 = 104 db; 30 = 98 db; 40 = 92 db; 50 = 86 db
Gain Range Change: 90% of full scale
Thruput T.C.: 0.002% FSR±3 μ volts RTI/°C

Notes:
(1) Thruput error includes all error sources and ±½ LSB in automatic mode. Error is slightly less in programmed mode.

8000 SERIES • Automatic/Programmable Gains to 1024



The 8000 Series features adaptability to almost any input signal currently in use. The system offers automatic or programmed gain selection with 11 binary ranges from ±10 millivolts to ±10.24 volts full scale. In the automatic ranging mode the gain ranges effectively provide the system with a binary floating point capability. The data word (12 binary bits) is combined with the range data (4 binary bits) for a 16 bit output word. The 8000 System will resolve input changes at 5 microvolts on the ±10 millivolt range for an overall analog dynamic range of 132 db. Base price: $3,876.00.

Gain Ranges: 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024
Input Ranges: ±10.24, 5.12, 2.56, 1.28, 0.64, 0.32, 0.16, 0.08, 0.04, 0.02, 0.01 Volts
Thruput Error: Less than .05% of the reading on any input over 5 millivolts @ 25°C
Differential CMRR (DC to 60 Hz): 80 db at unity gain and increasing to 120 db at a gain of 1024 with 350 ohms source unbalance
Common Mode and Normal Mode Voltage: ±11 Volts.
* Prices subject to change without notice.

Aperture Time: 50 nanoseconds
System T.C.: 0.001% FSR±1 μ volt RTI/°C
Crosstalk Rejection: Minimum of 100 db, DC to 60 Hz
Input Impedance: 100 megohms (ON or OFF)
Thruput Rates:

Automatic Gain Ranging Mode	
Single Channel	2.5 KHz
Multiplexed Input	1.0 KHz
Programmed Gain Mode	
Fixed Gain, Single Channel	20 KHz
Gain and Channel Switching	1.8 KHz

Features

- Resolution of 12 Bits
- 11 Binary Gain Ranges
- ±10 mv to ±10.24V Input Ranges
- Thruput Rates to 20 KHz
- Auto or Programmable Gains
- System Accuracy of 0.05% of Reading

Subsystem computer interfaces available. Contact factory for quotation.

Price 1 to 9	$332.	$388.	$444.	$500.	$556.	$669.	$781.

NOTE: All characteristics are available in open-constructed modules. Write for details.

*Total conversion time from trailing edge of TTL/DTL Logic level.

**The conversion error includes all error sources, ±½ LSB and all temperature related errors over the temperature range of 10° to 40°C up to 12 bits and 15° to 35°C for 13 and 14 bit resolution with no adjustments. If an input range other than that specified at time of purchase is selected, the gain and offset may have to be adjusted.

***The temperature coefficient includes all gain, offset, reference, and differential linearity related temperature effects over 0 to 70°C. For extended operating temperature ranges the T.C. degrades by a factor of 2 from +70°C to +125°C and from 0°C to —55°C.

NOTES:
1. Lower resolution units available on request.
2. Conversion time includes settling time to rated accuracy for a full-range step (worse case). See Conversion Timing Diagram.
3. Accuracy figures include all error parameters.
4. Standard operating temperature range is 0°C to 70°C. Extended temperature ranges are available. Also, on special order, units available to 2.5 ppm/°C.
5. For Model Number Coding, see Ordering information.
6. For special configurations or applications, contact your local Phoenix Data, Inc. representative or the factory.
7. The temperature coefficient includes all gain, offset, reference and differential linearity related temperature effects over 0 to 70°C. For extended operating temperature ranges the T.C. degrades by a factor of 2 from +70°C to +90°C and from 0°C to —55°C.

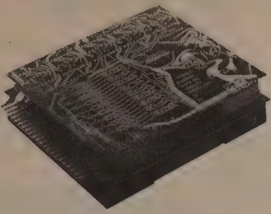
PDI® High Speed Analog to Digital Converters



NEW AND EXCLUSIVE A/D CONVERTER

features:

High Speed: 4 μsec.
High Resolution: 15 Bits
High Accuracy: ±0.0065% of FSR

Phoenix Data's new Model ADC1215F A/D converter is a high-performance design with a total conversion time of 4 microseconds (220,000 conversions per second), a resolution of 15 binary bits (1 part in 32,767), and guaranteed accuracy of ±0.0065% of FSR in addition to complete monotonicity. Analog dynamic range is in excess of 86 db. Model ADC1215F is available in two basic models: single-ended and differential. The ADC1215F utilizes a single fold-back technique in conjunction with successive approximation conversions to achieve an equivalent conversion rate of 267 nanoseconds per bit.

Model ADC1215 is identical with the ADC1215F except that conversion time is 10 microseconds.

ADC1215F SPECIFICATIONS

ENCODING (Digital Quantizing)

Number of Bits	15 binary bits
Accuracy (% of Full Range)	0.0065%
Temperature Coefficient	±10 PPM/°C
Resolution	1 part in 32,767
Conversion Time (Total)	4.0 microseconds

ANALOG INPUT SIGNAL

Standard Full Range	±10V
Connection	Single Ended or Diff. Opt.
Input Impedance	100 Megohm
Overvoltage	±15V, Maximum

CONTROLS, INPUTS AND OUTPUTS

Output Codes	2's Complement and Offset Binary
Logic Levels	TTL/DTL
Data Output Drive	Full TTL capability
Output Data	Stored until updated at end of conversion
Command to Convert	Conversion is initiated on leading edge of positive going pulse.
Busy Output	Goes true at CTC and False at End of Conversion
End of Conversion	Pulse goes true at End of Conversion 100 nanoseconds duration
Overrange	Output goes full scale and overrange bit goes true

ENVIRONMENTAL

Temperature/Operating	0°C to +70°C
Temperature/Storage	—55°C to +100°C
Humidity	0 to 99% Relative, non-condensing

POWER REQUIREMENTS

+15V, ±5% @ 150 MA
—15V, ±5% @ 75 MA
+5V, ±5% @ 900 MA

Base price:

1215 $1,118.
1215F $1,678.

SPEEDS to 100 MHz

MODEL ADC1105-100 A/D CONVERTER COMBINES

High Speed with (100 million conversions per second)
Exceptional Accuracy (±1.5%±½LSB)

Phoenix Data's new very-high-speed (100 million conversions per second) analog to digital converter is designed to digitize ultra-high-speed analog input signals — including high-speed display and radar signal digitized input — with accuracy of ±1.5%±½LSB.

The new ADC1105-100 also has a resolution of 5-bit binary or 2's complement with a ±2 volt input range. A "system-ready" module only 8"x7.50"x2", it is totally self-contained and incorporates all of the functions necessary to perform 5-bit binary conversions at 100 million per second except for power supply. Model ADC1105-60 is identical with Model ADC1105-100 except that conversions are performed at a rate of 60 million per second.

SPECIFICATIONS

ANALOG INPUT SIGNAL

Accuracy	±1.5%±½LSB
Full Range	±2 volts
Connection	Coaxial, Single Ended
Input Impedance	50 Ohms
Bandwidth, 1dB	50 MHz

CTC (Command to Convert) STROBE

Logic Type	ECL
Input Impedance	50 Ohms
Conversion	Initiated on negative going transition
Pulse Repetition Rate (PRR)	100,000,000/Second
Pulse Duration	Square wave

END OF CONVERSION (EOC)

Pulse	ECL level, rising edge signifies EOC
Width	Same as CTC Strobe Occurs less than 10 nanoseconds after CTC Strobe

DATA OUTPUTS

Code	5-bit Binary and 2's complement with monotonicity
Logic Type	ECL compatible
Drive	50 Ohm lines
Parallel Data Out	Sustained 1 cycle
Output Skew	±1 nanosecond (typical)

POWER REQUIREMENT

+5.2Vdc ± 5% @ 1.2 ampere
—5.2Vdc ± 5% @ 2.5 ampere

PACKAGE	Approx. 8.0" x 7.50" x 2.0"

ENVIRONMENTAL

Temperature	
Operating	0°C to +50°C
Storage	—55°C to +125°C
Humidity	0 to 99% relative, no condensation

Base price:

1105-60 $3,080.
1105-100 $6,120.

PRESTON

ANALOG-TO-DIGITAL CONVERSION SYSTEMS

Here are the world's most reliable Analog-to-Digital Conversion Systems with speed and resolution to meet the needs of every instrumentation and data conversion system.

From the 'world's fastest high resolution ADC'—the GMAD-01—to the new 'low cost' GMAD-4 that can be easily expanded to over 1000 analog input channels at less than $25 per channel, Preston's GM Series of ADCs are delivered with exactly the right amplifiers, multiplexers, controls, indicators and interface features to give your system the ultimate in accuracy, flexibility and efficiency!

And every model in the GM Series comes complete with integral power supplies and interface connectors—ready to install in a standard 19 inch wide rack.

With the GM Series of ADCs, you have a complete selection of low-level and high-level analog amplifiers and multiplexers. This versatile input system is further complemented by a choice of several Sample-and-Hold Amplifiers and special gain scaling buffer amplifiers whose configurations include manual or remote programmed address and automatic gain control capability.

For complete information including detailed specifications, block diagrams, timing charts and examples of overall system performance, call or write Preston Scientific. We'll send you our "Specifying Guide" and include price and delivery information, too!

ANALOG TO DIGITAL CONVERSION SYSTEM

GMAD Series Analog-to-Digital Converters

Five models are included in the GMAD Series to provide an exceptionally wide range of speeds and resolutions.

Resolution	Accuracy (% of F.S. ±½ L.S.B.)	Conversion Time GMAD-01	GMAD-1	GMAD-2	GMAD-3	GMAD-4
14 binary bits + sign	0.010%	*	1.5 μsec	5.0 μsec	10 μsec	20 μsec
13 binary bits + sign	0.015%	*	1.4 μsec	4.5 μsec	9 μsec	19 μsec
12 binary bits + sign	0.025%	0.5 μsec	1.2 μsec	4.0 μsec	8 μsec	18 μsec
11 binary bits + sign	0.05%	0.4 μsec	1.0 μsec	3.5 μsec	7 μsec	17 μsec
10 binary bits + sign	0.1%	0.3 μsec	0.3 μsec	3.0 μsec	*	16 μsec
9 binary bits + sign	0.2%	0.2 μsec	0.2 μsec	2.5 μsec	*	*
8 binary bits + sign	0.4%	0.1 μsec	0.1 μsec	2.0 μsec	*	*
7 binary bits + sign	0.8%	*	0.1 μsec	1.5 μsec	*	*
4-digit BCD and sign	0.01%	*	*	10 μsec	40 μsec	*
3-digit BCD and sign	0.1%	*	*	8 μsec	32 μsec	*

*These configurations not available

Model GMM Multiplexers

Both single-ended and differential input multiplexers provide a common output line isolated from all other signals by 2000 megohms. Easily expandable to over 1000 channels in groups of four, eight or 16, depending on the model number and the GMAD Series in which they are installed.

These specifications are for the Model GMM -1 which is used in the GMAD -1, -2 and -3.

Input Impedance	Greater than 50 Megohms
Switching Time	Less than 1 microsecond
Input Offset Current	Less than 10 nanoamps
Input Voltage	Up to ±10 volts
Crosstalk	Less than ±0.01% for 100 channels
Linearity	±0.01% of Full Scale
Zero Drift	Less than ±0.01% of Full Scale

Model GMSH Sample-and-Hold Amplifiers

For precise time correlation between multiple input signals. Can be used ahead of the multiplexer or between the multiplexer and the ADC to reduce aperture errors and increase timing accuracy.

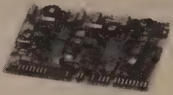
These specifications are for the Model GMSH-10 which can be used in all models of the GMAD Series ADCs.

Gain	Unity
Gain Stability and Linearity	±0.01% of Full Scale
Input Impedance	Greater than 10 Megohms
Noise	Less than 1 mV peak
Hold Delay	100 nanoseconds
Settling Time to 0.01%	Less than 0.5 usec
Droop in Hold Mode	±1 mV after 1 ms
Aperture Error	10 nanoseconds

PRESTON SCIENTIFIC INCORPORATED 805 East Cerritos Ave., Anaheim, Calif. 92805 Tel: (714) 776-6400 TELEX 65-5321

Complete ADC Systems with High-Level and Low-Level Multiplexers, Amplifier-per-Channel Systems With Programmable Gain, and Logic Interface to Computers

Model GMD Amplifier-Multiplexers

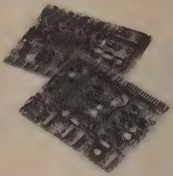


Direct coupled amplifiers with gains selectable from less than unity to gains of over 1000. All models combine wide bandwidths with excellent long-term stability, accuracy, linearity and very low temperature coefficients.

Gain Accuracy	±0.01% of Full Scale
Gain Stability	±0.01% of Full Scale for 6 months
Gain Temp Coeff.	±0.002% per °C
Linearity	±0.01% of Full Scale
Input Impedance	100 Megohms @ Unity gain or greater
Common Mode Rejection	80 db — DC to 60 Hz
Bandwidth	1 MHz
Noise	Less than 1 millivolt
No. of Channels in 5½" high rack	48
Output	Commutated ±10 Volts F.S.

Programmable Gain Amplifiers

Model GMD-PG Amplifiers with Digitally Programmed Gain Control



Accurate control of the gain of the ADC input amplifier can now be determined by external computers and controllers. A standard three-bit binary coded signal is used to set the amplifier gain at precise pre-established levels over a 16-to-1 range. Full 0.01% gain accuracy and stability are assured even at multiplexer rates as high as 1 MHz!

Model GMD-AGC Amplifier with Auto-Ranging Gain Control

For the ultimate in system resolution and accuracy where the input signal level is constantly changing, the Model GMD-AGC Amplifier will automatically establish the optimum amplifier gain in 5 binary steps that cover a 16-to-1 range. With this special amplifier, the output signal will always have an output amplitude above 50% of full scale without exceeding the upper amplitude limits of the analog-to-digital converter!

The gain setting of the amplifier is, in turn, used to generate a three-bit digital signal that is added to the end of the digital ADC output signal so that the data acquisition system will be able to identify the amplifier gain setting for each individual channel!

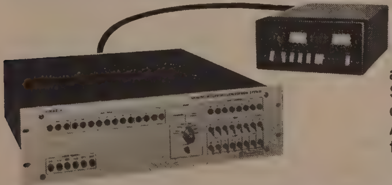
No special programs or controllers are necessary with this automatic gain control system. It's all built into the GMAD System to further simplify equipment requirements and lower system cost.

Logic Interface to Your Computer

Direct interfacing with your computer or controller can now be made an integral part of every GMAD Series A/D Conversion System. Preston can include plug-in logic and control modules that provide the right sequencing and logic levels to match your particular computer program.

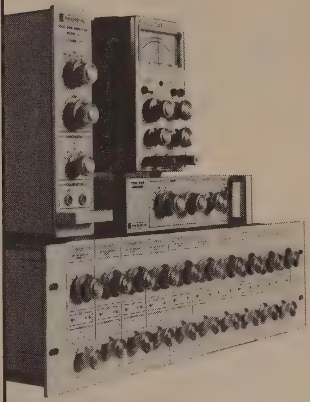
Just let us know the type of computer you plan to interface with our ADC, and we'll provide all the 'hand-shaking' signals you need.

If you're using a DEC PDP-11, HP 2100, Varian V-73, Data General NOVA or other similar computers, we already have the interface system ready to install, and we'll even provide the interconnecting cables!



Save yourself time, trouble and expense. Call or write Preston Scientific for details. We'll make certain you get a complete GMAD ADC System — ready to operate the first day it arrives!

Preston Builds the World's Most Accurate Amplifiers and Data Acquisition Sub-System Components, too!



The "Balanced Precision" performance of Preston's 8300 XWB Series Amplifiers deliver greater accuracy than any other amplifier under all operating conditions!

With improved Common Mode Rejection, Temperature Stability, Overload Recovery and reduced "Pumpout Current," Preston's amplifiers reduce the major sources of instrumentation system errors.

Now the higher performance and system flexibility of these advanced amplifiers has been combined with signal conditioners, multiplexers, analog-to-digital converters, sequencing controls and function indicators to meet the need for improved front-end components in high accuracy, high speed data acquisition systems.

You'll find detailed information on these outstanding amplifiers on Pages 1•12 and 1•13 of Volume 1 of EEM, and a full description of Preston's data acquisition sub-system components on the next four pages.

For specific information on all of Preston's advanced instrumentation equipment, write or call —

PRESTON

DATA ACQUISITION SUB-SYSTEMS AND ANALOG FRONT-END COMPONENTS

ANALOG AMPLIFIERS AND MULTIPLEXERS

Low level or high level — single-ended or differential — Preston has the configuration to meet your requirements!

Preston, the leader in high performance A/D converters and precision analog instrumentation amplifiers, is now providing a complete line of sub-system components designed to meet today's most demanding requirements for computer based data acquisition systems.

Preston's low-level and high-level amplifiers and multiplexers provide the accuracy and stability to match the resolution, accuracy and speed of Preston's well-established family of GM Series Analog-to-Digital Conversion Systems.

Preston can now provide everything necessary to complete the 'front-end' sub-system for virtually every type of computer-based data acquisition system. And complete system controls that provide the exact interface your computer needs can be included in any of Preston's ADC and multiplexer systems to make your entire data acquisition system "plug and program compatible" the first day it is installed.

8300 XWB Series Instrumentation Amplifiers

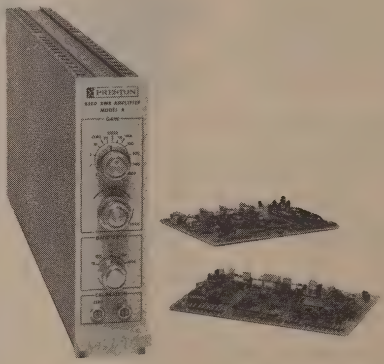
The highest accuracy and stability available today! And every model in the 8300 XWB Series has improved CMR, pumpout current and overload recovery specifications to reduce the biggest sources of data acquisition system errors!

With accuracy as high as 0.01% and linearity to 0.005%, these amplifiers are built to match the resolution of our high accuracy ADCs.

And many models provide infinite isolation with a CMR of 150 db (130 db at 60 Hz) at CMV of 350 volts, plus remotely programmed gain and bandwidth on a per-channel basis to further improve the speed, accuracy and flexibility of your system.

Model GMM High Speed, High Level Multiplexer

A single-ended high speed FET type multiplexer for switching multiple inputs onto a common high level output line. Differential inputs can also be multiplexed with another configuration of this multiplexer.



Model GMD Amplifier-Multiplexers

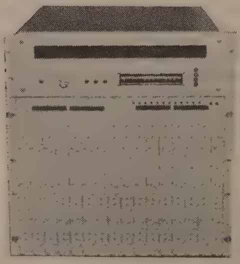
Card mounted for installation in rack-mounted assemblies, these low cost amplifiers are ideal for wide band systems that require high speed multiplexing with amplifier-per-channel performance. Accuracy is 0.01% and the output is ±10 volts full scale with many models available for input signal amplitudes in the range from 10 volts to as low as 10 millivolts full scale. Amplifier output filters down to 2 Hz (−3 db point) are available as options.

Model GMSH Sample-and-Hold Amplifiers

Where precise time correlation between multiple input signals is required, Preston's Sample-and-Hold amplifiers provide exceptionally fast acquisition and aperture times. They can be used ahead of the multiplexers or between the multiplexer and the ADC to reduce aperture errors.

Model LLM Low Level Multiplexer

Preston's latest engineering advance! This low level multiplexer system provides a floating isolated input for the ultimate in performance with low crosstalk, good temperature stability and high accuracy on input levels from 1 millivolt to 10 volts full scale.



The LLM system features also include input data filters (single and multiple pole), remote gain selection on a per-channel basis and operating rates up to 50 kHz in systems with as many as 1024 channels!

The exceptional reliability and accuracy of the Model LLM Low Level Multiplexer makes it ideally suited to replace many types of low performance solid state multiplexers and certain relay and crossbar multiplexing systems.

FOR ADDITIONAL SPECIFICATIONS ON PRESTON AMPLIFIERS, SEE PAGES 1•12 AND 1•13 OF VOLUME 1 OF EEM.

Low Level and High Level Analog Amplifiers and Multiplexers
High Accuracy Analog-To-Digital Converters
Digital-To-Analog Converters • System Controls

ANALOG-TO-DIGITAL CONVERSION SYSTEMS

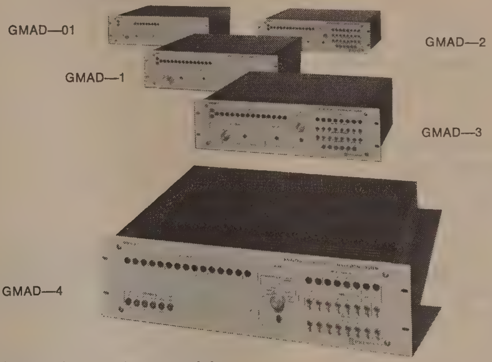
High resolution, ultra fast A/D Converters with 15 bit resolution at 50 KHz to 750 KHz word rates.

GM Series Analog-to-Digital Conversion Systems

Preston's GM Series of ADCs cover the entire range of accuracies, resolutions and conversion speeds. From the GMAD-01 that completes a 9 bit conversion in only 100 nanoseconds to 15 bit models with conversion times that range from 1.5 usec to 20 usec, there's a high reliability GM Series ADC for every data acquisition and data reduction system.

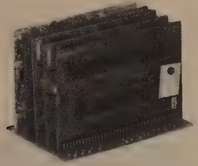
Every GM Series ADC is self contained with its own power supplies, timing and control circuits, multiplexer channel controls, channel and digital conversion indicators, and amplifiers and multiplexers as required —all in complete assemblies ready for rack mounting.

They're all designed for expansion, too, so that as your system requirements change, you can change the type of amplifiers and multiplexers to keep your system up to date.



The heart of every data acquisition system is the accuracy and reliability of the analog-to-digital conversion system, and Preston has earned its reputation for excellence with over 1400 ADCs delivered - most in constant use - and with over 15 years of customer satisfaction and success to prove it!

Digital-to-Analog Converters



Module-mounted multi-channel digital-to-analog converters are also available in the GM Series ADC systems to make the generation of analog data simulation as accurate and reliable as the basic A-D converter.

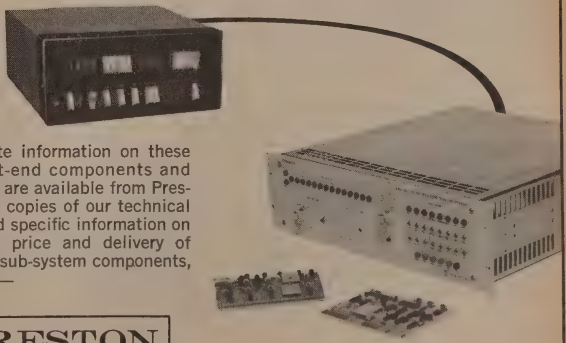
Specifications include 15 bit resolution and accuracy, update rates to 500 KHz and outputs of 10 volts or 100 volts full scale.

These modules are designed to be installed within the standard GM Series chassis, and the outputs are available on rear-panel connectors for easy interfacing with other system components.

System Controls

The GM Series ADCs include internal timing and sequence controls that permit each system to operate independently. Manual controls permit the operator to select any multiplexer channel or any particular portion of the normal multiplexer sequence from 'first' and 'last' channel controls located on the front panel.

Logic control both to and from the system is also provided for 'stop,' 'hold' and 'run' functions, and Preston systems often include control modules that permit direct 'plug-to-plug' interconnection with many standard computers and controllers.



Complete information on these analog front-end components and ADC systems are available from Preston. For your copies of our technical literature and specific information on performance, price and delivery of any of these sub-system components, call or write —

PRESTON

DATA ACQUISITION SUB-SYSTEMS AND ANALOG FRONT-END COMPONENTS

The modular construction of Preston's analog front-end components and analog-to-digital converters simplifies the design of the optimum sub-system for every application.

With amplifiers and multiplexers to match all input levels, plus a full range of ADCs with speed and accuracy to complement your computer's performance, you can have the 'ideal' data acquisition system 'on-line' in the shortest possible time!

Here's an example of a typical Preston 'front-end' for a 512 channel data acquisition system that includes both high-level and low-level analog inputs, and must interface a 15 bit digital output with a PDP-11 computer:

Analog Signal Amplifiers and Multiplexers

512 analog input channels consisting of:

256 low-level GMD-1000 Amplifier/Multiplexers for analog signals between 10 and 150 millivolts full scale.

240 high-level GMD-10 Amplifier/Multiplexers for analog signals between 500 millivolts and 1 volt full scale.

16 high-level GMD-1 Amplifier/Multiplexers for analog signals of up to 10 volts full scale.

Analog-to-Digital Converter

A GMAD-1 15 bit ADC (14 bits plus sign) that provides 0.010% accuracy at a conversion time of only 1.5 microseconds. Includes operating mode controls and binary output indicators on front panel.

Sample-and-Hold Amplifiers

30 Sample-and-Hold Amplifiers for precise time correlation high accuracy conversion of certain dedicated analog channels between 1.0 and 10 volts full scale.

Multiplexers and Sub-Multiplexers

30 GMM Multiplexers to follow the Sample-and-Hold Amplifiers.

16 GMM Multiplexers for sub-multiplexing the input data channels to minimize analog buss capacity.

Multiplexer Timing and Control Sub-Systems

Internal clock and sequencing circuits for multiplexer addressing. Front panel controls permit independent selection of individual channels and also permit manual selection of 'short-cycle' multiplexer sequencing through 'first' and 'last' channel selection switches.

Computer Interface

This system incorporates a Preston logic-matching hardware type computer interface circuit. The interface logic is from a catalog of available Preston logic interfaces that are compatible with the most widely used 16 bit computers. These plug-in modular circuits provide all the necessary 'hand-shaking' signals between the MUX control system, the ADC and the computer I.O. Buffer (A/D Controller) so that full interfacing of timed channel selection data, start and stop commands and all status signals and digitized data is correctly directed to the computer.

Preston can even supply the interface cable, so that your entire system is ready to go the day it arrives!

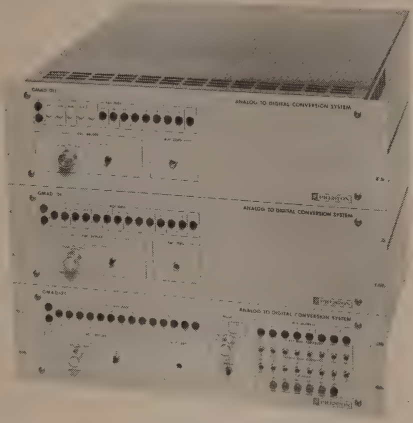
And Preston will work with you to make certain that there is compatibility between the interface hardware and the software drivers that are available from the computer manufacturer's software library.

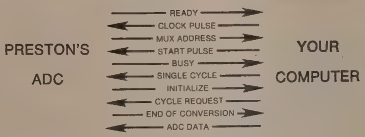
Complete Data Acquisition Sub-Systems with Multi-Level Analog Input Amplifiers and Multiplexers, A/D Converters and Direct Interface to Your Computer System!

Your requirements determine the design of Preston's sub-systems.

With the full line of sub-system components available from Preston, there's never any need for compromising performance. You can select the transducers and signal sources that give you the most accurate and the most reliable performance you can find, and Preston will have an equally accurate and reliable amplifier and multiplexer to handle the signal.

And compatibility of performance in all parts of Preston's sub-systems is assured, too! We've been building the world's most reliable amplifiers and analog-to-digital conversion equipment since 1959, and it's all been designed to fit together and work together — for greater overall accuracy!





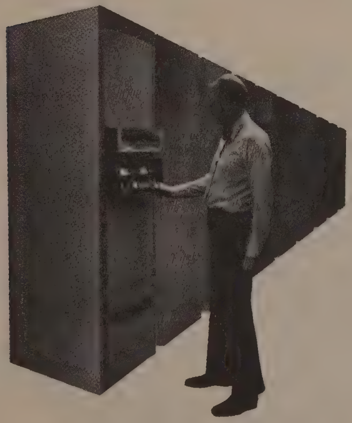
Interfacing with your computer is now easier, too!

If you're using a DEC PDP-11, HP 2100, Varian V-73, Data General NOVA or other similar computers, we already have the interface system ready to install, and we'll even provide the interconnecting cables!

You save time, and eliminate the complex engineering effort that is required to 're-discover' answers to interface problems that we have already solved — and delivered!

Preston has made the investment in computer interface hardware that works with your computer and your software program. Now, when your equipment is delivered, it's ready to be plugged in and put to work!

The largest data acquisition systems are already using Preston's system components:



This computer controlled data acquisition system includes over 500 of Preston's 8300 XWBRC Series Instrumentation Amplifiers and an equal number of 8800 USC Series signal conditioning modules ahead of a high speed 15 bit GMAD-1 Analog-to-Digital Conversion System that includes all the control hardware for interfacing to a 16 bit mini-computer system. The goal of this system is to provide a completely automatic data collection and monitoring capability featuring both software and manual programmed control and providing the ultimate in input-to-output accuracy while operating in a severe common-mode, electrical-noise environment.

This highly sophisticated amplifier-per-channel data acquisition system is to be used in advanced turbine engine compressor development programs for military and commercial aircraft propulsion systems.

For complete information on all of Preston's advanced components for data acquisition systems, examine the more detailed descriptions on amplifiers and ADCs that appear on pages 1•12, 1•13, 1•194 and 1•195 of Volumes 1 of EEM. Then call or write directly to Preston's main office in Anaheim, California. We'll make certain you receive all the information you need.

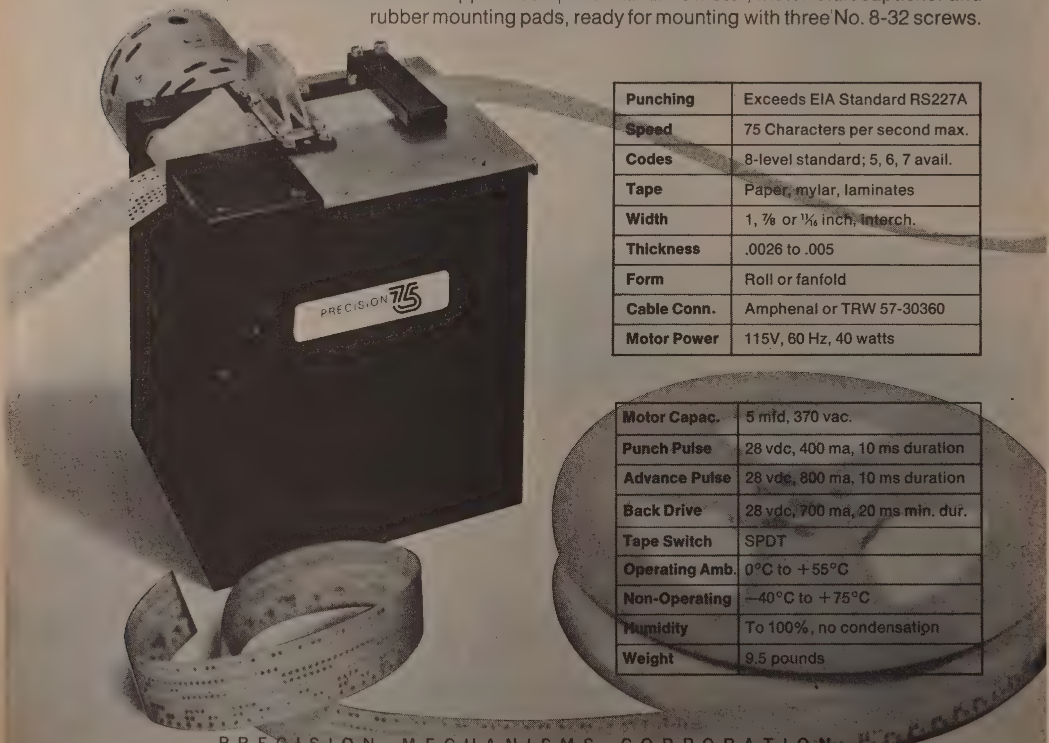
PMC PRECISION 75

The Precision 75 Tape Punch is a 75 character per second tape perforator featuring high reliability, low power requirements and minimal maintenance. It is capable of punching all standard 1, ⅞, and 11/16 inch wide tapes interchangeably.

Its basic elements are motor-powered punch and tape advance drives, an electromagnetic punch selector bank and a reluctance timing pick-off.

Any desired character is punched by applying a 28 vdc pulse to the punch selector bank for each hole of the character. A follow-on pulse activates the tape advance drive which moves the tape into position for the next character. Reference timing for the punch and tape advance pulses is provided by the pick-off.

The Precision 75 is supplied complete with drive motor, motor-start capacitor and rubber mounting pads, ready for mounting with three No. 8-32 screws.



Punching	Exceeds EIA Standard RS227A
Speed	75 Characters per second max.
Codes	8-level standard; 5, 6, 7 avail.
Tape	Paper, mylar, laminates
Width	1, ⅞ or 11/16 inch, interch.
Thickness	.0026 to .005
Form	Roll or fanfold
Cable Conn.	Amphenal or TRW 57-30360
Motor Power	115V, 60 Hz, 40 watts

Motor Capac.	5 mfd, 370 vac.
Punch Pulse	28 vdc, 400 ma, 10 ms duration
Advance Pulse	28 vdc, 800 ma, 10 ms duration
Back Drive	28 vdc, 700 ma, 20 ms min. dur.
Tape Switch	SPDT
Operating Amb.	0°C to +55°C
Non-Operating	−40°C to +75°C
Humidity	To 100%, no condensation
Weight	9.5 pounds

SIGNAL CONDITIONERS

THE SG-11 IS A PLUG-IN MODULE with power supply, balance calibration and monitoring circuits. The power supply circuit offers high temperature and time stability, providing line and load regulation of 0.01%; excitation voltage is adjustable from 0 to 16 volts at 0 to 150 mA. Featured is a self-restoring current limit circuit. All units may be wired for constant-current operation.

The SG-11 has very high isolation to line—under 0.03 pF coupling capacitance from power line to DC output—SG-11 performance approximates battery operation.

All controls are 10 turn potentiometers of very high resolution. Calibration is bipolar single shunt.

Two types of enclosures are available: A 19″ relay rack that permits the mounting of eight units side-by-side and a portable enclosure accepting a single plug-in unit. A plug-in power supply is also available.

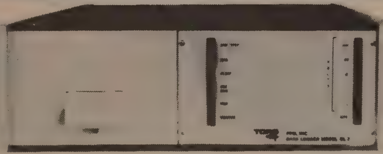
MODEL SG-11 PLUG-IN UNIT (eight shown in rack)	**$187.50**
PORTABLE ENCLOSURE (MODEL SG-11-P as shown)	**$ 39.50**
RELAY-RACK MOUNTING ENCLOSURE (MODEL SG-11-R as shown) with solder terminals only	**$129.00**
RELAY-RACK MOUNTING ENCLOSURE (MODEL SG-11-RC as shown) with MS connectors (mating connectors included)	**$395.00**

THE MODEL SG-16 series (not illustrated) provides lowest-cost strain-gage conditioning. A 20 channel system with common power supply occupies only 5¼ inches of vertical panel space at a total cost of $75 per channel. Amplifier options range from $10 per channel for 10ma galvo drive amplifiers to $100 per channel for low-drift differential amplifiers. Write for Bulletin SG-16.

022
PPM
THERMOCOUPLE MONITORING SYSTEM
MODEL TM-100A

THERMOCOUPLE MONITOR

THE TM 100A SCANS UP TO 100 THERMOCOUPLES, displaying temperature in digital form. A high-low limit circuit compares temperature with preset thumbwheel switches; a lamp matrix displays all out-of-limit channels. Interface provides for auxiliary printout or computer entry of data.



DATA LOGGER

THE MODEL DL-2 IS A COMPLETE DATA ACQUISITION SYSTEM in a compact, portable package. It scans up to 100 differential signals, digitizes them and a thermal printer records their values. Options include floating decimals, internal digital clock, conditioning for thermocouple or strain-gage transducers and punched paper or magnetic tape recording.

Input signals include DC voltage, resistance and frequency. Write for Bulletin DL-2.

Data Logger with 10 Channels	**$2320.00**
Data Logger with 100 Channels	**$3220.00**

PPM
THERMAL DIGITAL PRINTER/TP-10

TP-10

SILENT THERMAL DIGITAL PRINTER

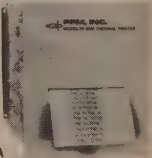
Model TP-10 is a quiet, moderately priced, reliable instrumentation printer with only one moving part. It prints up to 14 columns at 5 lines/second from BCD input signals.

Prints on standard thermal actuated paper . . . excellent legibility.

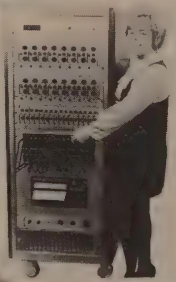
Model TP-10A is a plug-in printer module for OEM applications. All electronics except the power supply are included.

Options for TP-10 include a digital clock card, for recording the time of an event's occurrence, and a digital voltmeter card.

Write or call for prices and Bulletin TP-10.



TP-10A



PPM SYSTEMS

PPM OFFERS CUSTOM SYSTEMS AND SYSTEMS COMPONENTS for data acquisition, process and speed control. PPM Data Acquisition Systems will accept as many as 1000 individual signals; these signals are scanned, digitized and recorded in printed form or on punched or magnetic tape. Alarm outputs are available for signals falling outside of the preset limits. For systems applications we offer several Systems Components, such as: Printers, Scanners, and Digital Clocks.

For comprehensive information, write us or call us collect today.

Our Optical Encoder Handbook will help take the guesswork out of buying encoders.

Need Encoders? Rotary or Linear? Absolute or Incremental? Incandescent Lamps or LED? The objective of this informative handbook is to convey practical knowledge that will assist users to answer these and hundreds of other encoder questions. Renco Corporation offers this handbook—free of charge—to assist you in selecting encoders that are best suited to your particular applications.

Principles of Optical Encoders.
Explains how optical encoders function to generate a digital representation of a motion or a position.

Encoder Design Considerations.
Examines the components and economic variables that are pertinent to the design of optical encoders.

Discs, Codes, and Electronics.
Discusses disc master generation, applicable codes, and electronic output interfaces used in optical encoders.

Understanding Encoder Specifications.
Defines and analyzes typical specification variables, and relates these variables to encoder design considerations.

805/968-1525 TWX 910-334-1180

Incremental and Absolute Encoders.
Explains the functional application and merits of the two approaches.

Linear Encoders.
Discusses the design considerations and functional applications given to this type of encoder.

Modular Encoders and Special Designs.
Explains the economic and performance advantages offered with modular encoders, and the relative merits of specified designs when applicable.

Encoder History and Applications.
Traces the development and usage of non-contact encoders, leading the present-day acceptance of the optical encoder.

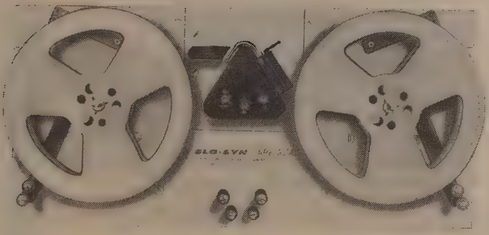
SLO-SYN®
PHOTOELECTRIC TAPE READERS

SLO-SYN Photoelectric Tape Readers combine the dependability of photoelectric design with the proved reliability of SLO-SYN stepping motors. There are no detents, ratchets, belts or gears. Models are available to meet high speed as well as low speed applications.

- Bidirectional with two channel pulse input
- Read all opaque and translucent tapes that have a maximum light transmission of 40%. No adjustments needed.
- Simple, full-view loading
- Long, maintenance-free operation
- Standard 19-inch rack mount

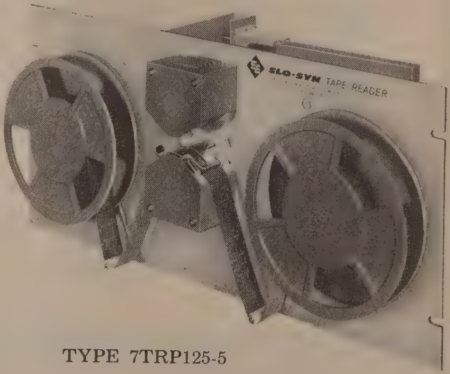
300 CHARACTERS PER SECOND



TYPE 7TRP300

- Reading rate 0 to 300 characters per second asynchronously; 500 characters per second synchronously
- Solid-state LED light source not subject to aging
- TTL, DTL, CMOS compatible with both normal and inverted outputs available
- Integrated circuitry assures reliability
- Reel and fanfold models available

125 CHARACTERS PER SECOND



TYPE 7TRP125-5

- Asynchronous speeds to 125 characters per second
- Normal and inverted outputs
- 5 volt and 15 volt models available
- 5 volt models DTL and TTL compatible
- Models available with or without reeler assembly

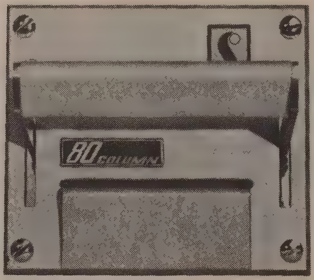
SEALECTRO CARD, BADGE & TAB READERS

10 x 10-10 x 12 BADGE READERS

Completely automatic Badge Readers that accept standard IBM and Friden Type Badge cards in 10 x 10 or 10 x 12 formats. Ideal for personnel identification, production control and process control operations.

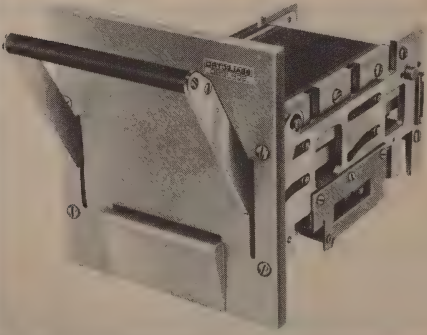
Go/no-go lights immediately indicate if the card is inserted correctly. No contacts actuate until the card is properly inserted. Remote solenoid-operated contacts sense hole patterns and read. Read function is automatically held until feedback from system releases contacts and card is automatically ejected. Flexible output wiring allows bussed or discrete contact interface connections.



12 x 80 CARD READER

The Sealectrocard Card Reader is designed to be completely compatible with all standard 12 x 80 TAB type punched-cards. This unit combines features which provide maximum reliability, convenience and economy in programming. The 12 x 80 Sealectrocard is ideally suited as peripheral equipment for a wide range of computers or as a programming device. Programs consisting of up to 960 bits of information can be read instantly from conventional punched-card formats. Features include:

- Remote contacts with double contact wiping surfaces.
- Positive mechanical lockout if a card is mis-oriented.
- Wide choice terminations.
- Simple, fast operation even by unskilled personnel.



12 x 51 TAB READER

Accepts and reads standard 80 column TAB card, but limits read area to 51 columns, providing 612 bits of information. Ideal for data acquisition in production control and other terminal operations of data processing systems not requiring full 960 point readout.

Completely foolproof. Correct orientation and positioning of card electrically interlocks operating handle eliminating faulty readouts. Card is inserted in insertion slot, handle pulled down to read position, and unit is in operation.

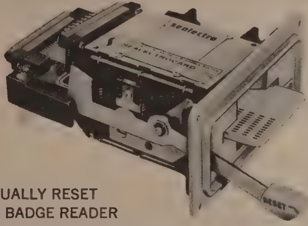
Utilizes same electrical contact assembly as 12 x 80 Reader. Can be bussed vertically or horizontally. It may be used with completely discrete circuitry for each of the 612 points.

SEALECTRO

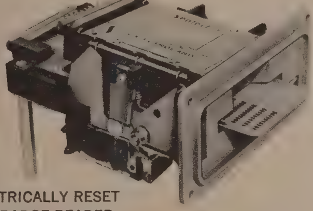
MBR SERIES

Punched Badge Mini-Badge Readers

- A NEW HIGH IN RELIABILITY
- A NEW LOW IN COST
- COMPACT
- MANUAL OR SOLENOID OPERATION
- REMOTE CONTACTS FOR MINIMUM MAINTENANCE
- READS UP TO 12 X 22 FORMAT (264 DATA BITS)
- FULL INTERLOCK FOR BADGE ORIENTATION
- READS PROVEN, RELIABLE, ECONOMICAL HOLLERITH CODE



MANUALLY RESET
MINI BADGE READER



ELECTRICALLY RESET
MINI BADGE READER

At last—the right answer for controlled access, time clock, library, warehouse, parking lot, vending machine, and credit card systems. Reads popular Hollerith code with ultra-reliable, remote switch closures. Dirt, grease, grime — makes no difference. No photo-optics to clean and pamper. No tricky auxiliary electronics. These readers just work and work. And the price is a fraction of what you'd think you would have to pay for this reliability. Positive orientation check eliminates mis-reads. Available in manual or solenoid operation. Models now ready for ID badge or credit-card sizes, with data areas from 10 x 10 to 12 x 22.

Here's the missing link for that data acquisition system you're building or planning—READY RIGHT NOW AND AT THE RIGHT PRICE! Send for complete details . . .

Specifications

Mechanical Specification

Operation: Manual or manual and electrical reset
Number of Columns: 10/12/20/22
Number of Rows: 12
Operating temperature range: +5°C to +55°C
Humidity: 30% to 70% relative
Interlocks: Card fully inserted
Card correctly orientated
Mounting: Front of panel and rear support
Weight: Manual Model: 1 lb.
Electrical reset model: 2 lbs.
*Solenoid Voltage: 24, 110, 230 Volts, 50-60Hz
*Solenoid Power Consumption: 430 V.A. Initial
17 V.A. Final Holding.

*Electrical reset model only.

Contact Specification

Electrical Life: 10^6 operations minimum
Mechanical Life: 10^6 operations minimum
Voltage rating: Up to 50 Volts DC
Current rating (switching): 100 mA (resistive load)
Current rating (static): 250 mA
Loop circuit resistance: Less than 300 m Ohms after 10^6 operations
Overall Size: Manual reset model: 5″ wide x 2.60″ high x 8″ long (including 2″ lever)
Electrical reset model: 5″ wide x 4.13″ high x 6″ long

Badge Specification

Type II (F), Type III (M) or Sealectro Standard (H) Cut Corner Badges.

All specifications are typical at 25°C nominal power supply unless otherwise indicated.

1. ABBREVIATIONS
   NA – Not Applicable
   BIN – Binary
   OBIN – Offset Binary
   BCD – Binary Coded Decimal
   2SC – Two's Complement
2. Differential Nonlinearity.
3. Full Scale T.C. using internal feedback resistor.
4. 1 TTL Load equals −1.6 mA max. at V_{IN} = +0.4 V (Lo) and 40 µA max. at 2.4 (Hi).
5. All control inputs, outputs, and data output lines are compatible with standard DTL/TTL levels. Logic state switch '0' is <+0.8 V; logic state switch '1' is >+2.0 V.
6. Operating temperature range for all models, except model 4002 and the MIL-Grade Microcircuits, is 0°C to +70°C with a storage temperature range of −55°C to +100°C. Operating temperature range for model 4002 is +15°C to +45°C.
7. Operating temperature range for the MIL-Grade Microcircuits is −55°C to +125°C with a storage temperature range of −65°C to +155°C. Industrial temperature versions are available. Consult factory for details.

TELEDYNE PHILBRICK Digital/Analog Converters

Philbrick D/A converter modules are self-contained, low-profile units accepting 8 to 14-bit digital inputs and providing either a voltage or current output. With built-in reference, high speed switching, and a fast settling amplifier in voltage models, each converter is fully specified to minimize application difficulties and designed for long-term accuracy and reliability.

TELEDYNE PHILBRICK

Multiplexers

Philbrick's new line of multiplexers offers two CMOS compatible units, and one buffered version. In a data acquisition system these devices will sequentially switch up to 16 analog inputs to a common output, for digitizing by a single Sample-Hold and ADC. Model 4551, an 8-channel differential, is an ideal choice for switching signals from strain gages, thermocouples, or bridges.

Model Number	Number of Channels	R_{on}	Input Impedance	Buffered Output	Settling Time	Switching Time	Over-voltage Protection	DTL/TTL CMOS Compatible	Power Requirements	Package Size Inches (Centimeters)
4550	16 Single-ended	NA	3 x 10⁸ Ω	Yes	3 μsec max.	**	Yes	DTL/TTL	±15 V @ 75 mW	2 x 2 x 0.4 (5.08 x 5.08 x 1.02)
4551	8 Differential	1.5 KΩ	NA	No	NA*	1 μsec	Yes	Yes	±15 V @ 7.5 mW	28 Pin DIP
4552	16 Single-ended	1.5 KΩ	NA	No	NA*	1 μsec	Yes	Yes	±15 V @ 7.5 mW	28 Pin DIP

NA: Not Applicable
*Determined by external circuit
**Included in settling time

Sample-Hold Amplifiers

A Sample-Hold Amplifier is predominently used in front of a Successive Approximation ADC to "Hold" analog data at a constant value during the ADC's conversion.

Philbrick's line of Sample-Hold modules offers a range of price and performance for most data conversion applications and Data Acquisition Systems.

High Speed Amplifiers

Model Number	Open Loop Gain	Bias Current	E_{OS} TC	Full Power Frequency
1421	50 k	50 pA	10 μV/°C	50 kHz
1430	500 k	150 pA	25 μV/°C	5 MHz
1434	15 k	20 pA	50 μV/°C	1 MHz
4253	1-5000	10 pA	1 μV/°C	5 kHz

Philbrick's Operational and Instrumentation Amplifiers have specialized performance characteristics to suit most data acquisition systems.

Measuring low level signals in the presence of high common mode voltages is a prime application for the very low drift FET, 4253 Instrumentation Amplifier.

Philbrick also offers Operational Amplifiers for converting current output DAC's to voltage output, signal summation, analog filters, and buffers.

These versatile devices can be used to condition analog data for two wire, long distance transmission. The TTL pulse train output of the V/F converter. All Philbrick V/F and F/V converters feature the high linearity and resolution necessary to ensure precision operation in the most demanding applications.

Signals that must be transmitted in the presence of high common mode voltages can be accomodated by using a photo isolator in combination with the converters. Depending on the isolator chosen, voltages greater than 2,500 volts can be safely handled.

FEATURES

- Small Size (Encapsulated Modules)
- Short Circuit Protection
- Excellent Line and Load Regulation
- 25 mA to 1000 mA Output Current
- No RFI Generated or Transmitted
- Versatile and Trimmable (Models 2203/2204)
- Custom Modifications Available

COMMON SPECIFICATIONS - MODULAR P.C. AND CHASSIS MOUNTED SUPPLIES

Input Voltage - 115 VAC @ 50-400 Hz (For 230 VAC operation add -21 suffix to model number. No extra charge)
Output Accuracy - ±1%
Warm-up Drift - 50 mV
Warm-up Time - 1 hour

SHORT-CIRCUIT PROTECTION

All Philbrick Power Supplies have short-circuit protection. Models 2203, 2204, 2206, 2208, and 2209 have current fold back protection. All other supplies have current limiting to prevent supply damage up to 72 hours. The DC-to-DC supplies combine current limiting with thermal shut down to prevent supply damage for up to 8 hours at a +71°C ambient temperature.

TAURUS

World Leaders in Card Readers

FEATURING HIGH RELIABILITY

A Complete Line of
Punched Card Readers
for Static and
Serial Programming

APPLICATIONS

COMMERCIAL USES: Automatic test equipment, batching, automated warehousing, data processing, process control, flight simulators etc.

MILITARY USES: Ground checkout equipment, programming, testing, component testing, simulators, etc.

STANDARD SPECIFICATIONS

Cards—IBM, Rem. Rand or others.

No. of Switches—10 to 960—(Form A, B or C).

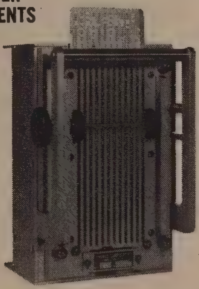
Electrical—Dry Circuit to 3 AMPS.

MODEL M-4

NEW!

FULL IBM CARD STATIC READER
SMALLER — MANY IMPROVEMENTS

Reads up to 80 columns, or 960 switches, (complete IBM card). Most compact switching array available. Reads indirectly for maximum reliability. After insertion, punched hole has a closed switch, no hole an open switch. Switch reliability 100,000 cycles. Mechanical reliability 500,000 cycles.

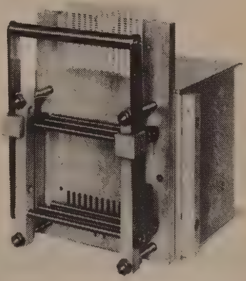


MODEL JM-4

NEW!

SMALLER —
MANY IMPROVEMENTS
STATIC READER
FOR ONE HALF OF
AN IBM CARD

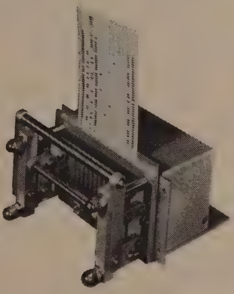
Reads up to 40 columns, or 480 switches, of an IBM card. After insertion, punched hole has a closed switch, no hole an open switch. Switch reliability 100,000 cycles. Mechanical reliability 500,000 cycles.



NEW!

MODEL CM-20

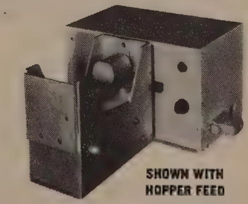
Reads up to 20 columns or 240 switches. Specifically designed for stacker cranes. Same switches as in M-4 and JM-4.



NEW!

MODEL 610-P

SERIAL READER
PHOTO-ELECTRIC



SHOWN WITH
HOPPER FEED

Reads standard 80-column, 12-row cards, serially, column by column, 40 columns per second or less. For on line computer, remote transmission, interfaced with other machines, numerical control, card duplication or correction. Sizes 7″ High x 16¾″ Wide x 7½″ Deep. Automatic card feed available for sequential feeding of up to 200 cards.

Also Teflon Terminals and Printed Circuit Board Guides

CUSTOM BUILT UNITS ARE OUR SPECIALTY. We will fill your requirements in spacing, switch action, number of switches and any other special needs, and will determine the most economical size and type for your operations. **Send for 1975 Catalog.**

TAURUS CORPORATION

VERNITECH
DIVISION OF VERNITRON CORPORATION

NOW AVAILABLE FOR THE FIRST TIME, REPAIRABLE AND NON-REPAIRABLE SYNCHRO CONVERTER MODULES, PLUS CONVERTERS IN BOARD CONFIGURATION.

SYNCHRO/RESOLVER TO DIGITAL CONVERTERS

Hz	L-L Voltage	Resolution	Power Requirements	Size (Inches)	Model No.	Available Options
60	90	14 Bit Binary	±15 VDC; +5V; 115 VAC Ref.	2⅝ x 3⅛ x .82 (plus XFRMR)	VSD-609SM	1. Board Configuration
60	90	0-3599 BCD	±15 VDC; +5V; 115 VAC Ref.	5 x 3¾ x 1	VSD-609SM-D	2. Self Contained Power Supplies
400	11.8	14 Bit Binary	±15 VDC; +5V; 26 VAC Ref.	2⅝ x 3⅛ x .82	VSD-401SM	3. −55°C to +85°C Operating Temperature 4. Serial Output
400	11.8	0-3599 BCD	±15 VDC; +5V; 26 VAC Ref.	5 x 3¾ x 1	VSD-401SM-D	5. ± BCD Output
400	90	14 Bit Binary	±15 VDC; +5V; 115 VAC Ref.	2⅝ x 3⅛ x .82	VSD-409SM	6. Multi-speed Conversion
400	90	0-3599 BCD	±15 VDC; +5V; 115 VAC Ref.	5 x 3¾ x 1	VSD-409SM-D	7. Multi-channel Conversion

ALL VERNITRON CONVERTERS WILL:
1. Operate over 0-70°C range.
2. Have a Digital Interface with DTL or TTL Compatible Logic.
3. Accuracy — ±4 minutes ±1.19
4. Track at 360°/second (400Hz), 180°/second (60Hz).
5. Be repairable in the field; if ever necessary.

DIGITAL TO SYNCHRO/RESOLVER CONVERTERS

Hz	Output Voltage	V.A. Output	Accuracy	Power Requirements	Size (inch)	Model No.	Available Options
60	90	2	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 2*	VDS-609SP-2	1. Modular Configuration
60	90	5	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 1**	VDS-609SP-5	2. Self Contained Power Supplies
400	11.8	2	±1 LSB	±15 VDC; +5 VDC; 26 VAC Ref.	5 x 4 x 2	VDS-401SP-2	3. −55°C to +85°C Operating Temperature
400	11.8	5	±1 LSB	±15 VDC; +5 VDC; 26 VAC Ref.	5 x 4 x 1**	VDS-401SP-5	
400	90	2	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 2*	VDS-409SP-2	4. Serial Input
400	90	5	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 1**	VDS-409SP-5	5. Multi-channel Inputs

ALL VERNITRON CONVERTERS HAVE:
1. 12 Bit parallel binary coded angle input (MSB = 180°, . . .).
2. Digital interface compatible with DTL or TTL logic.
3. Field repairability, if ever necessary.
4. Storage Registers available at no extra cost.

* Transformers to be mounted externally.
** Transformers, power transistors, and heat sinks to be mounted externally. Consult factory for required volume.

SPECIAL CONVERTERS

Type Converter	Part Number	Description
Solid State Synchro Signal Amplifier	VSA-101	Input: 3 Wire Synchro Data, 90V L-L, 60 or 400 Hz; 115V Reference Output: 3 Wire Synchro Data, 90V L-L, 60 or 400 Hz Channels: Two, each completely isolated Accuracy: Plus/Minus 6 minutes of arc Size: Standard 19″ Rack (19″ x 6″ x 20″) Misc.: Self-contained Power Supplies; Short Circuit Protected; Automatic Cutoff of DC Supply if Overload exists; Overload Indicator
Synchro/Resolver to Linear DC Converter	VSDC-401-SP VSDC-409-SP VSDC-609-SP	All parameters identical to those of the Synchro/Resolver to Digital converters, except: 1) Accuracy — ±10′ at room temperature 2) Digital output also available in addition to DC 3) Output 0-10 VDC, 0-5 VDC, 0-±10 VDC, 0-±5 VDC
Synchro/Resolver to Sine-Cosine DC Converter	VSDC-401-SP-A VSDC-409-SP-A VSDC-609-SP-A	All parameters identical to those of the Synchro/Resolver to Digital converters, except: 1) Accuracy — ±10′ of arc at room temperature 2) Output ranges same as Synchro to DC above, except in sine-cosine form
Sine-Cosine DC to Synchro Converter	VDCD-401-SP-A VDCD-409-SP-A VDCD-609-SP-A	All parameters identical to those of the Digital to Synchro/Resolver converters, except: 1) Accuracy — ±10′ of arc at room temperature (Dependent upon load) 2) Input Levels 0-10 VDC, 0-5 VDC, 0-±10 VDC, 0-±5 VDC

STILL OTHER PACKAGES AVAILABLE AT VERNITECH:

DC TO SYNCHRO • STANDARD SERVO PACKAGES • SUB-SYSTEMS, WITH DISPLAYS AND POWER SUPPLIES
DIGITAL TO SHAFT POSITION CONVERTERS • UP-DOWN COUNTING SERVO PACKAGES • TORQSYN-ENCODER PACKAGES

NOTES:

1. Standard units have clockwise rotation for increasing count as viewed from shaft end. Units are available with counter clockwise rotation.
2. Internal isolation diodes available for time-sharing.
3. Operating Temperature: −55°C to +85°C. Units available to +125°C on request.
4. For dimensions of size 18 unit, with connectors, see below.

OPTICAL ABSOLUTE ENCODER ENVIRONMENTS: #1

Temp.: 0°C to 70°C.
Humidity: 0 to 95% R.H. non-condensing.
Shock: 5G's 11 ms.
Vibration: 3G's 5 to 500 Hz.
Construction: Dustproof case, stainless shafts and bearings, anodized aluminum body and cover.

ENCODER ENVIRONMENTS: #2

Temp.: 54° to +85°C.
Humidity: No damage to 100%.
Shock: 20G's at 10 ms.
Vibration: 10G's 5 to 500 Hz.

OPTIONS

- 12-15V Operation.
- Open Collector Outputs.
- Built-in Up-Down Separator for Quadrature Encoder.
- Built-in Direction Indication by Voltage Level Output for Quadrature Encoders.
- Reversed Direction for Increasing Count at Extra Cost.
- Differing Resolutions at Extra Cost.
- Terminations by Solder Pin Header or Flat Cannon Connector.
- Modifications to Shaft.
- Protective Housing for Severe Environments, Fluid Spray Submergence, Shaft Side Loads, End Loads Available at Extra Cost.

300 Marcus Boulevard, Deer Park, New York 11729 / (516) 586-5100, TWX: 510-227-6079

VERNITECH
DIVISION OF VERNITRON CORPORATION

All Vernitech contacting absolute encoders have non-ambiguous outputs whether Binary, 8421 BC Altitude Reporting Code or Gray Code. Many basic patents in the field have been granted to Vernitec over the past 20 years.

Continued development has increased reliability and useful life as requirements evolved makin these encoders suitable for a wide variety of applications from satellites to instrumentation system to process control.

They are current, up to date and being designed into state of the art equipment such as fuel management systems on the DC-10; frequency synthesizers and automatic tuning elements in telecommunication systems.

NOTES

Type of termination affects weight and length overall.

△ Front mount available in 3 configurations, No Major Pilot and Minor Pilot. .625, .500 or .440 DIA.

TP Direction of increasing count controlled by using either one of two leads from slowest changing bit.

☐ Either direction of increasing count available. Must be specified when ordering.

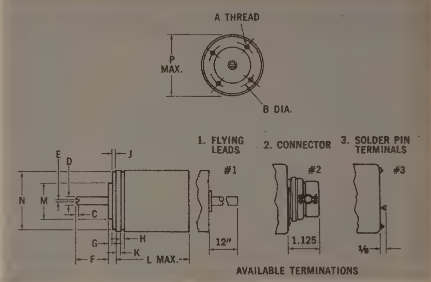
○ Encoder provides both digits and complements. Reverse direction by using either as system digit. Selecting encoder digit causes CCW increasing count; selecting complement; clockwise in the binary series.

★ Dimensions held to +.0000, −.0003.

ORDERING INSTRUCTIONS

Always specify Model Number plus Style Number.
Example: Model ADC 13 BNRY-E/L (from line on matrix) Style S4C — CCW

Teflon Seal	S
Length of Shaft in ⅛ increments	4
Electrical Termination — connector (C) header (H) or flying leads (F)	C
Direction of increasing count looking at shaft end	CCW



AVAILABLE TERMINATIONS

AVAILABLE TERMINATIONS

1. Flying Leads (Teflon Wire)
2. Connector (Both Halves Supplied by Vernitech)
3. Solder Pin Terminals (Header)

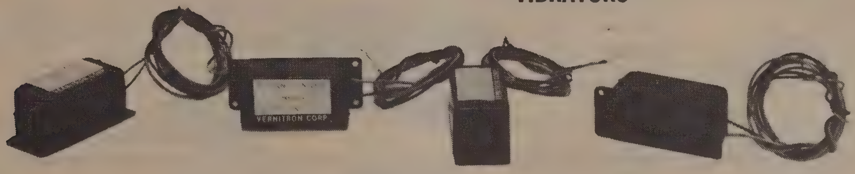
VERNIDEX MINIATURE

Vernitech has fully qualified hermetically sealed units to military specs with regard to:

Altitude	Shock	Fungus	Radio Interference
Temperature	Salt Spray	Explosion	Life
Vibration	Sand/Dust	Acceleration	Fogging

ALL MODELS AVAILABLE WITH FULL LOGIC SELF-CONTAINED—ACCEPTS BCD INPUT

VIBRATORS



The VERNIBRATOR is an electro-mechanical vibrating device originally designed to eliminate stiction from instruments such as altimeters, etc. The Vernitech vibrator produces exceptionally High-G forces over 10,000 hours of failure and maintenance-free operation, while consistently attaining reliable low-voltage operation.

Consult the factory for either standard or custom-made designs.

FREQUENCY TRANSDUCER MONITOR

Model 3510 (55-65 Hz)
Model 3511 (380-420 Hz)

Output: 0-1 or 0-5 VDC
Accuracy: 1%
Linearity: .05% center Freq.
Temp.: −20°C to +71°C
Size: 4½″ x 1½″ x 3″

FREQUENCY TRANSDUCER CONTROLLER

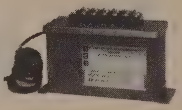
Model 3750 (55-65 Hz)
Model 3751 (380-420 Hz)

Output 1: 0-1 or 0-5 VDC
Output 2: Control - Hi and Lo limits adjustable through entire Range
Accuracy: 1%
Linearity: .05% center Freq.
Temp.: −20°C to +71°C
Size: 6½″ x 1½″ x 3″

A.C. CURRENT CONTROLLER

Model 4015
Thru-Current Ranges:
0-1 Amp 0-10 Amp 0-50 Amp
0-2 Amp 0-20 Amp 0-100 Amp
0-5 Amp

Excitation: 115 or 220 VAC 50-400 Hz
Control Point: .1A to 100A (adjustable)
Repeatability: ±1%
Temp.: −20°C to +71°C
Size: 4½″ x 1½″ x 3″



A.C. CURRENT MONITOR/ CONTROLLER

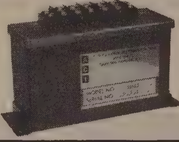
Model 4020 Single Trip Point
Model 4025 Adj. Band Limits

Excitation: 115 or 220 VAC 50-400 Hz
Control Point: (adjustable)
Repeatability: ±1%
Output 1: 0-1 or 0-5 VDC
Output 2: Solid State or Relay
Temp.: −20°C to +71°C
Size: 6½″ x 1½″ x 3″

A.C. VOLTAGE TRANSDUCER MONITOR

Model 9001 (60 Hz)
Model 9002 (400 Hz)

Input: 90-140 VAC
Output: 0-1 or 0-5 VDC
Accuracy: 1%
Response: less than 0.25 Hz
Temp.: −20°C to +71°C
Size: 4½″ x 1½″ x 3″



A.C. VOLTAGE TRANSDUCER CONTROLLER

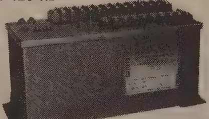
Hi and Lo Control Limits
Model 9601 (60 Hz)
Model 9602 (400 Hz)

Input: 90-140 VAC
Output 1: 0-1 or 0-5 VDC
Output 2: Solid State or Relay
Accuracy: 1%
Response: less than 0.25 Hz
Temp.: −20°C to +71°C
Size: 6½″ x 1½″ x 3″

POWER LINE MONITOR/ CONTROLLER

Model 4301
1φ Voltage and Frequency
Model 4302 (60 Hz or 400 Hz)
3φ Voltage and Frequency

Voltage Band: 100-130 VAC
Freq. Band: 50-70 Hz or 380-420 Hz
Hi-Lo Limits: Adj. to any points within Band
Output Relay: SPDT or 3PDT 10 Amp
Time Delay: 250 MSEC or Adj. Option
Temp.: −20°C to +71°C
Size: 7½″ x 3″ x 3½″



WATTS/POWER FACTOR TRANSDUCER CONTROLLER

Model 9401-9405

Input: 90-150 & 160-250 VAC 0-500 W to 0-100 kW
Output 1: 0-1 or 0-5 VDC
Output 2: Solid State or Relay
Temp.: −20°C to +71°C

CURRENT, VOLTAGE AND POWER INSTRUMENTATION

CURRENT SENSORS D.C.

American Aerospace Controls' D.C. current sensors are used for measurement and control applications requiring an accurate high level D.C. output signal proportional to the input current. Most models feature "pass thru hole" construction for the power cable providing complete electrical isolation of the output. Models are available in grades suitable for industrial and military applications.

CURRENT SENSORS MOVEABLE JAW TYPE

A complete line of moveable jaw type current sensors are available for D.C., A.C. and combination D.C. and A.C. current measurements. Models cover both military and industrial applications. These transducers are well suited for diagnostic testing of automotive electric circuits. Uses include measurement of starter current, battery drain, and generator-alternator current. Fast response units permit accurate analysis of current wave forms. Output voltage can be indicated on a meter, scope or recorder.

CURRENT SENSORS BIDIRECTIONAL

Bidirectional current sensors are used to sense either D.C. currents whose polarity or direction of flow may reverse or A.C. currents within the response capabilities of the device. The electrically isolated output signal duplicates the current wave form. Because of their fast response characteristics, these sensors may be used for pulse measurements and controls.

CURRENT SENSORS A.C.

A broad line of "pass thru hole type" A.C. current sensors are available for measurement or control of current at standard line frequencies or over a broad frequency spectrum. The sensors produce a high level D.C. signal output that is electrically isolated from the current line. Power dissipation is negligible and economy models of these sensors may be used as replacements for shunts.

A.C. CURRENT CONTROLLERS

A.C. Current Controllers are adjustable devices that detect a set current level and produce a relay closure or opening when the set current level is exceeded. These ruggedly built industrial control devices utilize a current to voltage "thru hole" toroidal transformer to sense the line current. The (CT) current transformer's output is fed to a control box which contains the signal conditioning circuitry and relay. Uses include overload and underload detection, ground fault monitoring, power failure, etc.

MTRS 402

APPROXIMATE DIMENSIONS, NOT SUITABLE FOR CONSTRUCTION

MTRS-402 RECEPTACLE

The MTRS-402 is the basic industrial receptacle built by ARROW-HART exclusively for TEMA series timers and MT series plug-in relays. It is a top quality receptacle made of one-piece molded construction, with flat; stab-in connectors for broad contact surfaces. The back is totally enclosed, eliminating the need for additional insulation when mounting on a panel. Rubber snubbers mounted on the back minimize transmission of vibration to the timer. Screw-type terminal connections are clearly marked by embossed numbers on the molded base. The combination of heavy retaining prongs and mounting screws assures the timer will not vibrate loose under severe conditions.

ELECTRONIC TIME DELAY RELAYS

ARROW-HART offers a line of dependable solid state time delay relays. These combine advantages of solid state circuitry with rugged packaging. Both **delay on energization timers** and **delay on de-energization timers** are available. They are offered in several timing ranges and mounting configurations.

SURFACE MOUNT TYPE

These timers do not require a receptacle and are designated simply by adding an "S" to the catalog types (TEMAS). The relay is front-wired and is equipped with quick-connect terminals.* Rubber snubbers on the base assure firm mounting, and reduced transmission of machine vibration to the timer.

PLUG-IN TYPE

TEM series timers are primarily designed to plug into ARROW-HART's Catalog Number MTRS-402 receptacle. The receptacle is an exceptionally sturdy industrial-type unit of one-piece molded construction. It is equipped with flat stab-in connections having broad contact surfaces to assure positive contact. Screw-type terminal connections are clearly marked for easy identification. Rubber snubbers minimize transmission of machine vibration to the timer.

These timers are designed so that front panel mounting can be obtained. The potentiometer retaining nut secures the timer to panels of 1/16 inch or less.

NEMA 1 FACTORY ASSEMBLED OR KIT

Available factory assembled, including timer, or for field assembly. The field assembly kit includes plug-in receptacle mounted in NEMA 1 enclosure and will accommodate any TEM series timer.

REMOTE TIME ADJUSTMENT

TEM series timers are available with remote time adjustment. When remote control is required, the potentiometer and graduated dial label is packaged unassembled.

INDUSTRIAL MOUNTING TIMERS (Continued)

ON-DELAY MODELS

ON-DELAY: Delay on Energization Timers

When input voltage is applied, the output contacts will transfer after a pre-selected time delay. Removal of this input voltage will return the contacts immediately to their de-energized state. If an application requires reset before the timer has completed its delay, the timing capacitor may be discharged electronically.

A major advantage is that repeated accuracy is assured on subsequent cycles. A typical application would be one in which the timer was set to time out just after an event, but was reset by the event. If the event didn't occur, the timer would be allowed to time out and sound an alarm, etc.

OPERATION

Type TEMA is ON-DELAY time delay relay. When input power is applied, the output contacts will transfer after a pre-selected time delay. This delay is fully adjustable by a potentiometer. Removal of input voltage will return output contacts to their de-energized state. Electronic Discharge which discharges the timing capacitor if relay is reset before timing out is standard.

Functional Description — Two Form "C" ON-DELAY Contacts.

1. Adjust potentiometer for required time delay.
2. Apply input voltage to terminals #1 and #2.
3. ON-DELAY contacts transfer after time elapses.
4. Contacts remain transferred until input voltage is removed.

OPERATION

Type TEMI is identical in operation to type TEMA with the exception that there is an extra relay which transfers instantaneously upon application and removal of power.

Functional Description—Two Relays—Two Form "C" ON-DELAY Contacts and Two Form "C" Instantaneous Contacts.

1. Adjust potentiometer for required time delay.
2. Apply input voltage to terminals #1 and #2.
3. Instantaneous contacts transfer immediately and ON-DELAY starts for timed contacts.
4. ON-DELAY contacts transfer after time elapses.
5. All contacts remain transferred until input voltage is removed.

OFF-DELAY: Delay on De-energization Timers

For these timers, input voltage is maintained, and a N.O. isolated input control contact is required. When this contact is closed, the timer relay contacts transfer immediately. When the control contact is opened, the time delay contacts will transfer back to their de-energized state after a preselected time delay.

OPERATION

The TEMR is an OFF-Delay time delay relay. Input voltage is maintained and a N.O. isolated contact is used. When the contact is closed, the timer contacts transfer immediately. When the isolated contact is opened, the timer contacts will re-transfer after the OFF-DELAY time elapses.

Functional Description—One Relay—Two Form "C" OFF-DELAY Contacts.

1. Adjust potentiometer for required time delay.
2. Maintain input voltage to terminals #1 and #2.
3. Close isolated control which will transfer contacts immediately.
4. Open isolated control. This begins OFF-DELAY.
5. OFF-DELAY contacts retransfer after time elapses.
6. Repeat steps 3 and 4 to recycle.

OPERATION

Type TEMRI operation is identical to type TEMR except there is an extra relay which pulls in and drops out instantaneously with closure and opening of isolated contact.

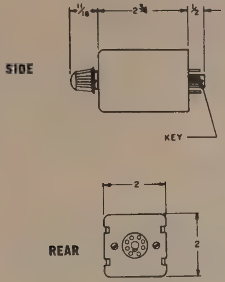
Functional Description—Two Relays—Two Form "C" OFF-DELAY Contacts and Two Form "C" Instantaneous Contacts.

1. Adjust potentiometer for required time delay.
2. Maintain input voltage to terminals #1 and #2.
3. Close isolated control which will transfer timed contacts and instantaneous contacts immediately.
4. Open isolated control. This will re-transfer the instantaneous contacts immediately and begin the OFF-DELAY.
5. OFF-DELAY contacts re-transfer after time elapses.
6. Repeat steps 3 and 4 to recycle.

ARROW-HART INC. / INDUSTRIAL CONTROL PRODUCTS / 103 HAWTHORN STREET / HARTFORD, CONN. 06106 / (203) 249-8471

Arrow Hart TIMERS

OCTAL BASE TIMERS / TEP SERIES



REMOTE TIME ADJUSTMENT

TEP series timers are available with remote time adjustment. When remote control is required, the potentiometer and graduated dial label is packaged unassembled.

ON-DELAY: Delay on Energization Timers

When input voltage is applied, the output contacts will transfer after a pre-selected time delay. Removal of this input voltage will return the contacts immediately to their de-energized state. If an application requires reset before the timer has completed its delay, the timing capacitor may be discharged electronically.

ELECTRONIC TIME DELAY RELAYS

ARROW-HART offers a line of dependable solid state time delay relays. These combine advantages of solid state circuitry with rugged packaging. Both **delay on energization timers** and **delay on de-energization timers** are available. They are offered in several timing ranges and mounting configurations.

Electronic timers are used most effectively in applications requiring a high degree of timing accuracy, and high cycling rates. However, their competitive cost makes them ideal for any application.

The use of solid state circuits in place of electro-mechanical timing components greatly extends the useful life of timers. They are now capable of millions of operations without failure.

Typical applications include machine tool sequencing, timing functions on automated equipment, and time delays on equipment that requires a warm-up period.

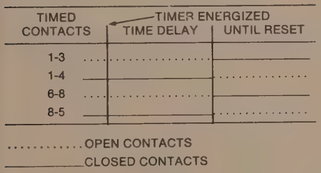
TEP — OCTAL PLUG-IN TYPE

TEP series timers are designed for use with a standard octal socket. The base and center locating pin are of one piece molded nylon construction, which affords greater resistance to breakage. ARROW-HART's method of internally staking and soldering wire leads to the solid connector pins assures connections that are far superior to the standard hollow-pin — blind soldering method. These timers are designed so that front panel mounting can be obtained. The potentiometer retaining nut secures the timer to panels of 1/16 inch or less.

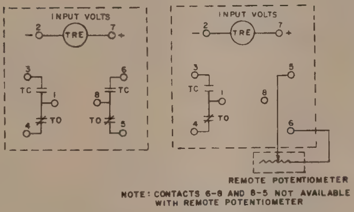
OFF-DELAY: Delay on De-energization Timers

For these timers, input voltage is maintained, and a N.O. isolated input control contact is required. When this contact is closed, the timer relay contacts transfer immediately. When the control contact is opened, the time delay contacts will transfer back to their de-energized state after a preselected time delay.

ON-DELAY MODELS / TEP SERIES



FUNCTION DIAGRAM



NOTE: CONTACTS 6-8 AND 8-5 NOT AVAILABLE WITH REMOTE POTENTIOMETER

LOCAL CONTROL   REMOTE CONTROL

WIRING DIAGRAM

OPERATION

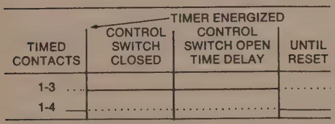
Type TEP relays are ON-DELAY time delay relays. When power is applied, the output contacts will transfer after a pre-selected time delay.

This delay is fully adjustable by a potentiometer. Removal of input voltage will return output contacts to their de-energized state. Electronic Discharge which discharges the timing capacitor if relay is reset before timing out is standard.

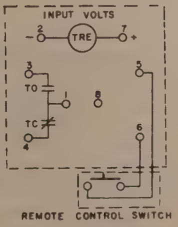
Functional Description—One Relay—Two Form "C" ON-DELAY Contacts.

1. Adjust potentiometer for required time delay.
2. Apply input voltage to terminals #2 and #7.
3. ON-DELAY contacts transfer after time elapses.
4. Contacts remain transferred until input voltage is removed.

OFF-DELAY MODELS / TEPR SERIES



FUNCTION DIAGRAM



LOCAL CONTROL

WIRING DIAGRAM

Remote Control not Available on Type TEPR

OPERATION

The TEPR is an OFF-DELAY time delay relay. Input voltage is maintained and a N.O. isolated contact is used. When the contact is closed, the timer contacts transfer immediately. When the isolated contact is opened, the timer contacts will re-transfer after the OFF-DELAY time elapses.

Functional Description—One Relay—One Form "C" OFF-DELAY CONTACT.

1. Adjust potentiometer for required time delay.
2. Maintain input voltage to terminals #2 and #7.
3. Close isolated control which will transfer contacts immediately.
4. Open isolated control. This begins OFF-DELAY.
5. OFF-DELAY contacts retransfer after time elapses.
6. Repeat steps 3 and 4 to recycle.

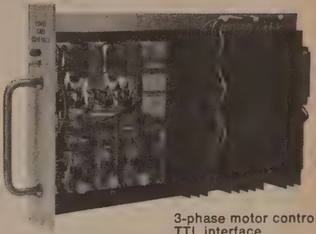
We specialize in engineering and manufacturing

Custom Controls

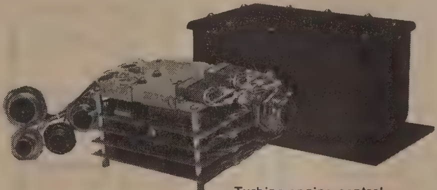
If you're looking for a custom designed solid-state electronic control we would like to talk to you.

Over the past 19 years we've saved countless customers time and effort by applying our design and manufacturing expertise to their control applications. The know-how we have developed during this time has enabled us to produce sophisticated designs to meet military specifications with extreme environments, as well as controls for commercial/industrial applications.

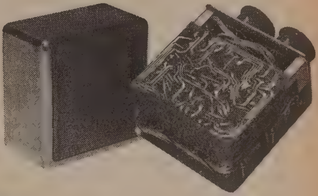
A condensed listing of our general product capabilities is shown below. Call us first the next time you need a custom control. If we can't help you we'll try to tell you who can.



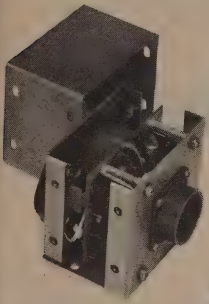
3-phase motor control, TTL interface.



Turbine engine control.



Airborne turbine engine control.



Airborne light dimmer.

Aircraft smoke detector.

Fault current detector.

CONTROLS	Compact solid-state analog and digital units for . . . turbine engine start, run, and shutdown command . . . RPV launch, steering, destruct, and recovery systems . . . electro-mechanical actuator positioning and synchronization.
DETECTORS/SENSORS/ SENSING RELAYS	Voltage, current, frequency, temperature and light-sensing for . . . jet engine speed warnings . . . aircraft cargo smoke detection . . . power phasing . . . over-current protection.
TIMING DEVICES	Time delays from microseconds to hours for . . . missile arming and launching . . . parachute deployment . . . commercial and military system sequencing . . . satellite programming . . . high-noise surroundings.
CONVERTERS/INVERTERS	DC/DC, AC/DC, DC/AC conversion for . . . computer systems . . . geophysical survey equipment . . . integrated circuits . . . radar and sonar power.
FLASHERS/DIMMERS	Solid-state short-circuit-proof flashers and high-efficiency dimmers.
SPECIAL ITEMS	An inventory of proven circuits and packages . . . directly suitable for new applications, or . . . adaptable with slight modifications to fit the most exacting requirements.
POWER SUPPLIES	Multiple and single output units, using high-speed switching, in custom configurations for . . . computer, military, and industrial applications. **See EEM Power Sources Section 4000 for Autronics' Custom Power Supply Capabilities.**

Call us first . . . we'll put our know-how to work for you.

BEEDE

Panel Meters
Pyrometers
Control Meter-Relays
Meter Movements

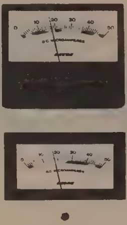
New Beede CERTRAK™ Panel Meters

±1% or ±½% tracking certificate with each meter

Beede is the first panel-meter manufacturer to certify the tracking accuracy of its products. Each Certrak™ meter is shipped with an individually signed certificate of tracking accompanied with a printout of readings taken at every numbered scale division. Certificates of ±1% or ±½% tracking accuracy are available.

New shielded-bar taut-band movement. In conjunction with the new Certrak™ panel meters, Beede announces its new ultra-sensitive shielded-bar taut-band meter movement. All Beede panel meters containing this movement qualify under the Certrak 1% certification program. Sensitivities from 0-10μA to 0-25A are in stock for immediate shipment; stock voltmeters are 0-10mV to 0-300V. Case styles in stock: 3″ and 4″ Designer and Centurion, 6″ Universal (described below).

For complete information, request Bulletin PM-3.



Centurion

Designer

Universal

Other Beede Panel Meters

Centurion Line. 3″ and 4″ durable molded black phenolic with glass window for front-of-panel mounting; 4″ back-of-panel model. Illumination available in 4″ models.

Designer Line. Clear picture-frame design with concave window in 2″, 3″, 4″, and 6″ widths for both front and back-of-panel mounting.

Universal Line. Large, highly visible meter cases in 6″ and 8″ widths for across-the-room reading.

250° Line. Beede's very popular 250° movement for switchboard, automotive, marine applications available as meter movement only (see bottom of next page) or in brass, chrome, or black lacquer case with glass front, 3″ and 6″ diameter.

Edgewise Line. 1½″ and 2½″ models for applications demanding minimum panel space.

QA Line. 1½″, 3½″, and 4½″ cases with concave window, lower portion painted or horizontal ribbed.

Traditional Line. Available in various rectangular and round phenolic cases.

Clear Front Line. 1″, 2″, 3″, 4″ cases for general-purpose panel-meter applications.

For complete information, request Bulletin PM-2.

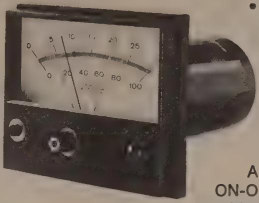
Control Meter-Relays

The Beede non-contacting control-meter relay combines a high-torque d'Arsonval meter with an adjustable photoelectric sensor, switching circuit, and output switch. As the monitored variable passes the adjustable setpoint, an output relay is either energized or de-energized. Either one or two setpoints are available.

Beede's greatly simplified meter-relay design has significantly reduced the number of parts, resulting in price savings up to 50% without a sacrifice of quality features.

Features

- Optical, non-contacting control, continuous indication.
- Standard models available from stock.
- Wide variety of options (power supply, input and output, tamperproof setpoint controls, etc.) for inexpensive customizing.
- Available as single complete unit, or with separate control, or optical element only.
- Inherently fail-safe.
- AC or DC power input.
- Direct-drive set pointers.
- Lamp life in excess of 10 years.
- Meter movement and/or dial custom-designed to your specifications if required.
- Meter permanently free of static influence.
- Attractive, modern "Centurion" case, 3" or 4" wide; 4" model available also for behind-panel mounting.



Specifications

Accuracy ±2% or ±1%.
ON-OFF operation or latching with manual reset.
Output: 5 amp (resistive load) DPDT relay for each setpoint. Solid State Output available.
Standard Deadband is 0.5% nominal.
Power Requirements 105 to 130 Volts AC.
Other AC and DC power inputs available.
Ambient Temperature 40°F to 165°F is standard.

Movements

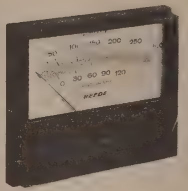
MAG-BAND TAUT BAND, 0-20μA DC minimum range.
MAG-B PIVOT AND JEWEL, 0-200μA DC minimum range.

For complete information, request Bulletin MR-2.

Pyrometers

NEW Optemp™ pyrometer/meter relay. High-impedance input amplifier delivers high-power signal to meter movement, eliminating need for thermocouple lead-length adjustments and permitting the use of lower-cost light-gage t/c extension wire. Rugged high-torque pivot-and-jewel movement with non-contacting optical switching for fast response, inherent noise rejection, continuous indication.

Standard Optemp models suitable for Types J and K t/c's. Six stocked ranges from 0-300°F to 0-2500°F. Single or double setpoint. Case width 3 or 4 in. All models have electrical cold-junction compensation, t/c break protection. Many options available, including integral bridge circuits enabling use of RTD or thermistor sensing of narrow temperature ranges.



Indicating pyrometers—As "prime source for temperature instrumentation," Beede offers, in addition to the controlling pyrometers described at left, a complete range of indicating panel-meter pyrometers in a wide choice of case styles in widths from 2" to 6". Clear-reading mirror scales eliminate parallax error, and may show both Fahrenheit and Centigrade units.

For complete information, request Bulletin T-1.

Meter Movements

Precision d'Arsonval movements as used in the case styles shown above, or available for installation in customer's case.

Shielded-Bar Taut-Band. Maximum sensitivity and freedom from hysteresis, for measuring extremely low microampere ranges.

Mag-Band Taut-Band. Self-shielded, high-torque, excellent balance, no drift.

Mag-B Pivot-and-Jewel. Rugged, high-torque self-shielded movement.

250°. A fine, sturdy, self-shielded 250° pivot-and-jewel movement, very popular for process-control applications. Available in a choice of mounting arrangements.

Super-Torque™ 250°. Vehicle, heavy machinery, process applications. Thru-shaft design takes push-on pointers, withstands casual handling by untrained personnel. World's ruggedest 250° movement.

AC Iron-Vane (Repulsion). The preferred movement for making direct measurements of AC voltage and current. Better than d'Arsonval movements for AC panel meters.

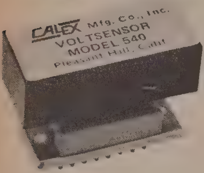
VOLTSENSORS — INSTRUMENTATION AMPS



CALEX Mfg. Co., Inc.
VOLTSENSOR
MODEL 540
Pleasant Hill, Calif

model 540
new!

Need to compare dc voltages? The Calex Model 540 VOLTSENSOR is your answer!

- Convenient DIP compatible package . . . can be plugged into any 16 pin DIP socket.
- Wide supply range . . . operate from
  - Single Supply of +5V to +32V or
  - Dual Supply of ±5V to ±16V
- Protected against accidental damage . . .
  - Input Protected to ±100V
  - Output Protected
- Good power-handling capability . . .
  - Output can sink up to 100mA
  - Output load can go to any voltage up to +32V
- Versatile Operation . . .
  - Hysteresis can be externally varied over wide range
  - Module can be connected for latching operation
  - Inputs can be reversed to change logic
  - Output can be connected to sink or source the load current
- Low Cost
  - $19 in 1-9 Quantity

Mounting kits with relays and adjustment pots are also available.

MODEL 425-250A
VOLTSENSOR

complete voltsensor systems

For process control systems and manufacturing test equipment, here's a complete VOLTSENSOR system in a single package—no external components needed, just connect to 115VAC for power. These modules contain a DC power supply, reference voltage, adjustable set-point, and the output is a DPDT relay. An LED indicator shows output status. The relay changes state as the DC input voltage varies around the set point. Because the unit has its own built-in power supply and the output is a set of relay contacts, you can apply floating inputs with voltages of up to 1500V above the AC line neutral. This isolation makes it feasible to connect ungrounded thermocouples directly to the amplifier inputs.

DIGITAL PANEL INSTRUMENTS

DIGITAL PANEL COUNTER — MODEL DPC-8100

Accepts and displays count rates up to 10 MHz. Gating is by either front panel pushbutton, external logic input or optional crystal timebase.

Front Panel: Six LED decimal digits. Stop, start, reset pushbutton, overrange, gate on, display latched and power fail LED indicators.

Price, including connectors:

All AC models (with non-latched BCD, no low level, no time base)	$299.00
Add for: latchable, gatable BCD	70.00
timebase	65.00
low level input	30.00

DIGITAL STOP CLOCK — MODEL DSC-8200

General purpose count-up timer with six digit LED display. Timebase is either AC line or internal crystal oscillator. Crystal accuracy (initial, at 0° to +50°C, and after one-year aging) — ±10 ppm for each variable.

Front panel controls and indicators: Start, stop and reset pushbuttons. Overrange and power fail LED indicators.

Price, including connectors:

AC models with non-latched BCD	$299.00
+5VDC models with non-latched BCD	269.00
AC models with latchable BCD	369.00
+5VDC models with latchable BCD	339.00

DIGITAL TIME CLOCK — MODEL DTC-8300

Time-of-day with six LED displays in 12 or 24 hour models. May use internal crystal or 50/60 Hz AC line timebase. Crystal accuracy same as Model DSC-8200.

Front panel controls: Set/run pushbutton, Hours set pushbutton, Minute set pushbutton, Push-to-advance digits.

Prices, including connectors:

AC models with non-latched BCD	$299.00
+5VDC models with non-latched BCD	269.00
AC models with latchable BCD	369.00
+5VDC models with latchable BCD	339.00

DIGITAL SET-POINT COMPARATORS — MODELS DDC-8400 AND DLC-8400

Full parallel BCD comparators with (2) six-digit and sign thumbwheel set-point selectors on front panel. Relampable 50,000 hour incandescent indicators lite in various limit modes. Optional relays are available on 2nd internal P.C. board.

Model DDC-8400 — Two separate single-limit comparators in one case. Each has three lights to indicate UNDER/AT LIMIT/OVER status of that input as compared to set-point limits selected. Logic outputs for each light.

Model DLC-8400 — Single BCD input with upper and lower selectable set-point limits. Unit is three-zone (5 lamp) comparator indicating UNDER/BETWEEN LIMITS/OVER or equal to either the HI or LO LIMIT set-point. Logic outputs for each light.

Optional Power Relays: (Control externally patched from lower P.C. board logic outputs.)

Four mechanical contact relays, each with SPDT (Form C) contacts rated at 230VAC, 2 Amps max. resistive.

Two opto-isolated solid state relays with zero angle firing, rated at either 115 or 230VAC (specify) at 2 Amps max. resistive or inductive (to handle lamp load surges). Each relay is normally off (Form A) but can be biased to normally on (Form B).

Prices, including connectors:

For Model DDC-8400 or DLC-8400 AC power models, less relays	$399.00
+5VDC power models, less relays	335.00
Add for: Mechanical Contact Relays (4)	75.00
Or: Solid State Relays (2) (Specify 115 or 230VAC)	120.00

SPECIFICATIONS COMMON TO ALL 8000 SERIES

1. **Construction:** Black anodized extruded aluminum case and front bezel.
2. **Case Size:** 5.562" W. x 2.125" H. x 5.467" D. (54 x 141 x 139 mm) (to rear connector).
3. **Mounting Method:** Panel mounting by U-strap through a cutout 2.825" x 5.562" (55.5 mm x 143 mm) with four screwholes.
4. **Power Supply:** Choice of 100, 115, or 230 VAC ±10%, 50 and 60 Hz or +5VDC ±5% (DC) at 2 Amps max. (Logic Noise 50mV max.) AC on spade terminals.
5. **Displays:** (All models except Comparator) Decimal digits are 0.6" High red LED 7-segment type.
6. **Input/Output Connections (excluding AC power connections):** One or two sets of dual 36 pin P.C. board connectors.
7. **Operating Temperature Range:** 0° to +50°C.
8. Full Parallel BCD TTL outputs at rear connector.

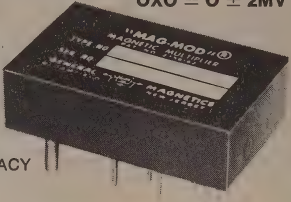
Magnetic Analog Multipliers...

Type # MCM 1351-2

DC X AC = AC Output

Product Accuracy ±½% Of All Theoretical Values Over The Full Military Temperature Range of —55°C To +125°C

OXO = O ± 2MV



OVER TEMPERATURE RANGE OF —55°C TO +125°C NO EXTERNAL TRIM POTENTIOMETERS REQUIRED TO OBTAIN SPECIFIED ACCURACY

FEATURES

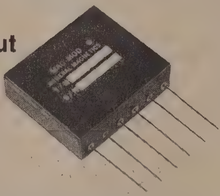
- Product accuracy is specified in % of reading for all output analog voltage product points over the full military temperature range instead of % of full scale error giving superior results for small values.
- Distortion free output AC wave over entire dynamic range regardless of temperature
- Linearity, product accuracy, and zero point virtually unaffected by temperature changes
- Magnetic circuit not sensitive to nuclear radiation
- Analog product accuracy, wave quality and phase stability allow dual multiplier assemblies to be matched in amplitude within 1% of point of each other and 0.1° phase error over the temperature range
- Package size, power supply voltages and electrical specifications may be altered at no extra cost.

SPECIFICATIONS

Transfer equation: E = XY/3
X & Y input signal ranges: 0 to ± 3V Peak
Maximum static and dynamic product error: ½% of point or 2 MVRMS, whichever is greater, over entire temperature range
Maximum zero point (X = 0, Y = 0): 2 MVRMS over entire temperature range
Input impedance: X = 10K; Y = 10K
Full scale output: 3 VRMS
Output impedance: Less than 50 ohms
X input band width: flat, DC to 200 hertz
Y input band width: flat, 20 hertz to 1000 hertz
Operating temperature range: —55°C to +125°C
Storage temperature range: —70°C to +125°C
Zero point drift over temperature range: ± 1MVRMS maximum
DC power: ± 15V unless otherwise required @ 20 ma
Overall dimensions: 1.8" x 1.1" x 0.5"
Weight: Approximately 1 oz.
Case material: High permeability Nickel Alloy
Terminals: Glass to metal hermetic seal pins

Type # MCM 1385-1

DC X AC = AC Output



Product Accuracy 1% Of All Readings Over The Entire Temperature Range.

Low Cost Multiplier

SPECIFICATIONS OVER TEMPERATURE RANGE —55°C to +125°C

Transfer equation: E = XY/10
X & Y input signal ranges: 0 to 10V Peak
Maximum static and dynamic product error: 1% of point or 2MVRMS, whichever is greater.
Maximum zero point (X = 0, Y = 0): 2 MVRMS over entire temperature range.
Input impedance: X = 10K; Y = 10K
Full scale output: 7VRMS
Minimum load resistance for full scale output: 2000 ohms
Output impedance: Less than 50 ohms
X input band width: flat, DC to 10,000 hertz
Y input band width: flat, 20 hertz to 50,000 hertz
Roll off rate: 6db per octave
Operating temperature range: —55°C to +125°C
Storage temperature range: —70°C to +125°C
Zero point drift over temperature range: ±2MVRMS maximum.
DC power: ±15V unless otherwise required at 10ma
Overall dimensions: 1.25" x 1.10" x .35"
Weight: 0.4 oz.
Case material: High permeability Nickel Alloy
Terminals: Glass to metal hermetic seal pins

NOTE: This is not a Hall effect device

Type # MCM 1478-1

New-Precision — ½% of All Output Points (DC to 1000Hz.)

Product Accuracy ±½% Of All Theoretical Output Values Over The Full Military Temperature Range Of —55°C to +125°C

Maximum Output Error for Either
X = O, Y = 10V
Y = O, X = 10V
X = O, Y = O
would be ±2 MV over Entire Temperature Range.

SPECIFICATIONS

Transfer equation: E = XY/10
X & Y input signal ranges: 0 to ±10V Peak
Maximum static and dynamic product error: ½% of point or 2 MVRMS, whichever is greater over temperature range
Maximum zero point (X = 0, Y = 0): 2 MVRMS over entire temperature range
Input impedance: X = 10K; Y = 10K
Full scale output: 10V Peak
Minimum load resistance for full scale output: 2000 ohms
Output impedance: Less than 50 ohms
X input band width: flat, DC to 200 hertz
Y input band width: flat, DC to 1000 hertz

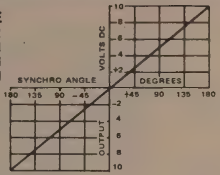
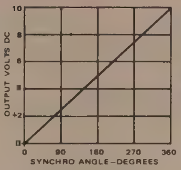
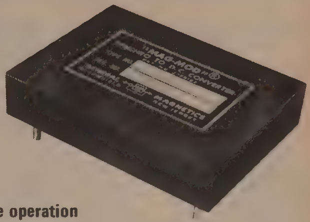
Solid State 3 Wire Synchro To Linear DC Converters...

RESPONSE CURVE
MAC 1422-1
MAC 1449-1
MAC 1458-1
MAC 1459-1



RESPONSE CURVE
MAC 1460-1
MAC 1461-1





FEATURES:

- Develops a DC output voltage linearly proportional to a synchro angle over a ± 180° range.
- Completely solid state with all of the inherent advantages over a mechanical system such as:
  - High reliability (since there are no moving parts)
  - Light weight—6 ozs.
  - Small size
  - All units hermetically sealed
- Wide temperature range operation
- Output short circuit protected
- Three wire inputs isolated from ground
- Package size may be altered at no extra cost
- Units can be altered to accept different line to line voltages or different operating frequencies at no extra cost
- Not affected by reference voltage or power supply variations.

Precision AC Line Regulators...

Type # MLR-1476-1/TOTAL REGULATION 0.1% MAXIMUM

FEATURES

- Distortion free output sine wave.
- Regulation control better than one order of magnitude superior to commercial AC Voltage Regulators transformer product lines.
- No active filter or tuned resonant circuits employed.
- Regulation virtually indifferent of frequency, line amplitude, temperature or load changes.
- 1 watt output level.
- Extremely small size.
- Isolation between input and output.

SPECIFICATIONS

AC input line voltage: 26vrms ±20% at 400 Hz. ±20%.
Output: 26vrms ±1% for set point range.
Load: 0 to 40 ma.
Total regulation: ±0.1% maximum (any combination line aplitude, frequency, load).
Distortion: Less than 0.5%
Temperature Range: −55°C to +125°C
Size: 2″ x 1.8″ x 0.5″
Output Phase Angle = 0° ±0.1° over entire temperature range and ±20% frequency variations.
Weight: 1 Oz.
Case material: High permeability Nickel Alloy
Terminals: Glass to metal hermetic seal pins

Type # MLR-1476-2

FEATURES

- 0.1% total line and load regulation
- Independent of ±20% frequency fluctuation
- 6.5 watt output
- Small size
- Input and output completely isolated
- Short circuit protected

SPECIFICATIONS

- AC line voltage: 115V ±20% @ 400Hz ±20%
- Line current at full load: 95ma
- Output: 26V ±1% for set point
- Load: 0 to 250 ma
- Total regulation for line, load and frequency changes: ±0.1%
- Distortion: 2%
- Temperature Range: −55°C to +85°C
- Size: 2″ x 4.5″ x 0.9″

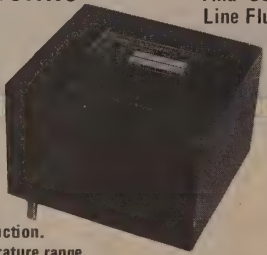
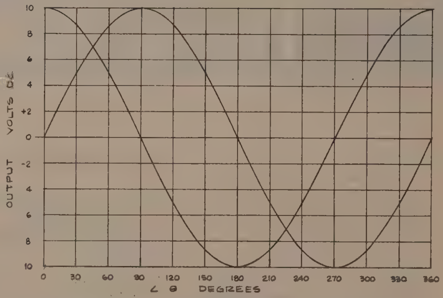
NON VARIANT SOLID-STATE SINE-COSINE SYNCHRO CONVERTER -

Type # DMD 1508-2



This New Encapsulated Circuit Converts A 3 Wire Synchro Input To A Pair Of DC Outputs Proportional To The Sine And Cosine Of The Synchro Angle Independent Of A-C Line Fluctuations



FEATURES:

- Complete solid state construction.
- Operates over a wide temperature range.
- Independent of reference line fluctuations
- Conversion accuracy—6 minutes.
- Reference and synchro inputs isolated from ground

SPECIFICATIONS

- Accuracy: Overall sin/cos conversion accuracy of 6 minutes. Absolute value of sine and cosine outputs accurate to 30 mv.
- Temperature Range: Operating −40°C to +85°C, Storage −55°C to +125°C
- Temperature Coefficient of Accuracy: ±10 seconds/°C on conversion accuracy, ±1 MV °/C on absolute output voltages.
- Synchro Input (Isolated from Ground) 90 V line to line ±5% @ 400 HZ ±5%.
- Synchro Input Impedance: 50 K minimum line to line
- Reference Input (Isolated from Ground): 115 V RMS ±5% @ 400 HZ ±5%
- Reference Impedance: 50 K minimum.
- Output Variation with Reference Changes: ±10 MV maximum for ±5% reference fluctuations.
- DC Power: ±15 VDC ±1% @ 60 MA
- Output: ±10 VDC full scale output on either channel @ 5 MA load (short circuit protected).
- Tracking Speed: Output within specified accuracy when the tracking speed is 20 RPM

There is No Substitute for Reliability

Solid State Magnetic Demodulators...

FEATURES

- High reference impedance resulting in very small reference power requirements
- Output as high as ±10 v. DC in present units
- Unit operation frequencies: 60 Hz to 100 KHz
- Very low DC offset null voltages (as low as 0.1% of full scale)
- Operation over wide environmental conditions
- Completely solid state—no moving parts
- Signal and reference terminals may be isolated
- Low output impedance
- Small physical size

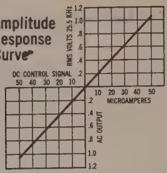
'Mag Mod' Micro-miniature Magnetic Modulators...

...Design Analog Computers with Micro Magnetics

Withstands High Intensity Nuclear Radiation

Amplitude Response Curve



Typical Performance Data — Model 748-3

Output distortion as low as 1%

Electrical zero point and gain, repeatability and stability over the entire service life

Extremely broad bandwidth

Carrier frequencies as high as 5 MHz

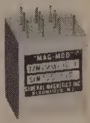
Input signal current resolution better than 0.001 μa

Low milliwatt power consumption

Circuit Isolation—DC to AC Sinusoidal Conversion and Amplification

"MAG MODS" PROVIDE FOUR QUADRANT OPERATION, extreme stability with negligible change of phase, gain and zero position over a wide temperature range. Design is simple, featherweight and rugged—with no vacuum tubes, semiconductors or moving parts to limit life.

MICRO MAGNETIC MODULATORS FEATURE an essentially drift-free circuit with superior phase and gain stability over wide environmental ranges. All the ruggedness, dependability, wide dynamic range and stability that are characteristic of the larger magnetic modulators are engineered into this new magnetic circuit. MICRO "MAG MODS" are shock and vibration proof, provide infinite standby and service life. The micro modulators below are typical; for specifications on other models request literature.



TYPE NUMBER	IMM 987-1	IMM 821-1	IMM 847-1	IMM 1112-1

"MAG MODS" conform to MIL-T-27A and MIL-E-5400 Specifications

Prime Components in Solid State Design—The "MAG MOD" family of Magnetic Modulators has proven to be the most reliable module circuit block in aircraft and space vehicle flight control systems developed to date. They are universally accepted and in use in many military and commercial products where reliability is a price factor. Request literature.

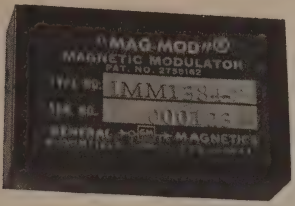
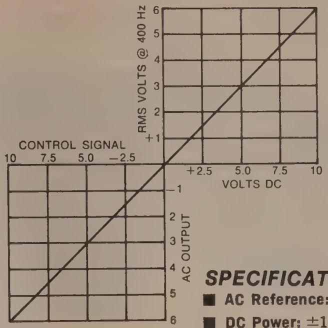
Precision Magnetic Modulator...

Phase, Gain, Zero Point, Null Insensitive to Variations in AC Line, DC Power, Line Frequency, Ambient Temperature

TYPE IMM 1384-2





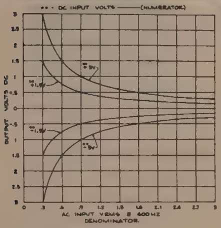
FEATURES:

- Four Quadrant Operation — over 80DB dynamic range per quadrant
- Distortion free output AC wave over entire dynamic range regardless of temperature
- Linearity, and zero point virtually unaffected by temperature changes
- Magnetic circuit not sensitive to nuclear radiation
- All units are hermetically sealed and completely shielded from external electric or magnetic fields
- Gain, linearity, wave quality, and phase stability allow dual modulator assemblies to be matched in amplitude within 1% of point of each other and 0.1° phase error over the temperature range
- Dynamic specifications unaffected by years of continuous operation and storage
- Package size, power supply voltages and electrical specifications may be altered at no extra cost
- Output gain response curve completely independent of AC line variation

SPECIFICATIONS:

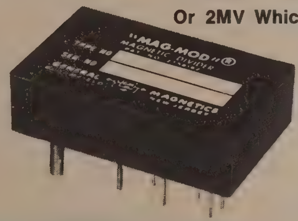
- **AC Reference:** 26 VRMS 400 Hz
- **DC Power:** ±15V at 10 ma
- **Linearity:** 0.1% f.s. or 1 MVRMS whichever is greater
- **Null:** 5 MVRMS maximum
- **Output Range:** 0 to 6 VRMS
- **Load:** 2K ohms minimum
- **Wave Quality:** 0.5% maximum distortion
- **Output Phase Angle:** Zero ° ±0.1° (380-420 Hz)
- **Overall Dimensions:** 1.5 x 1.1 x 0.5 inches
- **Output Isolated**
- **Temperature Range:** —55°C to +100°C
- **Weight:** 1.25 Oz.
- **Case Material:** High permeability nickel alloy
- **Terminals:** Glass to metal hermetic seal pins

Magnetic Analog Divider...



Type # MDM 1355-4 DC ÷ AC = DC Output

Division Accuracy ±1% Of All Theoretical Values Of Quotient Or 2MV Whichever Is Greater, Over A 100:1 Denominator Range



FEATURES

- Linearity, division accuracy and zero point virtually unaffected by temperature changes
- Magnetic circuit not sensitive to nuclear radiation
- Package size, power supply voltages and specifications may be altered at no extra cost
- Accuracy specified in terms of absolute (theoretical point) not full scale
- Wide denominator ranges can be accommodated
- No external trim potentiometers required to obtain specified accuracy.

SPECIFICATIONS

Transfer equation: $E_o = \frac{0.3X}{Y}$

Division accuracy: 1% of all theoretical quotient points or ± 2MV whichever is greater over the temperature range

Input impedance: X = 90K; Y = 50K

Full scale output: 3V DC

X & Y input ranges: X = 0 to ± 3V DC
Y = 0.3V RMS to 3.0V RMS
400 Hz ± 10%

Output impedance: Less than 10 ohms

Bandwidth: 10 Hz at Y = 0.3V RMS

Operating temperature range: —55°C to +125°C

Storage temperature range: —70°C to +125°C

DC power: ± 15V @ 30 ma

AC reference: 6V RMS 400 Hz ± 10%

Overall dimensions: 2.2" x 1.3" x 0.5"

Weight: Approximately 1 oz.

Case material: High permeability Nickel Alloy

Terminals: Glass to metal hermetic seal pins

There is No Substitute for Reliability

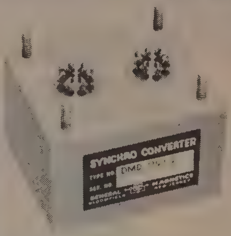
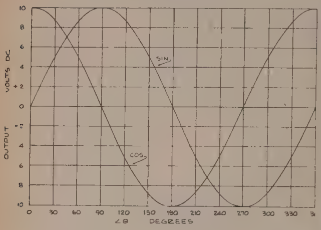
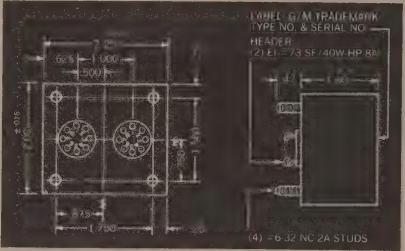
Solid State Sine-Cosine Synchro Converter...

This new encapsulated circuit converts a 3-wire synchro input to a pair of d-c outputs proportional to the sine and cosine of the synchro angle.

- Complete solid state construction.
- Occupies a volume of only 3.2 cu. in. (Single Channel)
- Operates over a wide temperature range.







Typical Specifications
Type DMD 1193-4
Dual Channel Synchro Converter

ACCURACY – Overall conversion accuracy 6 minutes.
AMBIENT TEMPERATURE:
RANGE – Operating –40°C to +100°C
Storage –62°C to –125°C
APPLICATIONS – Analog computers
Flight systems
Fire control
Guided missiles

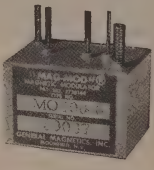
DUAL CHANNEL SYNCHRO CONVERTER General Magnetics Model DMD 1193-4 provides two (2) completely independent sine-cosine synchro converter circuits in one package. Overall conversion accuracy is six (6) minutes. Temperature range is —40°C to +100°C.

This new General Magnetics circuit converts a 3 wire synchro input to a pair of d-c outputs proportional to the sine and cosine of the synchro angle. The circuit features complete solid state construction, occupies a volume of only 3.2 cubic inches and operates over a wide temperature range. Overall conversion accuracy defined by the tangent of the angle whose sine and cosine are generated is six (6) minutes. Models are available with both single and dual channel outputs.

Miniature High Stability Sinusoidal Oscillators

G/M Miniature
High Stability
Sinusoidal Oscillator
GMO Series



These high reliability GMO Series Sinusoidal Oscillators provide better than 1% frequency stability at 400 cps over a temperature range of from –55°C. to +95°C. Oscillators of the same series, for operation at any audio frequency from 400 cps up, at temperatures up to +125°C. can be designed to customer specifications. Offering extremely compact design, GMO Series Oscillators are ruggedly constructed to withstand very high shock and vibration.

FEATURES—

- **High frequency stability with load variation**
- **Extremely long time-period stability**
- **Excellent frequency stability over wide temperature ranges**
- **Low power requirements**
- **Excellent wave form— distortion less than 1%**
- **Can be employed with all printed circuits**
- **Light weight (less than 1 oz.)**
- **Volume less than 1 cubic inch**

SENSITIVITY – Frequency is not significantly affected to ±10% changes in D.C. supply voltage.

PROVIDING THE ULTIMATE IN SOLID STATE DESIGN—General Magnetics Miniaturized High Stability Oscillators offer extremely high shock and vibration resistance. Stability of performance and ruggedized construction make these solid state components the ideal solution for today's applications in increasingly broad operating environments.

GMO SERIES OSCILLATOR 400-6

TEMPERATURE RANGE	**–55°C. to +95°C.**
OUTPUT	**7.0 V. RMS ±5%**
FREQUENCY	**400 cps ±1%**
DISTORTION	**1% (MAX.)**
SUPPLY VOLTAGE	**±15 V.D.C.**

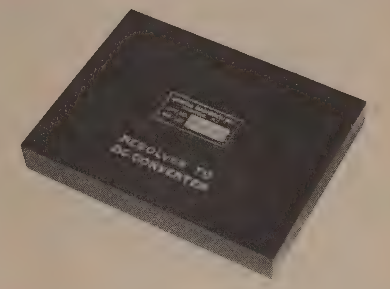
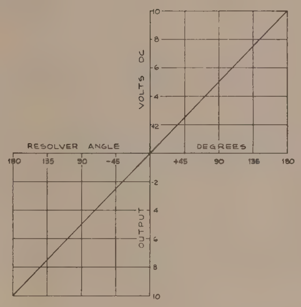
Solid State 4 Wire Resolver To Linear DC Converters...

Type # MACR 1492 (11.8V L-L) Type # MACR 1493 (90V L-L)

FEATURES

- Develops a DC output voltage linearly proportional to a resolver angle over a ± 180° range
- Completely solid state with all of the inherent advantages over a mechanical system such as:
    - High reliability
    - Light weight — 6 ozs.
    - Small size
- All units come in hermetically sealed metal cans
- Four wire inputs isolated from ground and from each other
- Wide temperature range operation (MACR 1492-1 & MACR 1493-1)
- Economical room temperature units available (MACR 1492-2 & MACR 1493-2)
- Package size may be altered at no extra cost
- Output short circuit protected
- Units can be altered to accept different line to line voltages or different operating frequencies
- Not affected by reference voltage or power supply variations





Specifications

Transfer equation: ± 1V/± 18°

Accuracy: 1492-1 } ± 0.5% @ 25°C ± 20°C
1493-1 } ± 1% @ − 25°C to + 85°C
1492-2 } ± 0.5% @ 25°C ± 20°C
1493-2 }

Input voltage: 1492 — 11.8V, 400HZ 4 wire resolver input; 26V, 400HZ reference
1493 — 90V, 400HZ 4 wire resolver input; 115V, 400HZ reference

Operating frequency: 400HZ ± 20%

Input impedance: 10K min.

Full scale output: ± 10V DC (± 180°)

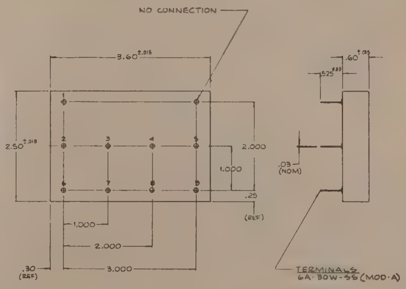
Minimum load resistance for full scale output: 2K

Output impedance: < 1 Ω

Storage temperature range: − 55°C to + 100°C

DC power: ± 15V ± 1% @ 75ma (approximate)

Case material: High permeability nickel alloy



There is No Substitute for Reliability

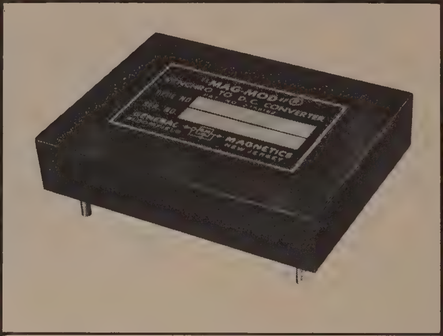
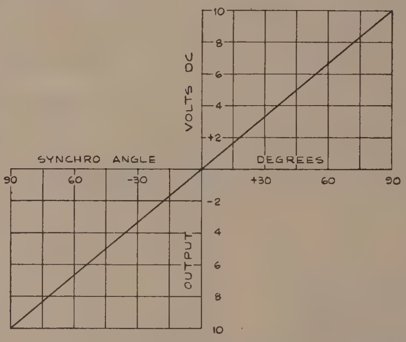
Solid State 3 Wire Synchro To Linear DC Converters...

COST SAVING UNITS WITH A CONVERSION RANGE OF 90° FOR APPLICATIONS THAT DO NOT REQUIRE FULL 180° OPERATION

Type # MAC 1487 (11.8V L-L) Type # MAC 1494 (90V L-L)





FEATURES

- Develops a DC output voltage linearly proportional to a synchro angle over a ± 90° range
- Completely solid state with all the inherent advantages over a mechanical system such as:
    - High reliability
    - Light weight
    - Small size
- All units come in hermetically sealed metal cans
- Three wire inputs isolated from ground
- Wide temperature range operation (MAC 1487-3; MAC 1494-1)
- Even more cost savings on room temperature units (MAC 1487-4; MAC 1494-2)
- Package size may be altered at no extra cost
- Output short circuit protected
- Units can be altered to meet your exact voltage and operating frequency requirements — in most cases at no extra cost
- Not affected by reference voltage or power supply variations

Specifications

Transfer equation: ± 1V/± 9°
Accuracy: 1487-3 } ± 0.5% @ + 25°C ± 20°C
1494-1 } ± 1% @ − 25°C to + 85°C
1487-4 } ± 0.5% @ + 25°C ± 20°C
1494-2 }
Input voltage: 1487 — 11.8V, 400HZ 3 wire synchro input; 26V, 400HZ reference
1494 — 90V, 400HZ 3 wire synchro input; 115V, 400 HZ reference
Operating frequency: 400HZ ± 20%
Input impedance: 10K minimum line to line
Full scale output: ± 10V DC (± 90°)
Minimum load resistance for full scale output: 2K
Output impedance: < 1Ω
Storage temperature range: − 55°C to + 100°C
DC power: ± 15V ± 1% @ 75ma (approx.)
Case material: High permeability nickel alloy

Four Quandrant Sine Function Generator...

GENERAL MAGNETICS, INC.
TYPE NO.
S/N NO.

Model # G1489-1

FEATURES

- Provides a sine function with ½% accuracy over a − 180° to + 180° range
- Excellent temperature stability
- Full scale output of ± 10V DC
- Scale factor adjusted by a DC signal
- Hermetically sealed package

Specifications

DC accuracy: ± 30 min of ARC or 0.5% whichever is greater

DC accuracy over operating temperature range: ± 30 min of ARC or 0.75% whichever is greater

Transfer equation: $E_o = -E \sin \theta$
E represents an external DC voltage in the range of + 2V to + 10V

Input resistance: θ input (pin 6) — 100K ± 10%

Input resistance: E input (pin 4) — 47K ± 10%

Rated output voltage: ± 10V max at 5ma

Output impedance: < 1 Ω

Frequency response:* 400HZ

Power requirements: ± 15V DC ± 1% at ± 40ma

Operating temperature range:

MSFG 1489-1	− 40°C to + 100°C
MSFG 1489-2	− 25°C to + 85°C
MSFG 1489-3	0°C to + 70°C
MSFG 1489-4	25°C ± 10°C

*Frequency response is specified for a ± 5V triangular input waveform

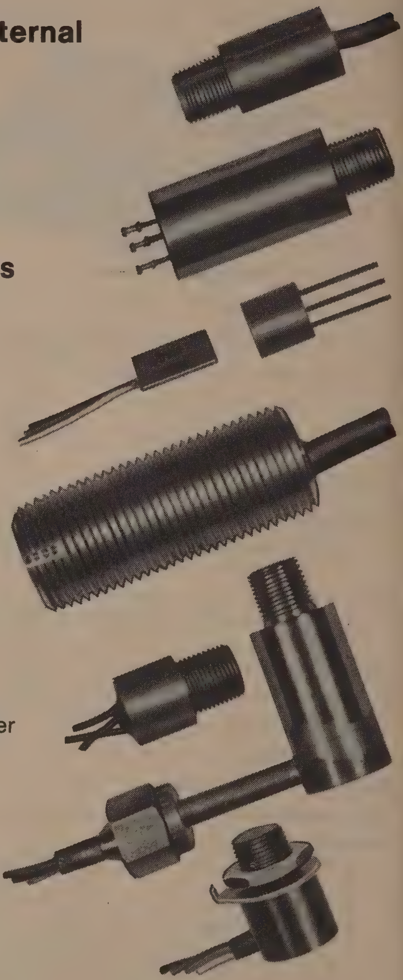
135 Bloomfield Ave., Bloomfield, New Jersey 07003 - Tel. (201) 743-2700

Speed-Independent Magnetic Pick-ups

Their output voltage amplitudes are totally independent of the rate of change to the external magnetic field. They provide

- True zero speed sensing
- Contactless limit switches
- Translational and rotational velocity, direction and position sensing
- Counting, indexing, and timing functions



Benefits:

- Simplify designs
- Low power consumption
- Rugged enough for engine environments
- Aerospace reliability
- Operate from logic power bus
- Freedom from EMI (no choppers or oscillators)
- Freedom from actuator mechanisms
- Can replace optical systems

Applications:

Computer peripherals—sensing of indexing marks for drive mechanisms in card readers / magnetic tape memories / paper roll drive, and character selection in printers

Transportation—wheel speed sensing (skid-controlled braking) / ignition system timing / vehicle sensing (traffic control)

Industrial — speed, position and limit sensing

Aerospace — wide applications

Other Products:

Solid state Push Button and Toggle Switches / Solid state current sensors / Hall Effect Devices / Magnetoresistors / Fluxmeters / Gaussmeters.

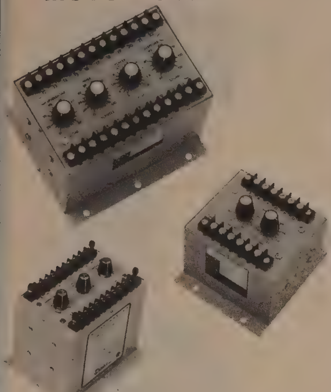
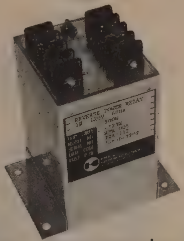
INDUSTRIAL CONTROLS

ELECTRONIC MOTOR CONTROLS



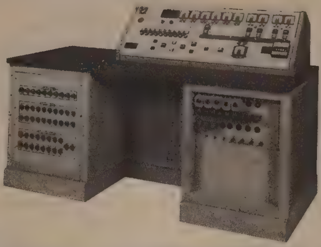
The protection and control of motor-driven equipment is accomplished through true power sensing for maximum effectiveness. Timing and sequencing functions are incorporated as required by the application. Uses include: submergible oil pumps, cryogenic pumps, agitating and settling systems, conveyor systems, refrigeration systems, machine tools, and injection molding equipment.

REVERSE POWER RELAYS



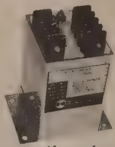
Where two or more generators supply energy to a common bus, reverse power relays provide a means for determining when one of them has stopped producing power and started to consume it. When this occurs, the output of the reverse power relay is used to disconnect the faulty unit from the bus before it can severely overload the units that are still functioning. Rated at 500 watts per phase, there is a model for each type of AC distribution system. With an adjustable time delay and 1500 Vac isolation, input/output/case, these solid state units provide reliable protection.

CONTROL SYSTEMS



KRATOS Process Control Systems satisfy a broad variety of requirements ranging from simple units providing sensing, timing, and sequencing functions to fully computerized control. Applications include: batching of chemicals, concrete, asphalt, rubber, feeds, and explosives; automatic truck loading; food processing; and material handling operations.

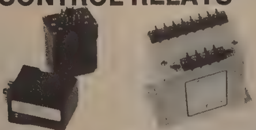
ALARM RELAYS



Alarm relays are protective devices used with any standard transducer output for monitoring AC voltage, current, power, frequency, power factor or such parameters as temperature, pressure, speed, etc. No transducer is needed for inputs of DC current or voltage.

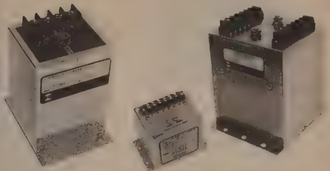
Single and dual limit versions with nine convenient input ranges provide limit detection for a broad spectrum of applications. Repeatability is 0.5% including hysteresis. Programming from 0-120% of full scale may be provided at the unit or remote. Complete input/out/power isolation eliminates grounding problems. All solid state construction is used for stability, reliability, and ruggedness.

CONTROL RELAYS



These units are more complex than the simple Alarm Relays in that they incorporate any required signal conditioning and are integral to a control loop. They are available in single and multiple limit versions.

TRANSDUCERS & TRANSMITTERS



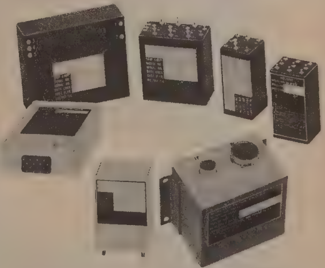
Complete line of power transducers for utility or industrial applications. AC volts, AC amps, Watts, Vars, or Hz inputs produce constant current outputs. No drift. Long term stability. Expanded temperature range. Standard transmitter outputs: 1-5, 4-20, 10-50 ma DC.

POWER MONITORS

This family of protective devices monitors and controls incoming power to any unit, system or equipment for purposes of safe and proper operation.

The Monitors protect equipment or units from low or high voltage, current, or frequency conditions — or monitor proper phase sequencing or loss of phases.

LIMIT DETECTORS/SENSORS
(Special Environment Devices)



These devices, similar in function to the Alarm, Control Relays, and Power Monitors previously described, are units designed and packaged specifically for use in extreme environment operation such as in Aviation, Military or rugged Industrial applications.

Hermetic sealing, special packaging, capability of operation through wide temperature extremes, and higher accuracies are features of this line of control devices. Full MIL Spec designs are available as well as designs to meet rugged Industrial requirements such as explosion-proofing.

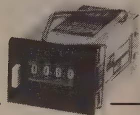
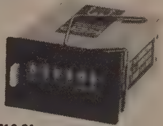
ADDING-TOTALIZING COUNTERS

These high performance totalizing counters are designed for long life - 250 million counts - and accuracy even at speeds up to 50 counts/sec. They can be supplied for any voltage in 5 mounting styles with many options.

M13.21
3 digit push button
4 digit w/o reset
Electric reset now available.
4 mounting styles available.



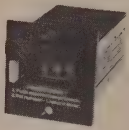
E14.21
4 digit with push button reset
Electrical reset optional



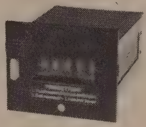
E16.21
5 or 6 digit with PB Reset
Electrical reset optional
5 or 6 digit with no reset

E17.10
7 or 8 digit w/o reset

PREDETERMING COUNTERS

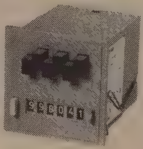


EVS13.11

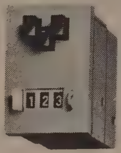


EVS15.13

These two predetermining counters count down from the manually preset number to operate a built-in SPDT switch as the number wheels pass from all zeros to all 9's. Manual or optional electrical or automatic reset returns wheels to preset number and counter is ready to start again. Numbers are preset by holding in reset button, lifting locking bar and indexing up number wheels to preset position with small rod supplied or by built in pushbuttons.



MVS16.21
New 6 digit predetermining subtracting counter features large staggered buttons for easy preset . . . manual and electrical reset . . . plug-in socket box mount allows easy mating with M16 counter.



MVS13.21
New 3 digit predetermining counter. Identical functionally to 6 digit unit on left, but is narrower to take up less panel space. All mounting options available, also manual and electrical reset. Any voltage, AC or DC at speeds up to 50 counts per second.

HOW TO ORDER

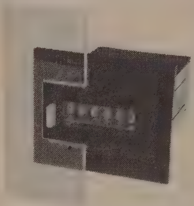
The basic catalog number i.e. M13, E14 through E18 plus EVS13, 15 and 25 followed by:

1st NUMBER E16.31
- 0- Small faceplate rear mounting
- 1- Large faceplate panel mounting with 2 screws
- 2&3 Flanged faceplate spring clip (See M13.21) or snap in (See E14.31).
- 5- Mount with no screws showing Behind the panel mounting

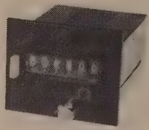
2nd NUMBER E16.31
- 0- No Reset at all (See E17.10)
- 1- Manual Reset Push Button
- 2- Electrical reset only
- 3. Manual & Electrical reset

FOLLOWED BY:
Count Speed Required: 10, 25, 40, 50, 75 per second & Voltage Required.

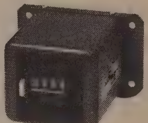
Some Optional Features



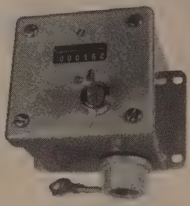
Behind panel mounting available on E16 or EVS15.



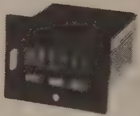
Spade key reset to prevent against unauthorized reset.



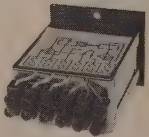
E14.61 Surface Mounting Option



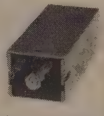
Nema 4 Water-tight & weather proof. Nema 7 explosion proof also available.



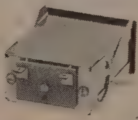
Special number wheels read out in time, money and reverse colors.



Standard insulated screw terminals on all E series counters.



Quick Disconnect terminals or solder terminals are standard on the M13 option on E series.



.187 x .20 quick connect terminals may be supplied. For other type terminals contact the factory.

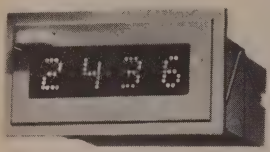
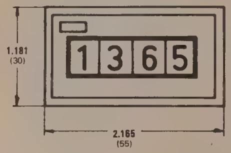
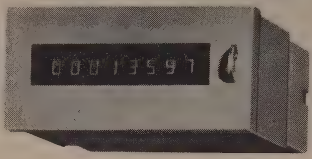
The All New "L" Series Totalizer . . . large display, great flexibility, small size, smallest price*

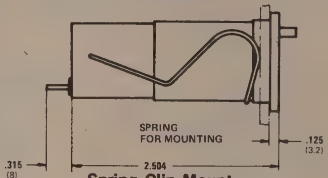


L104.23

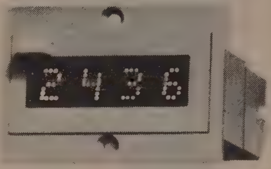




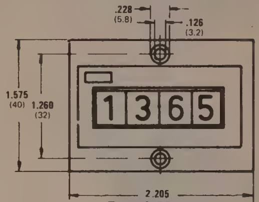
L108.00



Spring Clip Mount



L104.11



Panel Mount

**12 VDC, $40 O.E.M. quantity*

These new compact electronic counters utilize the latest c/MOS circuits to eliminate sensitivity to line transcients, reduce power requirements, and insure long life reliability. Built on 25 x 50 mm internationally recognized frame size for electro-mechanical counters they are interchangeable mounting wise with our new M Series counters. Large bright .160 or .300 inch high LED display, with optional decimal point insures good readability. Counters come in 4, 5, 6, 7, or 8 digit models. 60 counts per second maximum. For faster speeds and adding and subtracting capability, see the K and SC series.

MOUNTING

Two types of mounting are illustrated above. Type 104.23 panel mount uses a spring wire to hold the counter in the panel. No other hardware is required. A very neat, clean appearance results.

Type 104.13 panel mount uses two 4-40 screws for mounting.

ELECTRONIC PREDETERMINING COUNTERS

EL-4

The EL and SCP series are designed for batch counting and timing in industrial environments where constant resetting, high speeds and reliability are required. The SCP series offers a 10 amp 2 PDT relay output or a 9 amp triac output while the EL offers triac output only. Both have adjustable output times and are programable for many special applications. Both have built-in 110 VAC power supplies and are engineered to operate smoothly and the most rugged industrial environments. Both may be equipped with a built-in time base for pre-determining units of time before functioning. EL unit measures 2.56 x 2.95 x 3.94 deep. SCP Series measures 1.65 x 5.28 x 6.50 deep.

Guide to Sodeco impulse counters

★ The Sodeco R-Series: Up to 200,000,000 counts and speeds to 60 ips

Inside their rugged, clear packages, Sodeco's new R-series impulse counters pack many times the life of any other counter on the market. The most advanced counters you can buy, they're Swiss-engineered for greater precision, quieter operation, no missed counts. Instead of all the usual rattles, vibration and wear associated with standard ratchet mechanisms, our special escapement mechanism keeps them working better longer. Compact plug-in modules with power consumption as low as 0.8W are compatible with the most advanced solid state instruments and systems. Standard ± 15% voltage tolerances and a capacity for operating with a wide variance of pulse waveforms provide a maximum safety margin. For more details on R-Series counters check the asterisked items in the application categories below.

The Sodeco electronic predetermining counter type KE

Totally modern in MOS/LSI technology, fully flexible in use—the Sodeco KE counts up and down at speeds up to 1 MHz. 5-digit LED-type display has characters 7.5 mm (.30 in.) high, display can be frozen without disturbing incoming count. Features include TTL-compatible inputs and outputs, battery-backup capability in case of power failure. Also has double pre-determining feature. Fast-mounting case meets DIN standards, has 72 x 72 mm (2.83 in. x 2.83 in.) front panel dimension. Power is 5VDC ± 5%. The input voltage is adjustable from 5 to 48VDC.

For more information and technical data, contact: SODECO, a Division of Landis & Gyr, 4 Westchester Plaza, Elmsford, N.Y. 10523; phone (914) 592-4400.

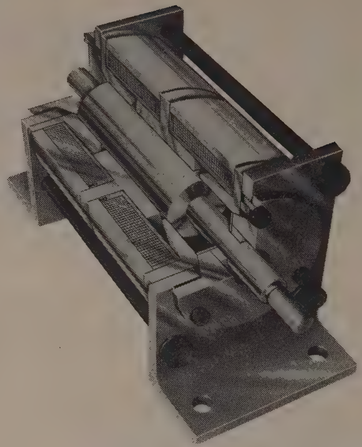
ELECTRO PROPORTIONAL SOLENOIDS AND CONTROL SYSTEMS



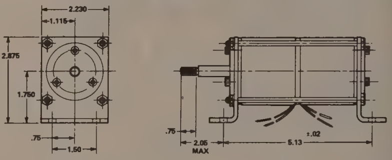
FOR PRECISE POSITIONING

New . . . Ledex linear electro proportional solenoid that can move loads over a ½ inch range and produce up to fifty pounds force at continuous duty. The Ledex E.P. solenoid is designed for rugged use, yet its low profile and compact size combine accuracy, high force, and fast response for the most precise applications.

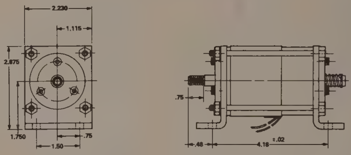
DESIGN BENEFITS

1. Only one moving part, the armature, typically provides 10,000,000 trouble-free cycles.
2. Maintenance free, no periodic lubrication necessary.
3. The only wear points are two bearings mounted in the bearing housings. Bearing assembly is easily replaced with an Allen wrench. No need to disturb the alignment of the unit.
4. Threaded shaft for load attachment allows secure and precise mechanical positioning.
5. Distinctive quality appearance and excellent environmental protection is provided by the electroless nickel plated case and anodized mounting brackets.
6. Designed to operate in temperatures from −40°C to +80°C.

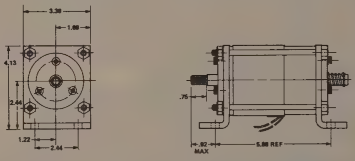
LB-22



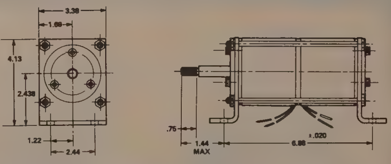
LU-22



LU-33



LB-33



18 STANDARD MODELS

The E.P. solenoids are available in both unidirectional (single coil) or bidirectional (dual coil) models. Both provide precise positioning and load control. Bidirectional units utilize electromechanical forces in both directions to accomplish this. Unidirectional units utilize electromechanical force from a single coil working against a balanced return spring or opposing load.

MODELS LU-22 AND LU-33

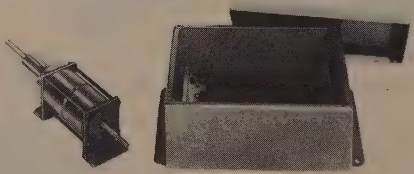
COMPLETE CONTROLLER PACKAGES FOR SYSTEMS

Standard closed loop controllers are in stock for use with both unidirectional and bidirectional electro proportional solenoids. Ledex controllers are easily modified through compensation networks to accommodate various types of load and performance requirements. These controllers are all factory pre-tested and calibrated for optimum system performance. Standard controllers operate on 22 to 38 Volts D.C. Standard oil tight JIC enclosures for harsh environments are available.



LEDEX INC.

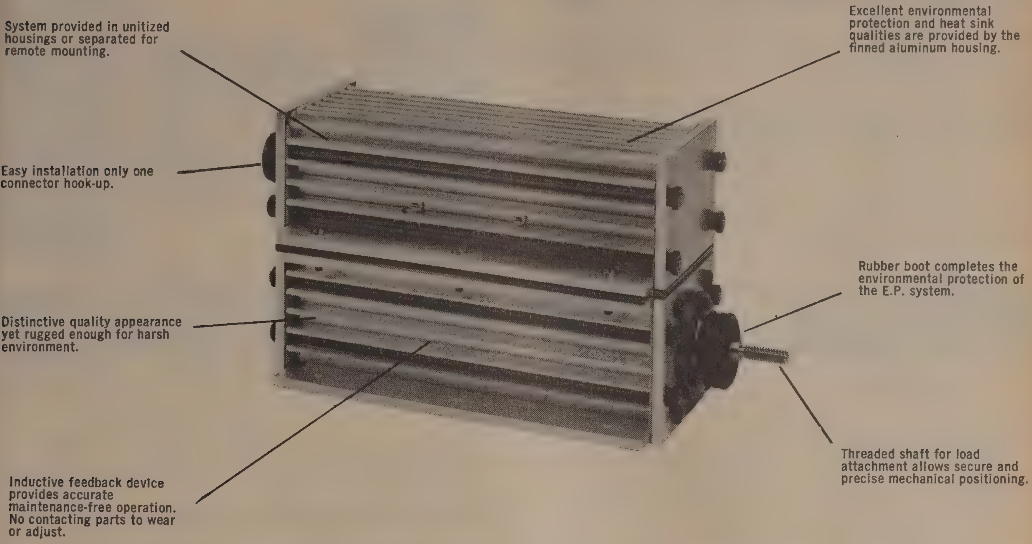
PHONE: (513) 224-9891

LEDEX

EP-505 PROPORTIONAL POSITIONING WITH 5% SYSTEM ACCURACY



System provided in unitized housings or separated for remote mounting.
Excellent environmental protection and heat sink qualities are provided by the finned aluminum housing.
Easy installation only one connector hook-up.
Rubber boot completes the environmental protection of the E.P. system.
Distinctive quality appearance yet rugged enough for harsh environment.
Threaded shaft for load attachment allows secure and precise mechanical positioning.
Inductive feedback device provides accurate maintenance-free operation. No contacting parts to wear or adjust.

CLOSED LOOP SYSTEMS IN ENVIRONMENTALLY PROTECTED HOUSINGS

Complete closed loop systems, using inductive feedback devices, provide five percent positioning accuracy. Since this type of feedback relies on an inductive field without contacting parts, it is maintenance free for the life of the system.

The controller, using pulse width modulated (PWM) techniques for high efficiency, provides error signals which drive to EPS.

The E.P. Solenoid, feedback electronics and controller are mounted in a finned aluminum enclosure for use in harsh environments. If desired, the controller can be provided in a separate housing for remote mounting.

The stock five percent system is designed for either 12 or 28 VDC operation. The Ledex E.P. systems provide closed loop servo performance, but at a fraction of the cost of a comparable servo system.

5% SYSTEM SPECIFICATIONS

(Unit design stroke .5 inches)

	Uni Directional	Bi Directional
Net Output Force @ Cont. Duty	2½ lbs.	5 lbs.
Positioning Accuracy (With load change from 0 to Cont. Duty Force)	±.025″	±.025″
Linearity as % of Full Stroke (No Load)	±5%	±5%
System Sensitivity (No Load)	4V/inch	4V/inch
Steady State Response at −6 DB (System compensated for No Load)	2Hz Min.	5Hz Min.
Transient Response (Typical)	200 ms	150 ms

Test Conditions:

Power Supply V_{cc} = 26 VDC
Temperature T_A = 25°C

NOTE: 1. Standard systems are supplied with electrical feedback compensation for force only load. Ledex can supply systems compensated for mass and/or friction loads.

System Electrical Input Requirements

Input Supply Voltage: 11 to 13 VDC @ 8 Amps Cont. 16 Amp Peak
25 to 29 VDC @ 4 Amps Cont. 8 Amp Peak
Input Command: 3 to 5 VDC (.5″ stroke unit) or 4V/inch
Input Impedance: 10K Minimum

PROCESS CONTROL MODULES

ELECTRONIC INTEGRATORS

Compute time-integral of sensor outputs; output pulses drive external or self-contained 24 V electro-mechanical totalizing counters (8 W max.). Full-scale output pulse rate field-settable with high resolution between 100 and 50,000 counts/hour.

Model No.	Input	Output
IV-100-X*	Process control currents	No count for less than min. current
IV-110	0 to 10 V	No count for -V
IV-200	−10 V to +10 V	Dual outputs for up-down counter
IV-201	−10 V to +10 V	Count ignores input polarity
IV-300	−10 V to +10 V	Integral counter display

* -1 = 1-5 mA, -2 = 4-20 mA, -3 = 10-50 mA.

ALARMS / SWITCHES

Trip when input parameters (frequency, speed, dc voltage, dc current) cross preset limits. Provide both electrical signal and Form C relay contact closure for alarm and on-off control applications.

- Gold-alloy relay contacts for switching dry circuit to 1A loads.
- No relay chatter.
- Fail-safe for power and signal interruption.
- Adjustable hysteresis.

FREQUENCY/SPEED MODELS SERIES FM-10

Accept arbitrary waveform frequency information from speed transducers, generators, etc., 0.1 to 200 V peak input level; 0.1 MΩ input impedance; respond in two cycles of input frequency. Full-scale trip frequency field-settable with high resolution between 40 and 10,000 Hz.

Model No.	No. of Preset Limit Frequencies	Trip Indication When Input Frequency Is
FM-10	1	Below limit
FM-11	1	Above limit
FM-12	2	Outside range between limits
FM-13	2	Below low and above high limit

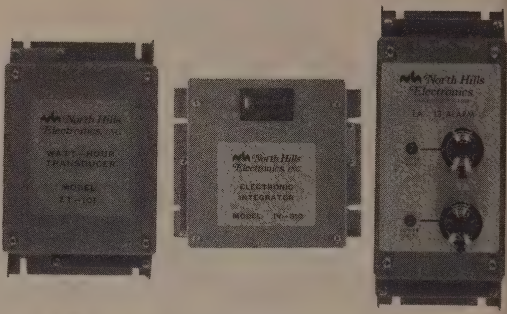
VOLTAGE/CURRENT MODELS LA-10

Accept mV, V, process control current inputs. Trip level set by Kelvin-Varley divider in steps of 10% and 0 to 10% continuous vernier. Alarm status indicated by LED monitor light. Single-ended or differential input. Instrumentation-type high stability input amplifier for very high input impedance and common mode rejection.

Model No.	Set Points	Alarm Indication When Input Level Is
LA-11	1	Above limit
LA-12	1	Below limit
LA-13	2	Below low and above high limit

Standard full-scales: mV = 50, 100, 500
V = 1, 5, 10
mA = 5, 10, 20, 50

North Hills



ISOLATED TRANSMITTERS

Convert various input parameters to process control current outputs. Input, output, power source are dc-isolated from one another.

- Outputs 1-5, 4-20, 10-50 mA at 0 to 30 V load voltage.
- 0.1% accuracy.
- Fast response.
- Wide range offset and span adjustments with high resolution.

VOLTAGE/CURRENT MODELS VX-10

Accept mV, V, process control currents.

Model designation: VX-10-X-Y, where

X = Input code:
1 = 1-5 mA, 2 = 4-20 mA, 3 = 10-50 mA
050 = 50 mV, 110 = 100 mV, 150 = 500 mA
210 = 1 V, 250 = 5 V, 310 = 10 V

Y = Output code:
1 = 1-5 mA, 2 = 4-20 mA, 3 = 10-50 mA

WATT-HOUR TRANSDUCER

MODEL ET-101

The ET-101 Watt-Hour Transducer produces an output pulse for a given watt-hour energy input sample. When accumulated in a suitable external counter, the total count is proportional to the total watt-hour energy use.

INPUTS — Voltage Input: Zero to 10 volts DC full scale. **Current Input:** Drop across 100 mV shunt selected for desired full scale operation.

OUTPUT SIGNAL — Pulse train, isolated from both inputs, whose rate is proportional to the instantaneous product of voltage and current. **Amplitude:** 5 volts. **Pulsewidth:** 2 μsec.

FULL SCALE COUNTING RATE — 50 x V x I counts/kWhr.

CONVERTERS

North Hills

VOLTAGE-TO-FREQUENCY

Complete line of Voltage-to-Frequency Converters for
- A/D conversion.
- Telemetering.
- Electronic integration.
- Process control applications.

All have one-cycle response, excellent linearity down to zero frequency, low TC.

FIXED RANGE SERIES DF-10, DF-12, AND LOW COST DF-20

12 models cover full-scale output frequencies from 25 to 100,000 Hz. 0 to 10 V input; >100 MΩ input impedance; 0.02% linearity; zero and full-scale trimmers.

WIDE-RANGE SERIES DF-100

Ac-line operated models with built-in regulated dc supplies; Uni- and bi-polar inputs; 0.02% linearity. Full-scale output frequency field-settable over 250:1 range with high resolution. X represents input level code, Y denotes full-scale frequency range.

Model No.	Input	Output
DF-100-X-Y	0 to +V, Process control currents	Frequency
DF-110-X-Y	−V to +V	Frequency and logic output indicating polarity
DF-120-X-Y	−V to +V	Separate frequencies for + and − inputs

X, Y	Input		Full-scale Freq. Range (Hz)
	Level	Impedance	
1	0 to 10 V	>100 MΩ	0.4 - 100
2	1 to 5 mA	1000 Ω	4 - 1000
3	4 to 20 mA	250 Ω	40 - 10,000
4	10 to 50 mA	100 Ω	400 - 100,000

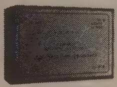
FREQUENCY-TO-VOLTAGE

Line of high-performance Frequency-to-Voltage Converters for
- Tachometry.
- Frequency monitoring.
- Telemetering.
- Control application.

All feature ripple-free outputs and excellent linearity.

STANDARD SERIES FD-10, FD-12, AND LOW COST FD-20

12 models cover full-scale input frequencies from 25 to 100,000 Hz. 0.1 to 100 V peak input; 0.1 MΩ input impedance; 0 to 10 V output; 0.02% linearity; negligible ripple; fast response.



FD-10
3.5 x 2.3 x 1 in.

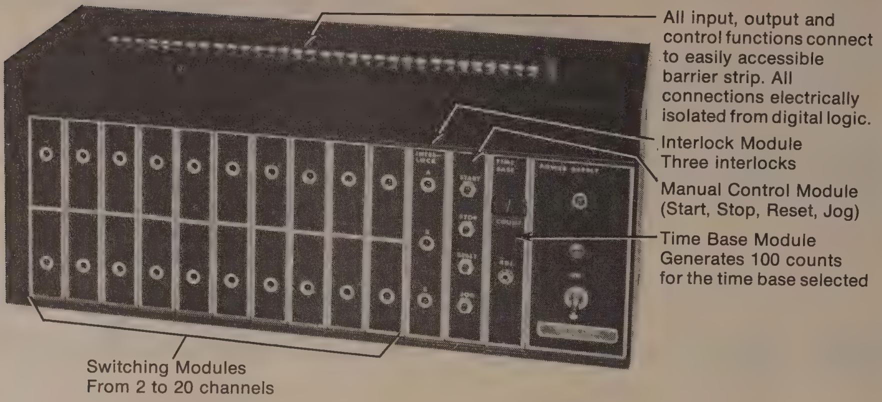
The Quantachron V Timer-Programmer by MATRIX CORPORATION

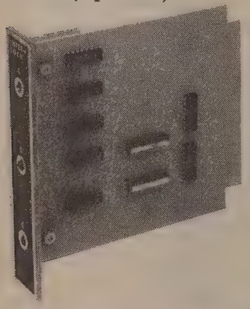


All input, output and control functions connect to easily accessible barrier strip. All connections electrically isolated from digital logic.
Interlock Module
Three interlocks
Manual Control Module
(Start, Stop, Reset, Jog)
Time Base Module
Generates 100 counts for the time base selected
Switching Modules
From 2 to 20 channels

A solid state "cam" timer-programmer with plug-in modules for easier maintenance and less down time.

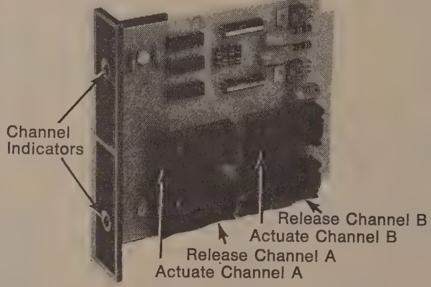
FEATURES: Field proven • All solid state high level logic • Triac output switching • Up to 20 channels per unit • Programmed by digital switches • Easy to maintain • Plug-in modules • Select only the number of channels and functions needed • Rack mounted, bench mount or enclosure mount • Digital display of count • Manual or remote control • Dimensions 16" wide x 6¾" high x 6" deep.

Interlock Module
(Optional)



The interlock module allows three independent external contacts (normally open) to interupt the count sequence and prevent an actuation of three output channels until the interlock is re-established. Indicators on the module show which of the three interlocks are open. When the interlock is re-established, the channel actuates and the count continues until the cycle is complete or another channel with an "open" interlock is reached.

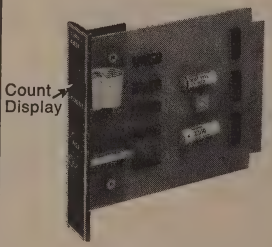
Switching Module
(2 channels per module)



Channel Indicators
Release Channel B
Actuate Channel B
Release Channel A
Actuate Channel A

This module receives the count code generated by the TIME BASE MODULE and compares it to the "Activate" and "Release" code programmed by the digital switches. Each module has two independent channels. Programming is done by setting the digital switches (by thumb or screwdriver) to the desired actuate and release times. When activated a triac, conservatively rated at 1 amp, is turned ON. A front panel indicator (LED) also is lit to show the channel is energized. All output circuits electrically isolated from logic. Select only the number of channels for the application. Modules can be added later if expansion is required.

Time Base Module



Count Display

The time base module generates 100 coded steps for the time base selected. The time base can be adjusted from 0.5 to 1000 seconds. The count is displayed by a front panel digital indicator (00 to 99). The 100 steps are converted into a code acted upon by the switching modules. Accuracy of the time base is 1% of the time cycle.

E-CELL (TM) COMPONENTS

First in Micro-Coulometry

- *Timing: Seconds to Months*
- *Integration: 1 to near ∞ events*
- *Non-Volatile Memory*
- *Low Cost*

① WHAT IS AN E-CELL DEVICE?

An E-CELL device is a new kind of circuit element that looks like a discrete electronic component but does the work of a complete electro-mechanical assembly. Its main functional part is a center "working" electrode, which is surrounded by an electrolyte. The unit's metallic container also serves as the second ("reservoir") electrode. Functionally, an E-CELL unit is a reversible micro-coulometer. By plating the "working" electrode, it converts electrical **current-time integrals (up to several thousand milliampere-sec.** into equivalent integrals of a mass of metal. Exactly one atom is transferred for each electron impressed on the E-CELL unit. Power drain is normally in the microwatt region. If the "working" electrode is then deplated at a known current, the deplating time will be proportional to the original integral. When a known mass is given as part of the initial condition (i.e. is preplated on the "working" electrode), this same process generates a precise time interval. The unit abruptly changes from a low-resistance to a high-resistance circuit element when its "working" electrode is completely deplated.

② HOW DO YOU USE AN E-CELL DEVICE?

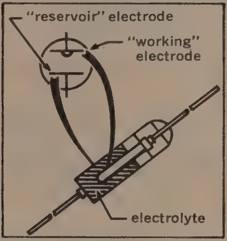
An E-CELL device has two generic functions: integration and timing. In both areas, the device is characterized by: electrical stability; small size; insensitivity to the physical environment; compatibility with the low current and voltage levels of modern circuitry; and the ability to operate over an extremely broad time domain. Compared to conventional mechanical and electro-mechanical devices which perform similar functions, an E-CELL device is much lower in cost.

For integration applications, an uncharged E-CELL unit accepts d-c, periodic, or random inputs in any waveshape — and stores the integral of these on the "working" electrode. To read out the stored value, the mass transfer process is reversed. The measured time to reach the point of the abrupt voltage swing, multiplied by the read-out current, gives a precise value which represents a total count of the stimuli presented to the unit. The Model 500 EDR Digital Readout Instrument provides a convenient means of making these measurements.

Operation in the timing mode is essentially the same as that for integration. The E-CELL unit is pre-charged with a known mass of plating material. In operation, this mass is transferred to the "reservoir" electrode (container) at a constant known rate determined by the current value used. When the "working" electrode has been deplated, an abrupt voltage swing signals that the pre-set time has elapsed. This signal is normally used as a bias transition with semiconductor devices.

③ APPLICATIONS

The scope of applications is as broad as counting and timing functions themselves. We have a repertoire of many convenient, economical circuit designs that have been proven in actual field use. Our experienced applications specialists will help you apply E-CELL coulometric techniques to your particular problems. Representative applications: **REPETITIVE TIMING AND CONTROL** Repeat cycle timing for domestic and industrial appliances. **PULSE COUNTING AND MEMORY** Adding and subtracting pulses. Counting events for vending machines, traffic, etc. Confidential memory for security devices. **CURRENT-TIME INTEGRATION** Battery charging controls. Environmental monitoring. Data accumulation. Laboratory integration in physics, chemistry, meteorology, etc. **USE-TIME MEASUREMENT** End-of-life, elapsed time, and warranty indication. Use-accounting for office, automotive, or industrial machines. **TIMING** Ordnance, safing and arming devices. Sonobuoy scuttling. Long delays (months).



E-CELL Device and Circuit Symbol

E-CELL INTEGRATING AND TIMING COMPONENTS

Type (Actual Size)	Charge µa-hr	Application	Range Accuracy	Physical Characteristics
Series 560	None	Integrating	10-1000 µa-hr ±4%	Single anode with axial leads. Current range up to 2000 µa. Temperature range −40°C to +85°C. (See Bulletin 500 for additional information.)

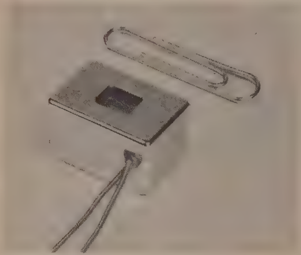
PRECISION TIMER CO., INC. / WESTBROOK, CONNECTICUT 06498 / (203) 399-6253

projects® unlimited Audio Indicators

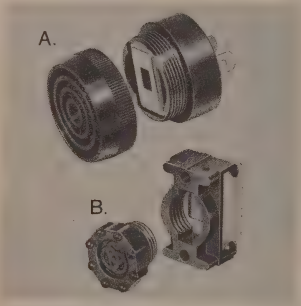
Solid state. No moving contacts. No arcing or RF noise. Low current drain. Built for long, dependable service.

Miniature solid state audio indicators



AI-100 series. Nickel plated, steel encased. Emits 76 dB tone @ 400 Hz. Maximum current 30 mA. Four models. AI-101 (3 vdc). AI-103W (3 vdc) with third wire collector output. AI-105 (5 vdc—shown at right) and AI-112 (12 vdc). Weight ¼ ounce (7 grams). Dimensions: .91″ L. x .47″ H. x .61″ W. (23 x 12 x 15.6 mm).

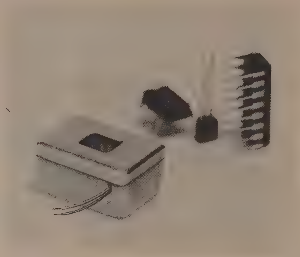
Plastic panel mounts for AI-100 series



(A) PM-100 fits 1⅛″ (28.5 mm) diameter opening in panels to ⅛″ (3.2 mm) thick. Terminals accept .250″ (6.4 mm) disconnects, screws or solder.

(B) PM-101 fits ½″ (12.7 mm) diameter opening in panels to ⅛″ (3.2 mm) thick. Mounts with bezel, screws or adhesive.

5-Volt audio indicators for IC's and logic circuits

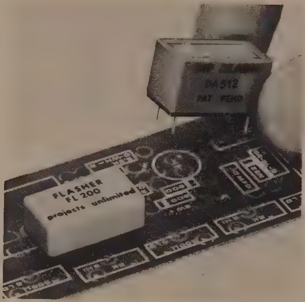


AI-105. 5 vdc. Draws 30 mA. Steel encased. Weighs only 7 grams. Ideal for compact, highly reliable warning or alarm system. Installs with panel mounts or tape.

The 2-pin audio indicator for PC boards and wave soldering

AI-400. 1.625″ (41.3 mm) diameter x ½″ (12.7 mm) high (38 x 13 mm). Emits approximately 70 dB tone at 2900 Hz. 3 to 15 vdc. Designed with 2 pins for PC board mounting and wave soldering. 10-20 mA. current consumption.

DIP-ALARM™ solid state audio indicators



DA-500 series. First miniature solid state indicator of its kind. Plugs in 16 pin DIP socket or mounts directly to PC board. Three models. DA-503 (3 vdc), DA-505 (5 vdc) and DA-512 (12 vdc) all with collector output available. Weight 3.5 grams. Dimensions: .90″ L. x .50″ H. x .50″ W. (22.9 x 12.7 x 12.7 mm). 76 dB at 400 Hz.

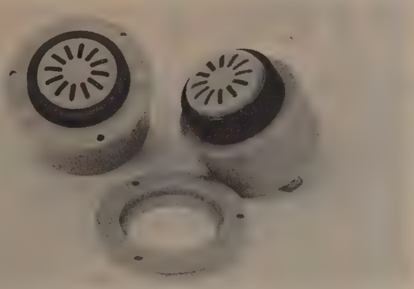
DIP-FLASH® solid state pulser

DIP-FLASH™
FL 200
projects unlimited

FL-200 series. Interrupts or pulses loads up to 200 mA, 5 to 15 vdc, at 90 cycles per minute. Fits standard 16 pin DIP socket or PC board. Ideal companion to AI and DA series audio indicators and LED's. Weight 2.5 grams. Dimensions: .90″ L. x .35″ H. x .50″ W. (22.9 x 8.0 x 12.7 mm).

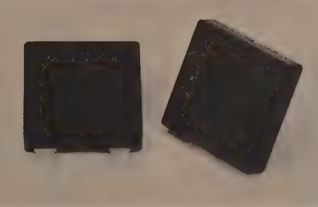
for every requirement

New panel mounted solid state audio indicators



AI-300 series. All are light gray, have .250″ (6.4 mm) fast-on terminals, fit 1⅛″ (28.5 mm) openings, have adapter ring for 1½″ (38.1 mm) to 1⅝″ (41.3 mm) holes. Depth required behind panel is 1″ (25.4 mm). AI-320 piezo crystal units produce approximately 80 dB @ 2900 Hz. 5 to 15 vdc. 10-20 mA. 28 gm. AI-330 pure tone audio indicator 80 dB @ 800 Hz. (special frequencies can be supplied on large quantity orders). 5 to 15 vdc. 40 mA. AI-340 has adjustable pure tone from 400 to 1000 Hz. Otherwise similar to AI-330. AI-350 for use with external oscillating circuits. 8 Ohms impedance.

Pulsing or continuous audio indicators

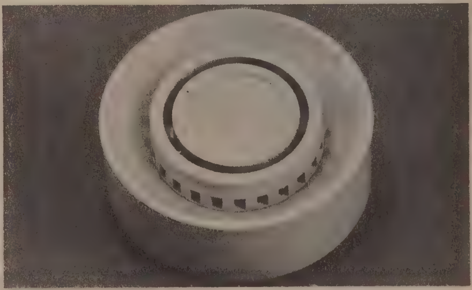


X-10. Piezo crystal. Emits approximately 90 dB at 3300 Hz. 10 mA. 3 to 7 vdc and 7 to 20 vdc. Dimensions: 1⅝″ square x 5/16″ high. (40 x 40 x 8 mm). Available with pins for PC mounting, fast-ons or wire. Choose continuous or pulsing model which is ⅝″ (16 mm) high. Excellent for computer terminals, etc. Weight 12 grams.

Wall or panel mount solid state audio indicators

X-40. White. Piezo crystal. 95 dB at 2700 Hz. 10 mA. Available in continuous, plus continuous and slow pulsing. Mounts with screws to wall or panel. Use wires or pins. 4⅛″ L. x 7/16″ H. x 2⅜″ W. (80 x 10 x 60 mm). Weight 35 grams.

Wall or panel mount solid state audio indicators



X-50. White. Piezo crystal. 110 dB at 2700 Hz. Excellent for fire alarms, burglar alarms, etc. Choose solid tone, or fast or slow pulsing, or all three. Mounts with screws. 3½″ diameter x 1½″ high (90 x 36 mm). Weight 41 grams.

TOUCH ACTIVATED CONTROLS

Microwave ovens, conventional ovens, dishwashers, washing machines, dryers, water softeners or wherever programmed or sequential events must be controlled, REGMO DATA can make your timing controls more accurate, more reliable, more advanced and, most importantly, we can make your appliance more saleable.

This new "Touch Timer" concept is just another excellent example of our innovative design, economically-engineered using the latest in state-of-the-art techniques . . .

Desirable features include:

- **Solid-state reliability**
- **High density packaging**
- **Digital display**
- **Timing range:** 1 second to 100 minutes (hours or days)
- **Time of day** (optional)
- **Accuracy:** Well within 1% over the entire specified time range
- **Operating voltage:** 95V to 130V A.C.
- **Output:** Currents in excess of 25 amps

No wonder America's leading microwave manufacturers have incorporated our patented Timing Controls into their appliances.

REGMO DATA is prepared to think creatively for you . . .

Contact us!

REGMO DATA CORPORATION

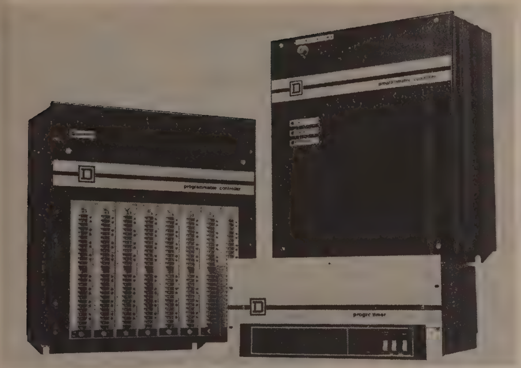
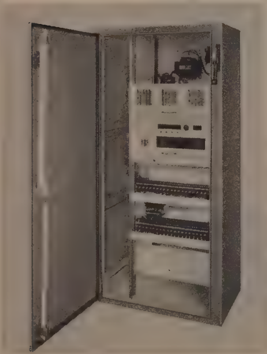
Designers and manufacturers of custom controls!

612/925-3800

Complete control systems capability.

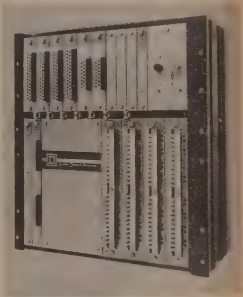


The new Class 8881 Programmable Controller is a solid state controller that is truly *programmable*. It delivers maximum flexibility at minimum cost for complex systems. The hardware permits memory loading using a single step programming technique called BLIP (Base Language Input Programming). This technique makes possible communication with the controller in the specific language of your particular industry. Memory capacity is expandable up to 16.000 words. The controller will accommodate up to 2.048 inputs and/or outputs in any combination in increments of 16. The Programmable Controller from Square D is adaptable to most applications, is suited for industrial environments and is extremely dependable.



The Program Sequence Controller—an economical solid state controller applicable for machines or processes which operate in a definite sequence. Programming is quick and easy—inputs and outputs are separately programmed at each step by simply inserting diode pins in matrix boards (no special programming equipment needed). Features include modular expandability of the number of inputs, outputs and steps. Also included are visual diagnostic aids. Options are available which permit programming time delays in any step, rearranging the step sequence, and handling some non-sequential operations. This pre-packaged controller, available in a NEMA 12 enclosure, is ready for immediate installation.

NORPAK® Solid State Control is the ideal logic control in industrial environments. NORPAK logic functions are available in two forms—Encapsulated or Plug-in. The Encapsulated version is suited to environmental extremes. It withstands shock, vibration, dust and corrosive fumes. Plug-in NORPAK components are suited to less hostile atmospheres and feature the ease of plug-in maintenance. Both forms, when properly applied, are virtually immune to electrical noise.



The Ladder Diagram Processor is a small, economical programmable controller designed to replace control systems using up to 32 relays. It can handle up to 32 inputs, 32 outputs, and up to 120 lines of relay ladder diagram. And the cost is comparable to hard-wired, electro-mechanical relay systems. Light Emitting Diode status indicators on all inputs, outputs, relay equivalents, and lines of the ladder diagram provide continuous monitoring of the control system. This means your plant electricians can work with the LDP by using the same relay control techniques they've developed over the years.

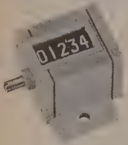
For specific engineering data on Programmable Controllers, Plug-in and Encapsulated Solid State Logic or Program Sequence Controllers, contact your nearby Square D field office. Or write Square D Company, Dept. SA-711, Milwaukee, Wisconsin 53201.

SQUARE D COMPANY

Wherever Electricity is Distributed and Controlled

Counting, Controlling, Printing Devices
MECHANICAL-ELECTRIC-ELECTRONIC

Small Square Case Mechanical Counter



Series 7458. Mech. totalizing. Nonreset. Low-friction design. Tamperproof. 5 to 7 figures, 3/16″ high. Direct, revolution, ratchet, rotary ratchet drives. Speed to 1000 cpm. For vending machines, elapsed time indicators, office machines.

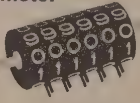
Small Reset Mechanical Counter

Series 7272. Totalizing. Knob reset (or nonreset). Rugged, long life. 4 or 5 figures, 3/16″ high. Speed to 1000 cpm. Ratchet or revolution drive.

Medium Size Mechanical Counter

Series 7428. Totalizing. Reset or nonreset. Easy-to-read figures, .270″ high. Speed to 2000 cpm. 3 to 8 figures. Direct, revolution, or rotary ratchet drives. Also with right angle drive and various gear ratios (Series 7434).

Veedometer

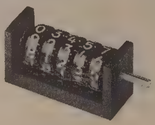


Series 1771. Mech. totalizing. Compact — yet with big figures. Low cost. Direct drive. Reset or nonreset. Speed to 5000 cpm. For OEM applications: elapsed time indicators, water meters, mileage odometers, etc.

Precision Digital Timer

Series 7665. Extremely accurate digital control timer. Controls time to 59 minutes, 55 seconds. Large .375″ high figures. Subtracts from manually set digital time. Actuates SPDT and bell at zero. Ideal for automatic time control of home appliances, laboratory instruments, medical equipment, and production processes.

Veederline/Varicounter

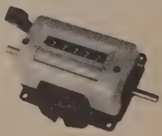


Series 1996. Mechanical totalizing. Direct drive, nonreset. Open frame. Many varieties. 3-7 figures, 3/16″ or 1/4″ high. Dual or tandem models available. Speed to 25,000 cpm.

Visicounter

Series 1667. Mech. totalizing. Reset. Heavy duty. 6 figures, .345″ high. Speed to 5000 cpm. Ratchet, revolution, or geared drive. Also with right angle drive (Series 1953).

Hi-Speed Quick Reset Predetermining Counter

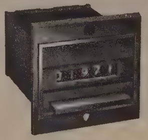


Series 7283. Finest all-mech. ctr. Speed to 6000 cpm. Count life 500,000,000! Reset life 1,000,000 guaranteed! Adjustable preset. Counts and opens switch. Reset restores counter to preset number. Rotary/ratchet drive. With panel mtg./electric reset (7601 Series) totalizing only (7298 Series).

Digi-Master II Predetermining Counter

Series 7129. Electronic preset counter. 4 digits, LED display, 1 or 2 presets. Output is SPDT 10A relay. Inputs are V-R photohead, switch, customer-supplied pulse, rotary pulse generator or Model 6144 magnetic sensor. Auto reset, manual and remote.

Low Cost Electric Counter with or without Bar Reset

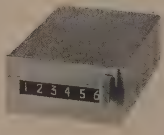


Series 7437/38. Low cost totalizer. 5, 6, 7 figs. nonreset. 5 figs. reset. 5/32″ high. Several mtg. versions. In 12, 24v-dc, 24, 15 or 230v-ac. UL and CSA recognized.

General Purpose Electric Counter

Series 7443. General purpose totalizing ctr. w/ac coil — no rectifier burnout. 6 figs. 3/16″ high, ac and dc voltages. Several mountings. UL, CSA recognized.

Hi-Speed Electric Counter



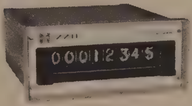
Series 7440. Electric reset. Compact. Speeds to 3000 cpm. Pawl or plug-in. Programmed mechanism ensures reliable reset. Manual, elec. reset or nonreset.

Total Capability from VEEDER-ROOT

Hi-Performance Predetermining Electric Counter

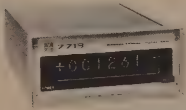
Series 7441. Interlock on preset number. Preset buttons change preset number. Programmed reset mechanism. Manual or elec. reset.

Unidirectional Totalizer



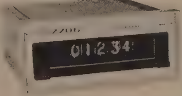
Series 7711. Electronic 4 or 6 digits. Inputs: V-R photohead. Optional: contact closure, incremental encoders, pulse or sine wave.

Bidirectional Totalizer



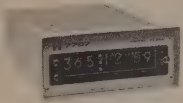
Series 7713. Electronic. 4 or 6 digits with ± sign. Std. input Model 1848 Encoder. Other inputs optional. Utilizes DTL/TTL microcircuits.

Time Base Counter



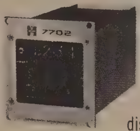
Series 7706. Electronic time base ctr. 3½" high. 2 to 5 digits with speeds to 500kHz. Displays events/time. Standard input: V/R photoheads. Options are contact closure, incremental encoders, pulse or sine wave. Static display.

Digital Clock



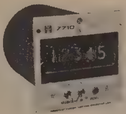
Series 7707 Monitors/displays real time through one year. 7 decades: 2 for minutes, 2 for hours, 3 for day of year. Solid state. Shows year in 1 to 365 days (1 to 366 for leap year). 12 hour am/pm or 24 hour models available. Latched BCD data and timing pulse output standard. Batteries and standby circuitry optional.

Predetermining Counter



Series 7702. Electronic preset ctr. 2 to 4 digits with one preset. With or without display. Standard inputs are contact closure, V/R photohead, or D.C. pulse — depends on model. Output is 2A. triac. Auto reset without loss of counts. Variable hold time on output. Panel mount.

Elapsed Time Indicator



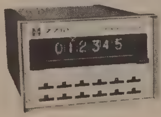
Series 7710. Electronic stopwatch measures/displays elapsed time. 5½ digits, quartz crystal oscillator accurate to 0.0005% of reading. Reset button stops/returns display to zero. Accepts signals from electromechanical and electronic devices. Triac output.

Digital Printer

Series 7480. Reliability/versatility at low cost. Prints on paper tape, cards, or oversize forms. Stores, displays and prints BCD data. Up to 10 columns. Up to 16 numerals and symbols per column.

The Total Capability Company

Unidirectional Preset Counter



Series 7712. Electronic preset ctr. 2 to 6 digits. One or two presets standard. Others available. SPDT output relays. Standard input: V/R photoheads. Options are contact closure, incremental encoders, pulse or sine wave.

Bidirectional Preset Counter

Series 7714. Electronic bidirectional preset ctr. 2 to 6 digits with ± sign. Available in multi-row presets. 5¼" high. High speed with auto reset or latch and hold. SPDT output relays. Standard input is Model 1848 Encoder. Other inputs optional.

Remote Ticket Printer

Series 7690. Low cost counter and printer in one package. The "simple" printing machine. Prints up to 7 copies clearly on tickets and carbon packs. Has optional LED display for unit totalizing and 7-figure accumulative totalizer. Start/print switch also actuates interlock relay that permits remote motor control. Reliable heavy duty print mechanism.

60	90	0-3599 BCD	±15 VDC; +5V; 115 VAC Ref.	5 x 3¾ x 1	VSD-609SM-D	2. Self Contained Power Supplies
400	11.8	14 Bit Binary	±15 VDC; +5V; 26 VAC Ref.	2⅝ x 3⅛ x .82	VSD-401SM	3. −55°C to +85°C Operating Temperature
400	11.8	0-3599 BCD	±15 VDC; +5V; 26 VAC Ref.	5 x 3¾ x 1	VSD-401SM-D	4. Serial Output 5. ± BCD Output
400	90	14 Bit Binary	±15 VDC; +5V; 115 VAC Ref.	2⅝ x 3⅛ x .82	VSD-409SM	6. Multi-speed Conversion
400	90	0-3599 BCD	±15 VDC; +5V; 115 VAC Ref.	5 x 3¾ x 1	VSD-409SM-D	7. Multi-channel Conversion

ALL VERNITRON CONVERTERS WILL:

1. Operate over 0-70°C range.
2. Have a Digital Interface with DTL or TTL Compatible Logic.
3. Accuracy — ±4 minutes ±1.19
4. Track at 360°/second (400Hz), 180°/second (60Hz).
5. Be repairable in the field, if ever necessary.

DIGITAL TO SYNCHRO/RESOLVER CONVERTERS

Hz	Output Voltage	V.A. Output	Accuracy	Power Requirements	Size (inch)	Model No.	Available Options
60	90	2	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 2*	VDS-609SP-2	1. Modular Configuration
60	90	5	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 1**	VDS-609SP-5	2. Self Contained Power Supplies
400	11.8	2	±1 LSB	±15 VDC; +5 VDC; 26 VAC Ref.	5 x 4 x 2	VDS-401SP-2	3. −55°C to +85°C Operating Temperature
400	11.8	5	±1 LSB	±15 VDC; +5 VDC; 26 VAC Ref.	5 x 4 x 1**	VDS-401SP-5	
400	90	2	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 2*	VDS-409SP-2	4. Serial Input
400	90	5	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 1**	VDS-409SP-5	5. Multi-channel Inputs

ALL VERNITRON CONVERTERS HAVE:

1. 12 Bit parallel binary coded angle input (MSB = 180°, . . .).
2. Digital interface compatible with DTL or TTL logic.
3. Field repairability, if ever necessary.
4. Storage Registers available at no extra cost.

* Transformers to be mounted externally.

** Transformers, power transistors, and heat sinks to be mounted externally. Consult factory for required volume.

SPECIAL CONVERTERS

Type Converter	Part Number	Description
Solid State Synchro Signal Amplifier	VSA-101	Input: 3 Wire Synchro Data, 90V L-L, 60 or 400 Hz; 115V Reference Output: 3 Wire Synchro Data, 90V L-L, 60 or 400 Hz Channels: Two, each completely isolated Accuracy: Plus/Minus 6 minutes of arc Size: Standard 19″ Rack (19″ x 6″ x 20″) Misc.: Self-contained Power Supplies; Short Circuit Protected; Automatic Cutoff of DC Supply if Overload exists; Overload Indicator
Synchro/Resolver to Linear DC Converter	VSDC-401-SP VSDC-409-SP VSDC-609-SP	All parameters identical to those of the Synchro/Resolver to Digital converters, except: 1) Accuracy — ±10′ at room temperature 2) Digital output also available in addition to DC 3) Output 0-10 VDC, 0-5 VDC, 0-±10 VDC, 0-±5 VDC
Synchro/Resolver to Sine-Cosine DC Converter	VSDC-401-SP-A VSDC-409-SP-A VSDC-609-SP-A	All parameters identical to those of the Synchro/Resolver to Digital converters, except: 1) Accuracy — ±10′ of arc at room temperature 2) Output ranges same as Synchro to DC above, except in sine-cosine form
Sine-Cosine DC to Synchro Converter	VDCD-401-SP-A VDCD-409-SP-A VDCD-609-SP-A	All parameters identical to those of the Digital to Synchro/Resolver converters, except: 1) Accuracy — ±10′ of arc at room temperature (Dependent upon load) 2) Input Levels 0-10 VDC, 0-5 VDC, 0-±10 VDC, 0-±5 VDC

ELECTRO-MAGNETIC READOUTS

Problems with VISIBILITY?
Problems with LIFE?
Problems with POWER SHUTDOWN?

Call VERNITECH (516) 586-5100 for selection from the widest available range of RELIABLE electro-magnetic readouts

The tiny module that converts digital inputs to an electro-magnetic readout. In addition to standard models listed, Vernitech will manufacture to your specifications.

Part No.	Volts D.C.	No. of Char.	Size of Char.	Pulse Mode	No. of Leads or Term.
06VEA-0022	10	11	.156 x .156	1-1-1-1	12 L
06VBA-0048	10	10	.156 x .156	1-2-1-2	6 T
06VBD-1105 3 Position Flag	10	3	.187 x .187	Return to Flag with Power off	3 T
12VBB-1002	6	10	.281 x .250	Polarity Reversal	6 P/C

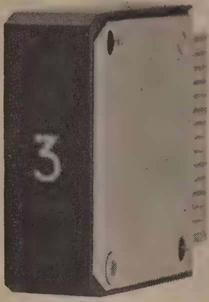
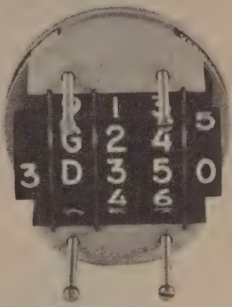
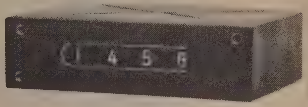
Write or phone today for detailed bulletin and stock list.



VERNIDEX STANDARD
½ x 1½ x 1½





VERNIDEX MINIATURE

Vernitech has fully qualified hermetically sealed units to military specs with regard to:

Altitude	Shock	Fungus	Radio Interference
Temperature	Salt Spray	Explosion	Life
Vibration	Sand/Dust	Acceleration	Fogging

ALL MODELS AVAILABLE WITH FULL LOGIC SELF-CONTAINED—ACCEPTS BCD INPUT

VIBRATORS

VERNITRON CORP.

The VERNIBRATOR is an electro-mechanical vibrating device originally designed to eliminate stiction from instruments such as altimeters, etc. The Vernitech vibrator produces exceptionally High-G forces over 10,000 hours of failure and maintenance-free operation, while consistently attaining reliable low-voltage operation.

Consult the factory for either standard or custom-made designs.

Part No.	Input Voltage	Input Current	Peak G's	Size (Inches)	Weight
PX 10014	28 VDC	50 ma	.75 - 2.0	1.6 x .67 x .65	28 grams
PX 10018	13-15 VDC	25 ma max. @ 13V	.75 - 2.0	1.6 x .67 x .65	28 grams

HIGH-PERFORMANCE ELECTROMECHANICAL ACTUATORS

VARO INC ELECTROKINETICS DIVISION

VARO

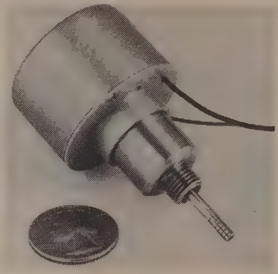
VARO EK DIVISION supplies a broad range of custom designed electromechanical actuators for demanding commercial and military applications. Our equipment is now being used for aircraft aerodynamic surface controls, antenna drive and positioning systems, aircraft air-conditioning controls, baggage and cargo handling and other systems requiring high-reliability and demanding performance.

Varo actuators combine a variety of custom designed mechanical devices such as: gearboxes, brakes, clutches, governors and torque limiters. Control circuitry can be supplied for your application.

We also supply high-temperature and high-pressure solenoid valves for missile servo systems, aircraft air-conditioning and fuel control systems.

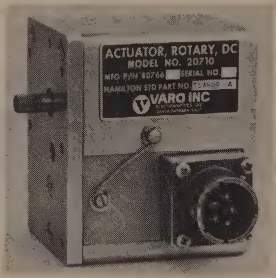
The units shown below represent a few of the types commonly designed and manufactured. We may have an existing design that will meet your requirements. Call or write Department 420 VARO INC EK DIVISION.

20707 MOTOR



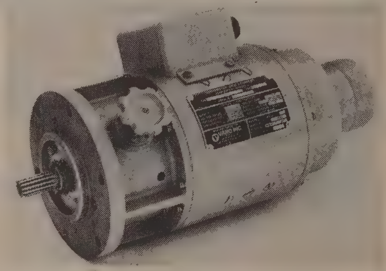
Direct Current PM Motor Electronically Governed to Provide Speed Regulation of ± 0.5 Percent.

20710 ACTUATOR



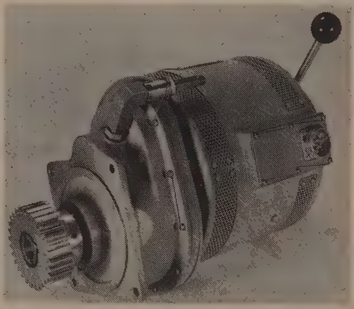
30 IN-LB at 6°/SEC DC Servoactuator Utilized for High Response, Reversing Pulse Width Modulated Servo Systems.

20693 SERVOMOTOR



Linear Torque DC Servomotor Rated at 3.24 FT-LB at 2000 RPM, Equipped with Tachometer, Electromagnetic Brake and Manual Drive.

20590 ACTUATOR



2 H.P., 60 HZ, 115/208V Continuous Duty

SERIES 1100 CRYSTAL OSCILLATORS

HIGH STABILITY OVEN-CONTROLLED

MODEL 1150

The Model 1150 is a very rugged, high precision, crystal oscillator specifically designed for use in satellite navigation systems or other applications which demand a precise time base frequency reference.

Frequency:	5 MHz
Output:	1 vrms sine wave
Aging:	5 X 10^{-11}/day ultimate aging
Input Voltage:	27 VDC ±10%
Input Power:	2.5 watts operating
Size:	2⅜" X 3-3/16" X 5"
Weight:	2 lbs max

MODEL 1115

The Model 1115 is specifically designed for use in undersea equipment or other applications where high stability and minimal power consumption are of prime importance.

Frequency:	5 MHz
Output:	1 vrms sine wave
Aging:	1 X 10^{-9}/day ultimate aging
Input Voltage:	12 to 15 VDC ±5%
Input Power:	150 mw @ 25°C (typical)
Size:	2" diameter X 5½" length

MODEL 1120

The Model 1120 is a compact, rugged crystal oscillator specifically designed for use in counters, synthesizers and communications equipment.

Frequency:	1 MHz, 5 MHz or 10 MHz
Output:	1 vrms sine wave
Aging:	1 X 10^{-9}/day ultimate aging
Input Voltage:	12v to 27v DC
Power Consumption:	3 watts operating (typical)
Size:	2¼" X 2⅛" X 4"

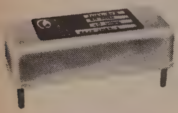
CRYSTALS/OSCILLATORS/CRYSTAL FILTERS

OSCILLATORS

1 Hz to 250 MHz

ANALOG ENGINEERS — We haven't forgotten you. Accutronics has not devoted all its engineering talents to digital devices which are compatible with TTL, ECL, MECL and COS/MOS logic. In our standard product line we carry a complete line of SINE WAVE oscillators from 1 Hz to 250 MHz. Space does not permit us to depict all of our units, but if you review the units below, more than likely you will find one which is GREAT for your ANALOG application.



SERIES 100

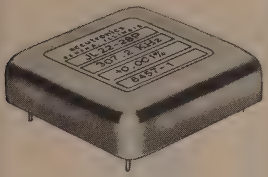
OSCILLATORS

1 Hz to 150 MHz

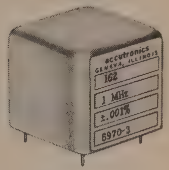
DIGITAL DESIGN ENGINEERS — YES! In conjunction with our line of sinewave oscillators, we are still producing all types of digital units. We can offer you compatibility with COS/MOS, TTL, DTL and other logic functions. We package these units in any one of the configurations shown in our line of sinewave standards. FOR EXAMPLE: Review the specifications on our Series 90 and 162 below, more than likely they will fill your application requirements.



SERIES 90

PARAMETER (1)	SERIES 90	SERIES 162
Frequency Range	20 Hz / 6 MHz	1 Hz / 1 MHz
Supply Voltage	+5 VDC	+20 VDC
Rise/Fall Time	<50 ns / <25 ns	<250 ns / <200 ns
Source Voltage	>2.4V	+15V min. @ 10 MOS Loads
Sink Voltage	<.4V	+.1V max. @ 10 MOS Loads
Load	TTL / DTL	MOS Logic
−55°C to +75°C (2)	±.005%	±.005%
0 to +60°C (2)	±.001%	±.001%
+15°C to +35°C (2)	±.0005%	±.0005%
Current Drain	<60 ma @ 23 Hz	<5 ma @ 1 Hz
Symmetry	50 / 50 ±1%	50 / 50 ±1%
Size	2.0 x 2.0 x .500	1.5 x 1.5 x .625

(1) These are typical specifications — please consult factory for more details.
(2) Frequency tolerance versus temperature.



SERIES 162

PERHAPS your application requires something more exotic in packaging techniques, WHY NOT TRY our Series 90A, 80, 50 or 40? The ultimates in discrete "state of the art technology."

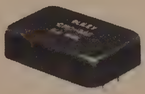
CRYSTAL OSCILLATORS

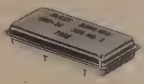
Crystal Clock Oscillators

BLILEY OFFERS A COMPLETE LINE OF CRYSTAL CLOCK OSCILLATORS BACKED UP BY TOP TECHNOLOGY IN THE FIELD OF CRYSTAL CONTROLLED DEVICES. A WIDE CHOICE OF MODELS IS AVAILABLE WITH EITHER SINE WAVE OR LOGIC OUTPUT TO DRIVE TTL CIRCUITRY. SELECTION OF THE CLOCK OSCILLATOR THAT IS BEST FOR YOUR APPLICATION IS DICTATED BY THE SIZE AND PERFORMANCE PARAMETERS AS WELL AS ECONOMIC CONSIDERATIONS. ALL MODELS HAVE BEEN DESIGNED WITH PRIMARY EMPHASIS ON QUALITY.

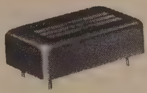
CMO-8



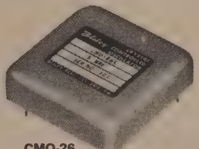
CMO-32C



CKO-31



CMO-3



CMO-26

SPECIFICATION GUIDELINES

- MODEL CMO-8 IS SMALLEST SIZE. MODEL CMO-32C HAS LOWEST PRICE.
- MODELS CMO-8, CMO-32C, CKO-31 MOUNT IN STANDARD 14 PIN DIP SOCKETS, OR DIRECTLY ON PC BOARDS.
- ALL STANDARD MODELS ARE DESIGNED FOR OPERATION ON +5VDC WITH TTL LOGIC OUTPUT. CMOS LOGIC OUTPUT IS AVAILABLE AS A CUSTOM OPTION.
- MODEL CKO-31 IS COLDWELD SEALED.
- MODEL CMO-26 IS HERMETICALLY SEALED. ELECTRICAL OR MECHANICAL TRIM ARE AVAILABLE AS CUSTOM OPTION.

MODEL	FREQUENCY RANGE	TEMPERATURE RANGE			LOGIC OUTPUT
		0° TO +50°C OVERALL FREQ. TOL.	0° TO +70°C OVERALL FREQ. TOL.	−20° TO +70°C OVERALL FREQ. TOL.

Cuts: JT • H (+5° Flexural) • NT E (+5° Extensional) D • DT Bar

The Bulova crystals for the lower frequency ranges—1kHz to 1 MHz—include units specifically suited for filter and for oscillator applications. The ST, DT and DT Bar cuts are equally suitable for either use. The H (+5° Extensional) and E (+5° Flexural) are primarily used in filter applications, while the NT is usually used as an oscillator.

The various holders available for specific frequency ranges are listed, by cuts, in the accompanying table. The illustrations below show the basic configurations and list the most pertinent dimensions, keyed to the dimensional drawings.

Bulova has been a major supplier of crystals for more than 25 years, during which it has acquired a wealth of experience. Engineering assistance is available. You are invited to call early in your planning.

Crystals for Fundamental Frequencies – 1 to 35 MHz

Bulova has produced hundreds of thousands of crystals for filter applications. These have covered virtually the complete spectrum for quartz resonators and can be supplied in small lots as well as production quantities. A wide variety of packages are available in both coldweld and solder seal. Crystal Q's in excess of 1 x 10^6 can be supplied in some ranges and spurious mode suppression from 20 db to 65 db depending on the parameters required can be achieved.

TYPICAL PERFORMANCE

Typical performance available for the fundamental frequencies is:

Frequency tolerance: as tight as ± .002% from ±55° to +105°C, .0003% from −10°C to +60°C with reference to +25°C

Frequency Stability: Aging, 5 parts in 10^6/30 days to 4 parts 10^8/30 depending upon package, frequency and temperature

Drive Level: 0.01mW to 10mW

Crystals for Overtone Frequencies - 10 to 150 MHz

For more than 25 years Bulova has been a major supplier of crystals for MIL Spec, general industrial and special applications. These latter include: matched sets for filter and high stability oscillator applications, radiation hardened units and packaging to withstand high shock.

Engineering assistant is available.
You are invited to call early in your planning.

TYPICAL PERFORMANCE

Typical performance available for the overtone frequencies is:

Frequency Tolerance: as tight as ±.002% from -55°C to + 105°C with reference to +25°C

Frequency Stability: Aging, 5 in 10^6/30 days to 1 in 10^7/30 days depending upon packaging, frequency and temperature

Drive Level: 0.01mW to 2mW

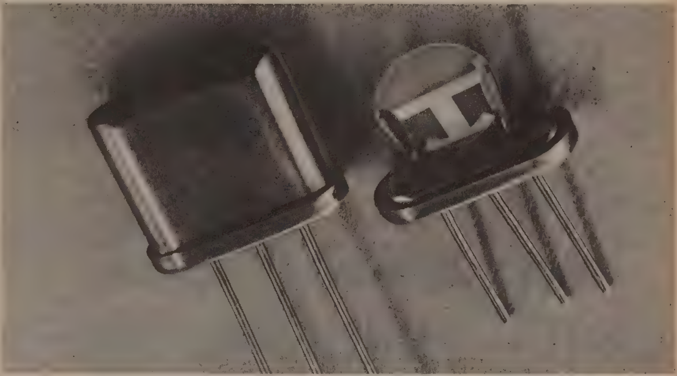
Crystal Filters–1 to 185 MHz

for Fundamental and Overtone Modes



Monolithic crystal filters offered by Bulova cover the range from approximately 1MHz to 180MHz, extending from the fundamental into the seventh overtone. Included are relatively simple 2-pole devices and more complex, multipole units—up to 10-pole response. Performance characteristics of some representative units are illustrated in the accompanying table.

Modern filter synthesis techniques are used to produce multiple units either as cascaded 2-pole devices which are electrically coupled, or by acoustically coupling resonators on a single quartz wafer. The illustrations opposite show the various holders available, their dimensions and the frequency range they cover. Both coldwelded and solder sealed types are included.

Monolithic crystal filters for frequencies lower than those listed or higher than the indicated 180MHz can be provided. Engineering assistance is available and your inquiry early in your program is welcomed.

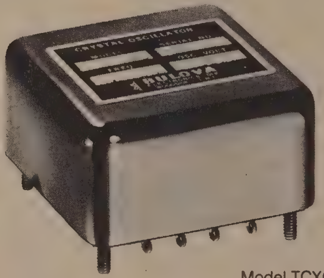
BULOVA® Crystal Oscillators

Bulova offers a full line of both Military and Industrial crystal oscillators—provides a total capability from custom engineering to volume production, using the latest automatic test equipment. Bulova's full line of crystal oscillators includes • high stability crystal oscillators • temperature compensated crystal oscillators (TCXO) • computer clock oscillators

State-of-the-Art TCXO's With Frequency Stability of ±2pp10^7 from −40 to +75°C

And just check these other features:

- Components derated for long life and high reliability
- Meet MIL-E-5400, MIL-E-4970 and MIL-E-16400 environmental specifications
- Buffer and Output amplifiers
- Hermetically sealed
- Self-contained voltage regulator
- Low power consumption
- Small size, only 2″ x 2″ x 1″, weighs only 5 ozs.



Model TCXO-2

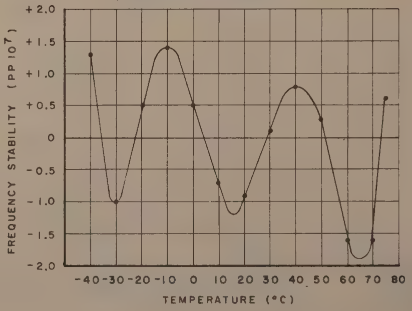
The Bulova Model TCXO-2 is a temperature compensated crystal oscillator employing a voltage variable capacitance diode and thermistor network to maintain frequency stability over wide temperature ranges without the use of an oven. This unit has been designed for use in applications where power, space and weight restrictions preclude the use of oven for temperature stabilization, yet which require exceptional stability.

BASIC SPECIFICATIONS

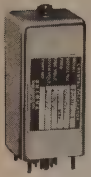
Frequency Range:	3 to 5MHz
Frequency Stability	
Temperature:	±2pp10^7 maximum over the temperature range of −40°C to +75°C
Voltage:	±5pp10^8 maximum for a supply variation of ±5%
Load:	±1pp10^8 for a load variation of ±10%
Frequency Aging:	±1/10^8 per week at 60°C
Output Voltage:	125 millivolts RMS into 50 ohms
Input Power:	12vDC ±5% at 50 milliwatts maximum
Size:	2″ x 2″ x 1″
Weight:	5.0 oz.

Frequency Stability vs Temperature

(Measured Performance)



HIGH STABILITY CRYSTAL OSCILLATORS



PCOXO

The high frequency stability of these oscillators results from housing a high precision crystal and an oscillator circuit with AGC to maintain low constant crystal drive in a stable DC proportional control oven.

BULOVA®

Crystals for Digital Watches

Actual Size

Advanced manufacturing techniques for high volume production are enabling Bulova's Electronics Division to make crystal packages for digital watch modules which offer superior performance while remaining competitively priced. Initial application of these new crystals was in Bulova's own Accuquartz® Digital watches.

Standard units have a frequency of 32,768 Hz. They are designed for application in both LED and LCD watches. Other frequencies can be provided in comparable low cost packages.

Standard Frequency: 32,768 Hz

Basic Specifications

Model Number	WA-32-10-20A
Crystal Plate	XY' Flexure
Frequency^1	32,768 Hz
Adjustment Tolerance^2 @ 10 pf or as req.	± 30 ppm
Drive Level, max.	10 μW
Series resistance, max.	20 K Ω
Q Factor	>50K
Turnover Temperature	29°C ± 4°C
Frequency Stability 24°C-34°C	3 ppm max.
Shock	3000g .25 ms
Aging After 2 Weeks	1 x 10^{-8}/Day, max.
Aging After 1 Year	1 x 10^{-9}/Day, typ
Operating Temp. Range	-10°C to +60°C

Notes:

1. *Available at other frequencies*
2. *Also available at 20 and 25 ppm*

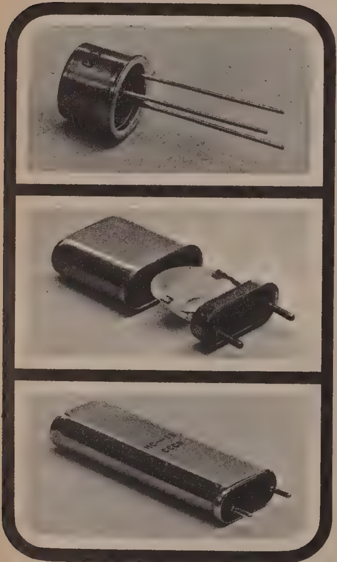
crystal problems? we solve them.



HIGH RELIABILITY CRYSTALS WITH FAST DELIVERY . . . are only two reasons why the name Croven is on buyer's lists and engineer's specifications around the world. Croven specializes in Coldweld Crystals to meet the exceptional reliability, frequency stability and low aging characteristics so vital to the electronic and aerospace industries of today. We will be pleased to assist your individual requirements. Just call us or write for catalogue.

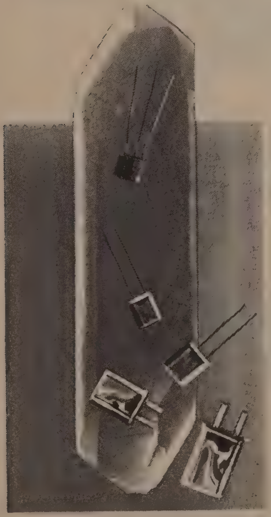
help you!
croven LIMITED



1954 WAS THE YEAR WE STARTED MAKING HIGH RELIABLE CRYSTALS

Since that time we have only looked forward. We are constantly involved in designing crystals for such sophisticated applications as satelites, missiles, radar, microwave communications and many other special applications where just the average stock crystal will not do. Our engineers are as close as your phone so please feel free to consult us on any of your crystal problems.

CRYSTALS

SOLDER SEAL CRYSTALS 1 MHz — 154 MHz

Inexpensive solder seal crystals are ideal for applications in which long-term stabilities in the range of 5-10 ppm/(1st) year are acceptable. CTS Knights' solder seal crystals are used in digital clock circuits, test and measuring instruments and commercial as well as military communications equipment. CTS Knights test lab is government approved for qualification testing to military specification MIL-C-3098F.

Data shown in the table and graphs applies to typical crystal designs. CTS Knights will, at no additional cost, design a crystal for your specific oscillator requirements. When ordering a crystal, the following minimal specifications must be given: 1. Frequency, 2. Calibration Tolerance at 25°C. (or Oven temperature), 3. Mode (Fundamental or Overtone), 4. Load Capacitance, 5. Holder.

CTS Knights is QPL approved on the following Military Crystal types:

CRYSTALS & CRYSTAL OSCILLATORS

TEMPERATURE COMPENSATED CRYSTALS (TCX)

The temperature compensated crystal (TCX) is designed to give good stability over a broad temperature range at a minimum of cost. Typical applications are land mobile and radio telephone equipment that require a stability of ±5 ppm over an ambient temperature range of −30°C to +60°C. The TCX is easily furnished in a variety of frequencies. Extremely low power consumption makes the TCX ideal for portable applications.

TEMPERATURE COMPENSATED OSCILLATORS (TCXO)

Low power requirements, high stability and excellent environmental capability characterize CTS Knights' temperature compensated crystal oscillators. CTS Knights has many years experience in developing economical TCXO designs for instrument and communications applications. Stabilities as high as ±5 x 10^{-7} over a wide temperature range are practical. CTS Knights can supply all TCXO designs with sine wave or TTL compatible output. Special designs available.

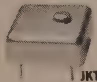
OPTIONS

Option A: 4-40 inserts are available in lieu of the 4-40 studs.

Option B: Case available with 4 .040 dia. mounting terminals in lieu of the 4 4-40 studs and trim access centered. Connections to the oscillator are to the 4 .040 terminals.

VOLTAGE CONTROLLED CRYSTAL OSCILLATORS



JKTO-86

Voltage controlled oscillators can be supplied by CTS Knights for various stability versus temperature requirements by adding oven control or temperature compensating circuitry. Contact CTS Knights for special requirements.

HIGH STABILITY OVENIZED CRYSTAL OSCILLATORS

CTS Knights ovenized oscillators are available in thermostatically controlled models as well as proportional control models. A variety of design options is available to the user, including very high stability, low power, small size and sine wave or square wave (TTL or CMOS) output. Contact CTS Knights for your special requirements.

Precise control and reliability are the main features of CTS Knights ovens. Snap-action thermostats known for their long life are used on every thermostat design. Hermetically sealed, double insulated thermostats are used on 115 V models and are optional on others. Contact CTS Knights for special cavity and internal component mounting requirements.

CRYSTAL CLOCK OSCILLATORS

CTS Knights' crystal clock oscillators provide a highly reliable timing function for military and commercial digital applications. All CTS crystal clocks have hermetically sealed crystals. The discrete packaged units such as the JKTO-77 and 78 are useful in applications where size is not a problem. The JKTO-79 series cold-weld sealed hybrid oscillators are ideal for applications where size must be reduced to a minimum while maintaining reliability. The most economical hybrid clock oscillator in the CTS line is the JKTO-80. Contact CTS for special frequencies or output requirements.

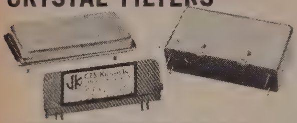
CRYSTAL FILTERS

CRYSTAL FILTERS



High quality CTS Knights crystal filters are used in FM receivers, narrow band FM transceivers, single sideband transceivers, land mobile radios and military communications equipment. CTS Knights' computer filter analysis assures the customer of getting the most economical filter for his application. Contact CTS Knights to discuss your specific filter requirements.

Type	Frequency	3 db BW	Shape Factor†	Ult. Atten.	I.L.	Z In/Out*	Poles	Operating Temperature	Dimensional Drawing

SPECIALISTS IN FREQUENCY MANAGEMENT

CRYSTAL FILTERS & DISCRIMINATORS

MONOLITHIC CRYSTAL FILTERS

CTS Knights is a leader in the high volume production of monolithic crystal filters. We have the capability to design and manufacture monolithic crystal filters to fulfill your specific requirement. Our experienced engineering staff will assist you in tailoring monolithic crystal filters that can be combined to form 4, 6, or 8 pole filters. This building block approach allows you to take advantage of the low cost and small size of the monolithic crystal filter, and also gives the overall advantage of building your own filter in-house.

CTS Holder	Frequency Range	F1 - F2	Bandwidth 3 db	Load	Poles	Shape Factor	Dimensional Outline
H3W3	10-15 MHz	5 thru 35 KHz	7-40 KHz	Note 1	2	5.5-1 (30-3 db)	FIG. 38
H3T3	15-23 MHz	10 thru 45 KHz	14-60 KHz	Note 1	2	5.5-1 (30-3 db)	FIG. 39

Note 1: Terminating Resistance $= 1.2 \frac{BW3}{2 f^2 C_m}$

C_m = Motional Capacitance

BW3 = Bandwidth at 3 db.

CRYSTAL DISCRIMINATORS

CTS Knights crystal discriminators offer excellent cross-over stability, low distortion and small size. The 964-2000 Series offers a built-in hybrid microcircuit that produces full limiting with 5 mv to 2 v input. Crystal discriminators are used in FM detection and phaselock loop applications.

Series	Size	Frequency	% of Freq. BW	Stability VS. Temperature	Linearity	Input Voltage	Sensitivity	Output Z	Dimensional Drawing
964-1000	1.0″ SQ.x.500″	18-25 MHz	.05% to .25% of f	$\pm 3\times10^{-5}$ −20° to 85°C	1 to 5%	2 V into 50 ohms	3.0 V/BW P-P	100 K	FIG. 36
964-2000*	1.0″ SQ.x.500″	10-25 MHz	.05% to .25% of f	$\pm 3\times10^{-5}$ −20° to 85°C	1 to 5%	5 MV to 2 V into 50 ohms	4.0 V/BW P-P	100 K	FIG. 37

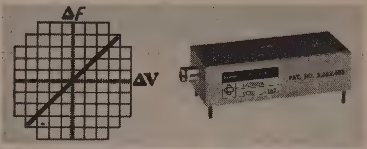
CRYSTALS/OSCILLATORS/CRYSTAL FILTERS

DAMON...*THE FORM FACTOR SPECIALISTS*

VCXO's — 1 KHz to 500 MHz

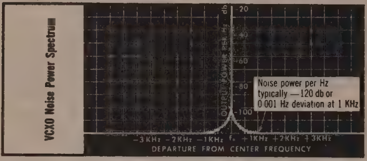
Damon VCXO's provide high stability over a broad range of center frequencies. An optional square wave or pulse output signal compatible with I. C. logic circuits is available.



Center Frequency	1 KHz to 500 MHz
Deviation	.01% to 0.5% of Center Frequency
Linearity	1% to 5% of Peak Deviation
Frequency Stability	determined by Peak Deviation and Operating Temp.
Modulation Rates	DC to 200 KHz

Low Noise VCXO's

Damon low noise miniaturized VCXO's are all solid state quartz crystal stable oscillators whose frequencies can be varied linearly by an external DC or AC modulating signal. Only a source of power and control signal are required . . . no auxiliary compensating circuitry.



TYPICAL CHARACTERISTICS:

Center Frequency	10.000 MHz ±1 KHz
Deviation	±10 KHz
Linearity	±1%
Modulation Rate	Flat to 4 KHz
Output Power	>1 MW

Gaussian Crystal Filters

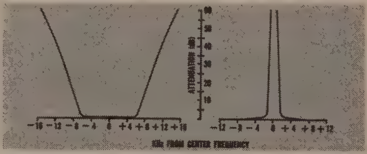
Gaussian Crystal Filters of either conventional or monolithic design. Useful in FM communications or radar systems where flat time delay is required. In a coherent pulsed radar, it can minimize return-pulse overshoot. Eliminates ringing problems in swept spectrum analysis. Available in 2 to 8 pole designs.

DAMON
CRYSTAL FILTER
6272A
334

Center Frequency	
Conventional	10 KHz - 35 MHz
Monolithic	3 - 30 MHz
3 dB Bandwidth	100 Hz - 30 KHz
Shape Factor, 30 dB to 3 dB	3:1 to 7:1
Ringing, Pulse or Impulse	25 - 50 dB down
Phase Linearity	±2%
No. of Poles	
Conventional	2-8
Monolithic	2 - 4
Volume	
Conventional	1 - 6 cu. in.
Monolithic	0.016 - 0.4 cu. in.

Band-Pass/Reject Crystal Filters

A wide variety of conventional crystal filters are produced at Damon. Standards designs such as Butterworth, Chebyshev, Gaussian, Bessel, and Legendre, as well as custom tailored designs are available.

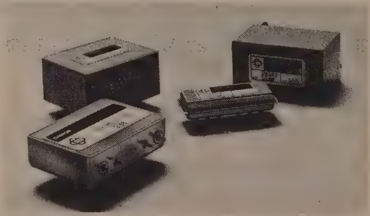


RANGE OF PARAMETERS:

Center Frequency	10 KHz - 75 MHz
Bandwidth	.01% - 3% of C. F.
Shape Factor	down to 1.2:1
Differential Phase Shift	±2°
Group Delay Uniformity	±5%

Surface-Wave Delay Lines

With signal transfer *across* the surface instead of through the body (a state-of-the-art development), the new Surface-Wave concept results in substantially smaller packages, lower cost in production quantities and superior performance over a 20 MHz to 200 MHz range.



RANGE OF PARAMETERS:

Frequency Range	20 MHz - 200 MHz
Time Delay Range	0.5 microsecs. - 10 microsecs.
Bandwidth at —3 dB	3% - 30% of center frequency
Insertion Loss	10 - 20 dB
Spurious Responses	25 - 30 dB below desired response
Environment	Full military temp., shock, vibration available
Typical Size	Less than one cubic inch

Monolithic Crystal Filters

Damon Monolithic Filters utilize a single quartz plate for multiple resonators and the coupling medium between them. Advantages over conventional crystal filters include smaller size, superior stability, and lower cost. Available in a wide variety of computer-assisted designs from Chebyshev to Gaussian characteristics and from 2 to 8 poles.

Center Frequency	2.5 - 30 MHz
3 dB Bandwidth	0.3 - 30 KHz
No. of Coupled Resonators	2-6
Insertion Loss	1 - 6 dB
Ripple	0.5 dB max
Terminations	50 ohms to 20 kilohms
Size	TO-5, TO-8, or Flat-Pack

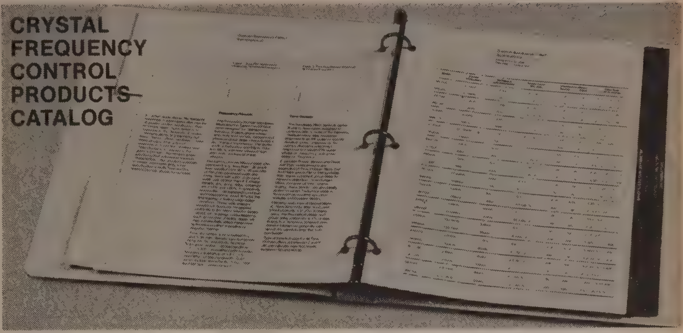
Attention RF Systems Engineers

A new catalog available from Damon provides applications information, design considerations and detailed tables showing design capabilities, parameter ranges and trade-off relationships for crystal filters and discriminators. Additional information on VCXO's and delay lines is also provided.

Yours Free. Simply photocopy and fill out the questionnaire below and send to Damon/ Electronics Division.



Gentlemen,

I have occasion to use or specify crystal frequency control devices. Please send your Crystal Filter and VCXO Catalogs. Add my name to your mailing list for information on future product developments.

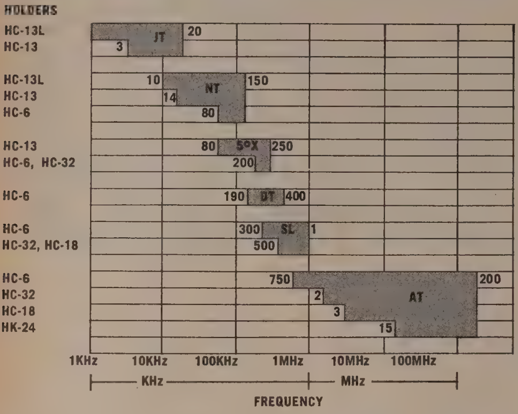
QUARTZ CRYSTALS

MAJOR CRYSTAL TYPES—FREQUENCY vs. HOLDERS



Erie Frequency Control manufactures crystal cuts capable of handling the entire frequency spectrum from 1 KHz to 200 MHz. The chart above shows the type cut, and the holder into which the crystal can be placed. Specifications for crystals vary widely with regard to the equipment in which they are being used. Erie manufactures to Military CR types and is qualified on the QPL list for some frequencies. It also manufactures crystals specifically to the customer's own specifications. Erie welcomes the opportunity to quote on any type of crystal in solder seal or cold weld holders.

JT CRYSTALS

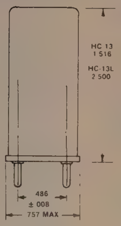
PERFORMANCE SUMMARY

General — A length thickness flexure type crystal, manufactured by Duplexing two 5° x cut crystals into one bar.

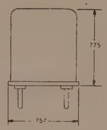
Frequency Range	400 Hz - 3 KHz	3 KHz - 20 KHz
Holder Type	HC 13 Long	HC 13/U
Height	2½″	1½″
Seal	Solder	Solder
Type Coldweld	Not Available	CW 13

Nominal Frequency Tolerance	±.015% −40°C to +70°C
Best Frequency Tolerance	±.010% −40°C to +70°C
Zero Temperature Coefficient	25°C
Resistance	See graph
Q Range	25000
Aging	≤ 1 x 10⁶/day initial and ≤ 2 x 10⁷/day after 3 months.

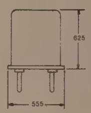
CRYSTAL HOLDERS



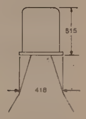
HC-13
1 KHz - 250 KHz
PIN DIA. .050
SPACING .486
THICKNESS .350



HC-6
80 KHz - 200 MHz
PIN DIA. .050
SPACING .486
THICKNESS .350



HC-32
200 KHz - 1 MHz
2 MHz - 200 MHz
PIN DIA. .040
THICKNESS .225
SPACING .275



Variations in lead length, diameter, ground pins and mounting available in all holder sizes upon request.

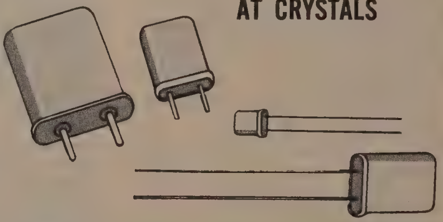
HC-25/HC-18
500 KHz - 1 MHz
3 MHz - 200 MHz
LEAD DIA. .017
SPACING .192
THICKNESS .166

HK-24
15 MHz - 200 MHz
LEAD DIA. .015
SPACING .080
THICKNESS .124

PERFORMANCE SUMMARY

General — A Thickness — shear type crystal, manufactured by controlled lapping of miniature substrates to exact thickness dimensions.

AT CRYSTALS



Frequency Range	750 KHz	2 MHz	3 MHz	15 MHz
	200 MHz	200 MHz	200 MHz	200 MHz
Holder Type			HC-18	
	HC-6	HC-32	HC-25	HK-24
Height	.775″	.625″	.515″	.250″
Seal	Solder	Solder	Solder	Solder
Type Coldweld			HC-25C.W.	
	HC-6C.W.	N/A	HC-18C.W.	N/A

Nominal Frequency Tolerance	±.005% from −55°C to +105°C
Best Frequency Tolerance	±.0025% from −55°C to +105°C ±.0005% from − 5°C to + 60°C
Zero Temperature Coefficient	Per customer spec between +25°C and +100°C
Q Range	50 K to 500 K (function of frequency range)
Aging	≤ 2 x 10⁻⁸/day initial ≤ 5 x 10⁻⁹/day after 3 months

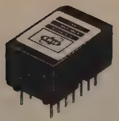
CRYSTAL OSCILLATORS

STANDARD AND CUSTOM DESIGNS

TTL DIP PACKAGE CRYSTAL OSCILLATORS

New low cost Oscillator for computers, data communications and timing circuitry.



20A01111

Frequency Range: 4 to 20 MHz

Size: .375″ H. x .78″ L. x .49″ W.

Stability: ±0.01

Input Voltage: +5 Vdc

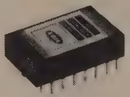
Power: 15 ma

Output: TTL Comp.

Temp. Range: 0°C to 60°C

Source Max. Impedance: 10 ± j 10Ω

TTL DIP PACKAGE CRYSTAL OSCILLATORS WITH HERMETICALLY SEALED CRYSTAL



20A01046

Size: .20″ H. x .78″ L. x .49″ W.

Frequency: 15 MHz to 25 MHz

Input Voltage: +5 Vdc ±5%

Wave Form: Square
RT & FT ≤ 7.5 NS
0 State .4 ma max. @ 20 ma Sink
1 State 2.4 V min. @ −500 μa Source

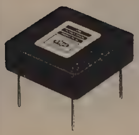
Stability: ±25 PPM over Temperature Range

Setting Accuracy: ±100 PPM @ 25°C ±3°C

Temperature Range: 0°C to 70°C

CMOS COMPATIBLE CRYSTAL OSCILLATORS

For time reference, computer clock, marker generator and transceivers.



20A01089

Size: .312″ H. x 1.0″ L. x 1.0″ W.

Frequency: .01 Hz to 5 MHz

Input Voltage: 3 to 15 Vdc

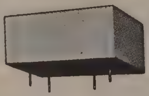
Input Cur.: @ 6 Vdc & freq. @ 3 MHz—1 ma max.

Output: CMOS Compatible

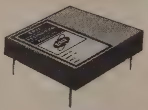
Stability vs. Temperature:
±25 ppm — 0°C to +70°C
±50 ppm — −55°C to +125°C
±5 ppm — 0°C to +50°C

Setting Accuracy: ±100 ppm @ 25°C
For frequencies below 3.00 MHz, the package increases 1.5″ sq. x .40″ H.

LOW COST TTL CRYSTAL OSCILLATORS



20A0183



20A01084

Frequency Range: 3 MHz to 15 MHz

Input Voltage: +5 Vdc ±5%

Input Current: 20 ma max.

Setting Tolerance: ±20 PPM

Frequency vs. Temp.: ±50 PPM over 0°C to 70°C

Frequency vs. VCC: ≤ ±1 PPM / ±5%

Frequency vs. RL: ≤ ±1 PPM / ±10%

Aging:
±10 PPM first 30 days / ±5 PPM/yr. thereafter

Wave Form: TTL compatible logic "1" 2.4 V min. "0" .4 V max.

Symmetry: 50/50 ±10%

Rise & Fall Time: 20 Nanosec. max.

Fanout: 10 7400/5400 Series

Material: Diallyl phthalate glass filled

- **True F-M**
- **Supply Regulation**
- **Oscillator Buffering**
- **Linearization**
- **Small Size**
- **Low Cost**
- **Aging Adjust.**

20V01021 VCXO

Frequency: 40 KHz to 80 MHz

Power: +12 Vdc @ 20 ma max.

Output: 1 mw or logic

Stability:
±0.005% 0°C to +50°C

Deviation: ±0.05%

FM Linearity: 3% max.

Response: ±3 db DC to
20 KHz 0 db ref. @ 1 KHz

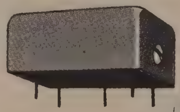
- **Low Power**
- **High Stability**
- **Small Size**
- **Low Cost**
- **Voltage Control Option**
- **Machined Aluminum Cavity**

Frequency: 1 MHz to 10 MHz

Stability:
±5 x 10^{-9}/24 hours
±1 x 10^{-8} 0 to 70°C

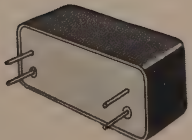
Power: +12 Vdc @ 3 Watts max.
@ 0°C

Size: 1.5″ x 1.5″ x 3″ Long



20B01020

CRYSTAL FILTERS



Erie offers a complete line of crystal Bandpass and Reject Filters. Modern computerized designs are available to synthesize any of the following types: Butterworth, Chebyshev Elliptic Function, Bessel Function and Gaussian. 1-10 pole designs are standard with higher order types available. Comb set, multiple channel or BW and matched sets are also readily available. Units are rugged, compact and most can be designed to meet the environmental requirements of Mil-F-18327.

Center Frequency:
1 KHz to 50 MHz

Bandwidth:
.005% to 10%

Shape Factor:
As steep as 1/1.4
(6 db/60 db)

Ripple:
Generally less than 0.5 db

Insertion Loss:
Usually less than 3.0 db

Ultimate Attenuation:
100 db Max.

Max. Operating Temperature:
−55°C to +125°C

Erie manufactures a long line of high stability, high reliability frequency sources utilized in military and space work and other high technology areas. As these units are custom, we welcome your inquiries and specifications.

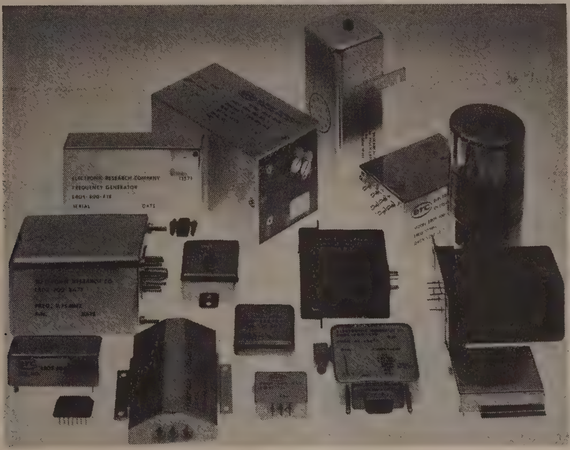
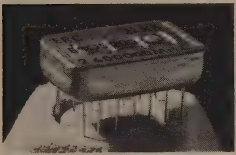
erc Crystal Oscillators, Crystals, Filters



Crystal Oscillators — 1 Hz to 300 MHz

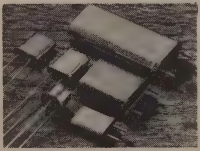
Wide variety of crystal oscillators manufactured by ERC includes TCXO's, VCXO's, TCVCXO's, Precision Standards and Hybrid Oscillators. TCXO's are available with frequency stability vs. temperature of ±0.5 PPM over an ambient temperature range of −30°C to +70°C. Crystal oscillators utilizing DC proportional controlled ovens are available with aging as low as 5 x 10^{-10}/day. Discuss your special requirements such as phase noise, output parameters, power, size, and applicable mil. specs with our engineers.



Hybrid Crystal Oscillators
In .200″ High Dip Packages

Standard Features:

- FREQUENCY: 30 KHz to 25 MHz
- OPERATING TEMPERATURE RANGE: −55°C to +125°C
- PACKAGE SIZE: 14 Pin DIP, .500″ (12.7 mm) X .800″ (20.3 mm) X .200″ (5.1 mm)
- SQUARE WAVE OUTPUT: Compatible with 10 T^2L loads
  - "0" = +0.4 Vdc maximum (+0.2 Vdc typical)
  - "1" = +2.4 Vdc minimum (+3 Vdc typical)
- HERMETICALLY SEALED: Permits use in harsh, high-humidity environments
- STANDARD PIN CONNECTIONS: As a 5400 Series Gate
- CAN BE TESTED TO MIL-STD-883



Crystals, Coldweld — Metal Can

Complete frequency range from 2 KHz to 200 MHz with QPL approval on Military crystals to Mil-C-3098F. Precision coldweld crystals are available for applications needing superior long term aging, maximum reliability and crystal Q. Improved process techniques provide for production of tight tolerance temperature crystals for use in Temperature Compensated Crystal Oscillators.

Filters — Complete Design Capability

Crystal Filters: 2 KHz to 100 MHz; Bandpass, Sideband, Rejection, Linear Phase, Discriminators.

OSCILLATORS

CRYSTALS AND TUNING FORKS

Fork Standards oscillators are either crystal or tuning fork stabilized depending upon the frequency and accuracy desired.

Oscillators such as Model S have been designed and manufactured to meet applicable military specifications MIL-E-5400 and MIL-E-16400. Most other models can be supplied to meet the same or similar specifications. Our inspection system is based upon MIL-I-45208A.

Consult us for special design and application aid. Our oscillators are available with a variety of frequency, stability, output, supply voltage and package combinations.

Model	Accuracy/ Temp. Limits	Sine Wave Output Frequency Range	Waveform Options	Square Wave Output Frequency Range	Waveform Options	Supply VDC	Wt. Oz.
G (tuning fork)	2A-3J	25-15000Hz	AA, AC, AT, DT	Below 1-15000Hz	B, BL, BN	5 or 12	4-7
GQ (crystal)	4A-8C	25Hz-40MHz	AA, AC, AT, DT	Below 1Hz-20MHz	BL, BN	5 or 12	4-7
UQ (crystal)	4A-8C	3000Hz-40MHz	AA	Below 1Hz-20MHz	BL, BN	5 to 15	1.75
BQ (crystal)	4A-8C	25Hz-40MHz	AA, AC, AT, DT	Below 1Hz-20MHz	BL, BN	5 to 15	3
FO (tuning fork)	2A-3J	1000-15000Hz	AA	.001-250Hz .6″h	B, BL, BN	5 or 12	1.5

FSI/FORK STANDARDS, INC. / 211 MAIN STREET, WEST CHICAGO, ILLINOIS 60185 / (312) 231-3511

FSI/Fork Standard Inc.

PRECISE FREQUENCY SOURCES FOR YOUR EVERY APPLICATION

SPECIFYING FSI OSCILLATORS

FSI specification numbers completely describe the oscillator. This number is made up of a code designating model, accuracy / temperature class, output waveform and supply, respectively. These codes are obtained through selections from the following charts and tabulations.

STANDARD OUTPUT WAVEFORMS OPTIONS

SQUARE WAVE:

B: Output amplitude ⅔ supply voltage, minimum, 10K ohms load.

BN: Output amplitude ⅔ supply voltage, minimum, 50/50 symmetry; CMOS compatible.

BL: Five volt logic; TTL compatible, fan-out of 10.

Complementary and multiple outputs of all the above are available.

SINE WAVE:

AA: RMS voltage output ¼ supply, minimum, into 10K ohms resistive load. Harmonic distortion 1 to 10%, depending on customer requirements.

AC: Like AA except capacitor isolated output.

AT: Like AA except transformer isolated output.

DT: Output 1 mW into 600 ohms, transformer isolated.

ACCURACY/TEMPERATURE CLASS

Accuracy %	+15°C to +35°C	0°C to +65°C	−25°C to +65°C	−40°C to +65°C	−55°C to +85°C
.1	2A	2C	2F	3N	3J
.05	3A	3C	3F	4N	5J
.01	4A	4C	4F	5N	6J
.005	5A	5C	5F	6N	7J
.0025	6A	6C	6F	7N	*
.001	7A	7C	7F	8N	*
.0005	8A	8C	8F	9N	*
.0001	9A	9C	9F	10N	*
.00001	10A	10C	*	*	*

*Special oven unit. Consult factory. ☐ Tuning fork oscillator.
▨ Crystal oscillator. ▩ Ovenized crystal oscillator.

ORDERING

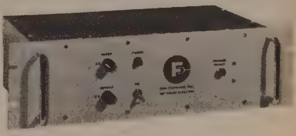
Use the following code scheme to specify FSI oscillators.

EXAMPLE:

G - 3C - 4K - BL - 5

5 = 5 VDC Power Supply
BL = TTL Compatible Drive, Output
4K = 4 kHz Output Frequency
3C = .05% Accuracy, 0-65°C Temperature Range
G = Model G Case

POWER INVERTERS



RMLA-75

FSI manufactures a line of power inverters that provide a stable source of alternating current suitable for driving chart or stepper motors. Frequency sources are available with accuracies of from .1% to .005% and temperature ranges from room to 0°C to 65°C depending upon choice of oscillator. Power capability is from 2 VA to 75 VA dependent on inverter requirements. Input power may be obtained from batteries or unstabilized 60 Hz, 115 to 130 line. Contact the factory for additional information regarding your particular application.

TONE ENCODERS FOR DUAL-TONE MULTIFREQUENCY (DTMF) APPLICATIONS

Model 510, 511, 520 Encoders

Model 510 Touch Tone* Encoder is a complete T²L Compatible Dual Touch Tone* Encoder in a 2.4 cu. in. low profile (.4″) module. It features self contained decode logic to select the frequencies of its two low distortion oscillators and output gating logic to gate either or both of the oscillators outputs.

Specifications include: Low distortion outputs (< 1%) — Touch Tone* frequencies (±1%) (Osc. 1 — 697Hz, 770Hz, 852Hz, 941Hz: Osc. 2 — 1209Hz, 1334Hz, 1446Hz, 1633Hz). Gating isolation > 60dB — Low impedance output (10Ω).

Other models with Trunk Tone frequencies or customer specified frequencies are also available.

Tone decoder modules featuring two pole pair bandpass filters and level detection circuitry with T²L compatible logic outputs are available.

Model 511 Tone Encoder, a complete TTL Compatible Dual Tone Encoder offering a signal amplitude of high tones 3dB greater than that of low tones.

Model 520 Tone Encoder, a complete, low-cost TTL compatible tone encoder for use with external switching and touch pads.

APPLICATIONS

- CONSUMER CREDIT
- TRAVEL & ENTERTAINMENT
- MANUFACTURING FACILITIES
- TRANSPORTATION SYSTEMS
- FACSIMILE TRANSMISSION
- DATA COLLECTION
- UTILITY CONTROL

TONE DECODERS FOR DUAL-TONE MULTIFREQUENCY (DTMF) APPLICATIONS

Model 550-1 (Low Frequency) & Model 550-2 (High Frequency) Tone Detector Modules

The Model 550-1 and 550-2 Tone Detector modules are a complete, easy to use, adjustment free, high performance tone decoding system. They detect and decode standard Bell System Touch Tone* with relative amplitudes of ±10dB and absolute amplitude in the range from —30dBm to 0dBm. Detection and hold times have been designed to achieve non-ambiguous decoding of 40 ms on and 40 ms off tone bursts. Outputs may be interfaced with CMOS and T²L logic.

Model 540 Band Separation Filter

The Model #540 Band Separation Filter attenuates the dial tone frequencies (by > 30dB) and the out of band portions of the voice spectrum. It also separates the high and low tone bands.

SINEWAVE OSCILLATORS LOW COST—HIGH PERFORMANCE—LOW DISTORTION

Fixed Frequency Models 400 — Tuneable Models 440

Modular fixed frequency and tuneable oscillators featuring low distortion quadrature (90° ±.1°) buffered outputs with amplitude tracking to better than 100 ppm/°C. Fixed frequency models available from 1Hz to 20KHz (externally adjustable ±10%) and Tuneable models externally variable over 1000:1 range.

Low frequency drift (0.01%/°C) — Low Noise (−85dB). Amplitude externally adjustable over 20dB range (with resistor or voltage).

An amplitude control module to maintain 100 ppm amplitude accuracy and stability is also available.

Model 450

The 450 Series features 0.1dB amplitude stability, 0.1% distortion, 1 to 20V p-p adjustable, 100Hz to 10KHz range, 1% accuracy (adj. ±5%) and .02%/°C stability.

Frequency Devices INC.

FREQUENCY DEVICES INC. ALSO CARRIES A BROAD LINE OF ACTIVE FIXED FREQUENCY, TUNEABLE AND PROGRAMMABLE FILTERS.

MICRO-MINIATURIZED MIC PRODUCTS

Specification Guide

One-call service from Tek-wave, the largest micro-miniaturized product manufacturer producing connectors and circuit frames for hermetic and non-hermetic applications, as well as devices, hardware, substrates and circuits.

CALL OUR CUSTOMER SERVICE HOTLINE

1. Describe your product or component needs
2. Tell us your application and requirements
3. We'll match your needs, offer assistance and quote immediately

(516) 328-0100

FOR IMMEDIATE RESPONSE, COMPETITIVE PRICES, FAST SHIPMENT

CIRCUIT FRAMES

FOR HERMETIC AND NON-HERMETIC APPLICATIONS

- Standard and custom configurations
- All materials: aluminum, brass, copper, Kovar, etc.
- Compliance with applicable MIL SPECS
- Sizes from ½″ x ½″ to 6″ x 10″; 1 to 6 ports
- High reliability, low VSWR, excellent electrical performance
- Variety of sealing methods available
- Connectors and all hardware included
- Full line of hermetic circuit modules

LAUNCHERS, TRANSITIONS AND CONNECTORS

FOR HERMETIC AND NON-HERMETIC APPLICATIONS

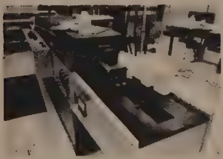
- All sizes and configurations: 3 and 7mm/SMA, 14mm
- Standard and custom designs
- Lots of different mounting methods offered
- High reliability, low VSWR, excellent electrical performance
- Many metals and finishes available
- Impedance, GPS, frequency ranges, etc. matched to your needs

METALLIZED SUBSTRATES AND CIRCUITS

- All materials including ceramics, alumina, BeO and glass
- Any size or shape—up to 4″ x 4″
- Any combination chrome-copper-gold metallization; both sides and edges metallized
- Close tolerances—±.001 on thickness and camber standard

RESISTIVE PRODUCTS

- Sizes from .025″ W x .050″ L x .010″ T to .100″ W x .200″ L x .025″ T
- Resistive values from 5 ohms to 250 ohms
- Terminations and attenuators offered to our specs or yours



CUSTOM METALLIZING CAPABILITIES

- Metallizing and circuits on BeO, AL_2O_3, glass and ceramics
- Microcircuit and macro screen printing for special applications
- New development applications for beryllium oxide
- Prototyping and short production of solid state device packages

ORDERING INFORMATION

FEDERAL SUPPLY CODE NO. 16681
DUNS NO. 300-3290

ORDERING INFORMATION REQUIRED:

1. Model number.
2. Output frequency desired (or range, etc.).
3. Quantity required.
4. Any special modifications desired.

PRICES:

EVERY PAGE LISTS PRICES. We make every effort to keep prices as accurate as possible. However, we reserve the right to change prices without written notice.

Prices for "production quantities" vary from 30% to 80% discount for a few hundred units (depending on quantity, model and frequency). We would be happy to submit quotations at any time.

PRICES— OVERSEAS SHIPMENTS:

Prices are shown in U.S. dollars and may be higher for all overseas purchases.

TERMS:

Net-30 days. F.O.B. Mechanicsburg, Pa.

WARRANTY:

We guarantee all OSCILLATORS we manufacture to be free of any defects and to operate within specifications for one year from date of shipment. If an OSCILLATOR should become defective within this period and has not been subject to misuse, it will be repaired free of charge. Opening an OSCILLATOR case, of course, voids this warranty.

MILITARY SPECIFICATIONS:

Components used in practically all OSCILLATORS in this catalog are of the Military approved type and the construction of the OSCILLATORS is based on General Military Specifications.

QUALITY CONTROL:

We have a fully implemented Quality Control system as a separate department and our system includes complete compliance to and exceeding MIL-I-45208A (Inspection system requirements) and MIL-C-45662 (Calibration system requirements).

LIABILITY:

GREENRAY INDUSTRIES, INC. assumes no responsibility for consequential damages of any nature and the customer by his acceptance of equipment or components thereof, or parts thereof, assumes all liability for its use or misuse.

GENERAL INFORMATION ON OSCILLATORS

HARMONICS

Products of the output frequency. Unless otherwise stated all harmonics of the output frequency will be −20 dB minimum.

SUB-HARMONICS

Products due to the multiplication of the basic OSCILLATOR frequency. Unless otherwise stated all sub-harmonics of the output frequency will be −20 dB minimum.

SPURIOUS

Unrelated frequencies present at the output. Unless otherwise stated all spurious will be −40 dB minimum.

AGING

As an OSCILLATOR operates, its components will "settle in" and the frequency generally drifts high with time. Most major aging or frequency drift will occur during the first month of operation of any OSCILLATOR.

LONG TERM AGING specifications, (unless otherwise noted), will be met after a 24 hour stabilization period. (MIL-C-3098E, Paragraph 4.7.14).

FREQUENCY DEVIATION vs. FREQUENCY OUTPUT CHART

	1 x 10^{-10}	1 x 10^{-9}	.01 PPM 1 x 10^{-8} .000001%	.1 PPM 1 x 10^{-7} .00001%	1 PPM 1 x 10^{-6} .0001%	5 PPM 5 x 10^{-6} .0005%	10 PPM 1 x 10^{-5} .001%	100 PPM 1 x 10^{-4} .01%	1000 PPM 1 x 10^{-3} .1%	10,000 PPM 1 x 10^{-2} 1%
1 kHz			.00001 Hz	.0001 Hz	.001 Hz	.005 Hz	.01 Hz	.1 Hz	1 Hz	10 Hz
500 kHz			.005 Hz	.05 Hz	.5 Hz	2.5 Hz	5 Hz	50 Hz	500 Hz	5 kHz
1 MHz			.01 Hz	.1 Hz	1 Hz	5 Hz	10 Hz	100 Hz	1 kHz	10 kHz
10 MHz		.01 Hz	.1 Hz	1 Hz	10 Hz	50 Hz	100 Hz	1 kHz	10 kHz	100 kHz

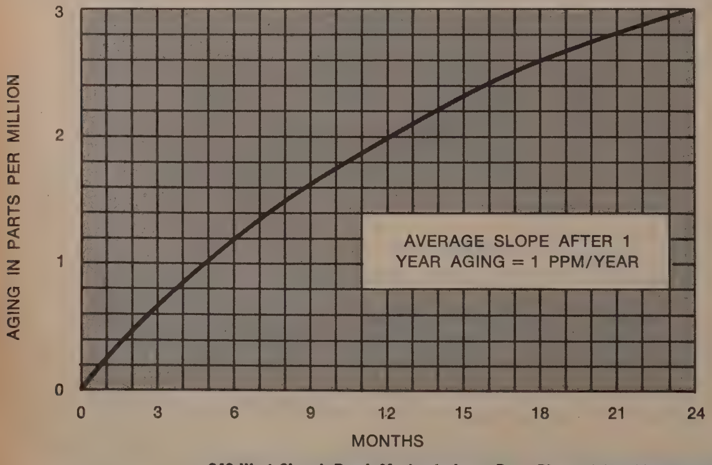
100 MHz	.01 Hz	.1 Hz	1 Hz	10 Hz	100 Hz	500 Hz	1 kHz	10 kHz	100 kHz	1 MHz
500 MHz	.05 Hz	.5 Hz	5 Hz	50 Hz	500 Hz	2500 Hz	5 kHz	50 kHz	500 kHz	5 MHz
1 GHz	.1 Hz	1 Hz	10 Hz	100 Hz	1000 Hz	5 kHz	10 kHz	100 kHz	1 MHz	10 MHz

EXAMPLE: (from the chart above)
An oscillator which holds ±1 x 10^{-7} frequency stability at 1 MHz will hold ±.1 Hz.

AGING CHART
CRYSTAL CONTROLLED SOURCES

TYPICAL CRYSTAL DRIFT vs. TIME IN MONTHS WITH TEMPERATURE HELD CONSTANT



The chart at left shows typical aging characteristics which can be expected for crystal controlled frequency sources manufactured by Greenray Industries, Inc. after one week's prior aging.

Please note that the chart should be used for estimating aging rate only, and does not represent a warranty on the part of Greenray Industries, Inc.

In cases where there is a maximum aging specification, this requirement should be designated. (Oscillators can be provided with aging rates of less than 1 PPM per year on special order.)

Greenray Industries, Inc.

SHORT TERM STABILITY

Short term frequency stability can be measured in two domains, Time or Frequency. The frequency domain is measured by spectrum analysis and time domain is measured by gated frequency counter techniques. At Greenray Industries both measurement techniques are used; as shown below.

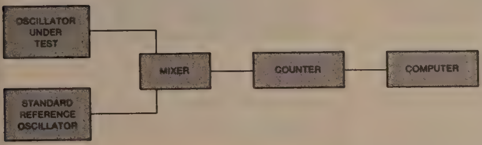
The way in which short term stability is specified is often confusing to both the customer and the vendor. In an effort to reduce this confusion Greenray Industries suggests the following methods to specify short term stability.

1. TIME DOMAIN: Specify $\frac{\Delta f}{f}$ in powers of 10 per time.

   For example: ±2.5 x 10^{9} per 100 milliseconds.
2. FREQUENCY DOMAIN: Specify single sideband spectral density of phase fluctuations at specific fourier frequencies in a particular bandwidth.

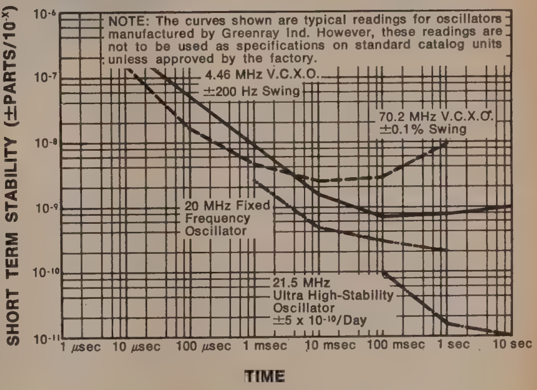
   For example: In a 1 Hz bandwidth, single sideband phase spectral density relative to the carrier is −116 db at 100 Hz from the carrier. (also see Page 1•346)

BLOCK DIAGRAM FOR TIME DOMAIN MEASUREMENTS



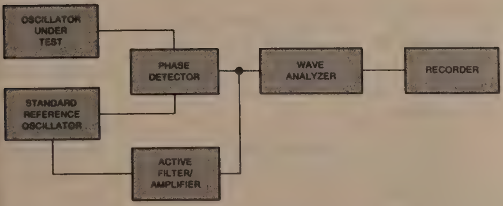
From the above test set-up we obtain the required data to compute the $\frac{\Delta f}{f}$ in the required time period.

SHORT TERM STABILITY IN THE TIME DOMAIN



NOTE: The curves shown are typical readings for oscillators manufactured by Greenray Ind. However, these readings are not to be used as specifications on standard catalog units unless approved by the factory.

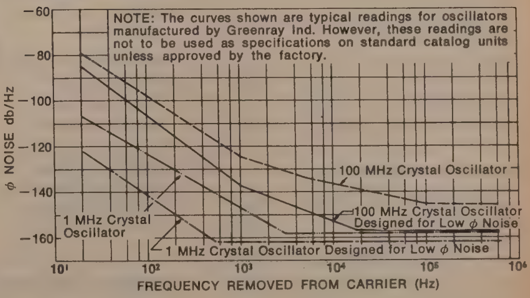
BLOCK DIAGRAM FOR FREQUENCY DOMAIN MEASUREMENTS



From the above test set-up we obtain the required data to compute the single sideband phase spectral density relative to the carrier at a particular frequency from the carrier in the desired bandwidth.

TYPICAL SINGLE SIDE-BAND PHASE SPECTRAL DENSITY MEASURED RELATIVE TO THE CARRIER IN A 1 Hz BANDWIDTH

FIXED FREQUENCY CRYSTAL OSCILLATORS

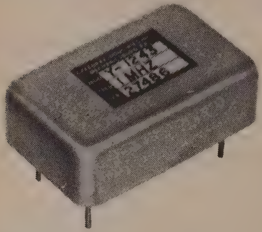


NOTE: The curves shown are typical readings for oscillators manufactured by Greenray Ind. However, these readings are not to be used as specifications on standard catalog units unless approved by the factory.

Greenray Industries, Inc.

CRYSTAL OSCILLATORS

100 KHz to 20 MHz SINE or SQUARE WAVE MODEL Y-1243 & Y-1245 LOW COST



SPECIFICATIONS:

Frequency Range: 100 kHz to 20 MHz

Frequency Stability Over Temperature Range: ±.02% (100 kHz to 800 kHz)
±.01% (800.1 kHz to 20 MHz)

Temperature Range:
0°C to +70°C (Model Y-1243)
−40°C to +85°C (Model Y-1245)

Output:
Square wave version: 50/50 ±20% to drive ≤10 TTL loads. 0 ±.4V to +2.4V min.
Sine wave version: .23V RMS sine wave into a 50 ohm load (Harmonic Distortion: less than 20%)
ECL version: Requires −5.2V DC ±1% input voltage. Output waveform and levels will drive ≤5 standard ECL gates.

Input Voltage:
+5V DC ±.25V (Model Y-1243)
+5V DC ±.5V (Model Y-1245)

Input Current: 60 ma. maximum

Size: 2.02 x 1.0 x .53″ (L-W-H)
51.3 x 25.4 x 13.5 mm

Printed Circuit Board Mounting

Hermetically Sealed

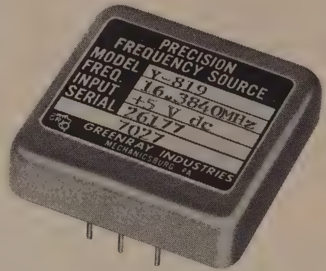
Designed for Low Cost, High Volume Production Requirements

FREQUENCY RANGE	PRICE: 1-3 units Y-1243	Y-1245
100 kHz to 800 kHz	$87.00 ea.	$97.00 ea.
800.1 kHz to 20 MHz	79.00 ea.	89.00 ea.

ORDERING INFORMATION:

1. Specify exact frequency desired.
2. Specify Model Y-1243 or Y-1245 for sine wave output.
3. Specify Model Y-1243Q or Y-1245Q for TTL output (same price).
4. Specify Model Y-1243U or Y-1245U for ECL output (same price).

1 Hz to 100 MHz SQUARE WAVE MODEL Y-819



SPECIFICATIONS:

Frequency Range: 1 Hz to 100 MHz

Frequency Stability Over Temperature Range: ±.005%

Temperature Range: 0°C to +70°C

Output Voltage: 0 ±.4V to +2.4V min.

Output: Square wave 50/50 ±10% to drive ≤10 TTL loads

Input Voltage: +5V DC ±.25V

Input Current: 350 ma. maximum

Size:
2x2x.5″, 50.8x50.8x12.7 mm (L-W-H) (frequencies above 70 kHz)
2.56x2.94x.5″, 65.02x74.68x12.7 mm (L-W-H) (frequencies below 69.9 kHz)

Hermetically Sealed

Mounting:
3 PC Pins and 2 (6-32) threaded studs

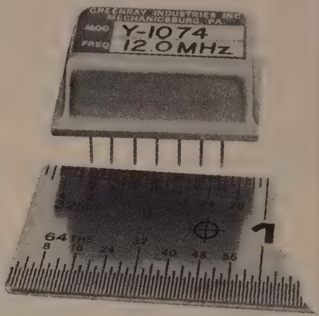
Designed for Low Cost Commercial Applications

FREQUENCY RANGE	PRICE: 1-3 units
1 Hz to 19.9 Hz	$249.00 each
20 Hz to 299 Hz	219.00 each
300 Hz to 4.49 kHz	186.00 each
4.5 kHz to 69.9 kHz	153.00 each
70 kHz to 999 kHz	120.00 each
1.0 MHz to 19.99 MHz	87.00 each
20.0 MHz to 50 MHz	120.00 each
50.1 MHz to 100 MHz	153.00 each

ORDERING INFORMATION:

Specify Model Y-819 and exact output frequency desired.

5 MHz to 25 MHz SQUARE WAVE MODEL Y-1054 & Y-1074 DUAL-IN-LINE MOUNTING



SPECIFICATIONS:

Frequency Range: 5 MHz to 25 MHz

Frequency Stability Over Temperature Range: ±.005% 0°C to +70°C
±.01% −55°C to +125°C

Temperature Ranges:
0°C to +70°C (Model Y-1074)
−55°C to +125°C (Model Y-1054)

Output: Square wave 50/50 ±20% to drive ≤10 TTL loads

Output Voltage: 0 ±.4V to +2.4V min.

Input Voltage: +5V DC ±.25V (Y-1074)
+5V DC ±.50V (Y-1054)

Input Current: 70 ma. maximum

Size: .90 x .56 x .35″ (L-W-H)
22.86 x 14.22 x 8.89 mm (L-W-H)

Plugs into Standard 14 Pin Dual-In-Line Socket

Hermetically Sealed Metal Can (for maximum shielding)

	PRICE: 1-3 units
Model Y-1054	$120.00 each
Model Y-1074	87.00 each

ORDERING INFORMATION:

1. Specify Model Y-1074 for operation over 0°C to +70°C.
2. Specify Model Y-1054 for operation over −55°C to +125°C.
3. Specify exact output frequency desired.

CRYSTAL OSCILLATORS

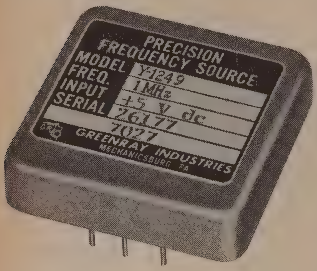
100 KHz to 2.5 MHz PULSE OUTPUT

MODEL Y-1249 & Y-1250



SPECIFICATIONS:

Frequency Range: 100 kHz to 2.5 MHz

Frequency Stability Over Temperature Range: ±.02% (100 kHz to 800 kHz)
±.01% (800 kHz to 2.5 MHz)

Temperature Ranges:
0°C to +70°C (Model Y-1249)
−40°C to +85°C (Model Y-1250)

Output Voltage: 0 ±.4V to +2.4V min.

Output:
Square wave to drive ≤10 TTL loads

Pulse Characteristics: (Factory set)
Positive pulse width, 40 nsec. minimum, 9 μsec maximum
Set tolerance of pulse width: ±10%

Duty Cycle Limits: 10/90% to 90/10%

Pulse Width Stability: ±.02%/°C

Input Voltage:
+5V DC ±.25V (Model Y-1249)
+5V DC ±.5V (Model Y-1250)

Input Current: 110 ma. maximum

Size: 2.0 x 2.0 x .53″ (L-W-H)
50.8 x 50.8 x 13.46 mm

PC Board Mounting

Hermetically Sealed

FREQUENCY RANGE:	**PRICE: 1-3 units** **Y-1249**	**Y-1250**

2 x 2 x .75″
50.80 x 50.80 x 19.05 mm (L-W-H)

FREQUENCY RANGE:	**PRICE: 1-3 units**
800 Hz to 2.99 kHz	$185.00 each
3.0 kHz to 9.99 kHz	175.00 each
10.0 kHz to 14.99 kHz	155.00 each
15.0 kHz to 44.99 kHz	145.00 each
45.0 to 99.99 kHz	125.00 each
100.0 kHz to 999.9 kHz	119.00 each
1.00 MHz to 20.0 MHz	119.00 each
20.1 MHz to 50.0 MHz	125.00 each
50.1 MHz to 75.0 MHz	129.00 each
75.1 MHz to 100.0 MHz	139.00 each
100.1 MHz to 150 MHz	175.00 each

ORDERING INFORMATION:

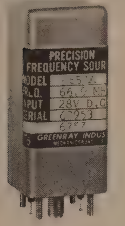
1. Specify Model Y-367 and exact output frequency desired.
2. If 50 ohm output at 1 mw minimum is desired, (below 50 MHz), add the letter "L" after the Model Number and $20 to the price. (Example: Model Y-367L.)
3. If alternate case style is desired add G66 to Model Number. Same price as standard Model Y-367.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

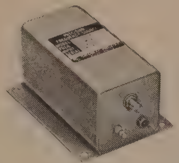
Greenray Industries, Inc.

CRYSTAL OSCILLATORS

12 MHz to 600 MHz SINE WAVE MODEL Y-657A



MODEL Y-657A



MODEL Y-657G6

SPECIFICATIONS:

Frequency Range: 12 MHz to 600 MHz

Frequency Stability Over Temperature Range: ±.005% (for higher stability see Model T-316, Page 1•338)

Temperature Range: −40°C to +70°C

Output: 1 mw minimum into a 50 ohm load (10 mw or 20 mw available)

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB min.

Input Voltage: +28V DC ±2%

Input Current: 75 ma. maximum

Sizes: 1.5 x 1.5 x 3.75″ (W-L-H)
(See Note) (Y-657A)
2.3 x 3.75 x 1.6″ (W-L-H)
(See Note) (Y-657G6)

Flange or Stud Mounting

Connector: SMA, Filtercon for +28V DC

Solder Sealed

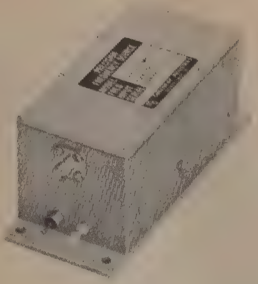
FREQUENCY RANGE	PRICE: 1-3 units
12 MHz to 20 MHz	$153.00 each
20.1 MHz to 50 MHz	159.00 each
50.1 MHz to 75 MHz	164.00 each
75.1 MHz to 100 MHz	175.00 each
100.1 MHz to 150 MHz	215.00 each
150.1 MHz to 300 MHz	286.00 each
300.1 MHz to 600 MHz	413.00 each

ORDERING INFORMATION:

1. Specify exact output frequency desired.
2. Specify Model Y-657A for stud mounting or Model Y-657G6 for flange mounting.
3. For all harmonics and sub-harmonics −40 dB minimum, add $30.00 to price and an "X" after Model No. (Example: Model Y-657AX).
4. For 10 mw output add "J" after Model No. For 20 mw output add "K" after Model No. (Example: Model Y-657AJ or Y-657AXK.)
   Price: 12 MHz to 150 MHz: Add $40.00 for 10 mw and $80.00 for 20 mw.
   150.1 MHz to 600 MHz: Add $80.00 for 10 mw and $160.00 for 20 mw.

NOTE: Units above 150 MHz will have a
2 x 2 x 4″ (W-L-H) case size. (Y-657A)
3 x 4 x 2.1″ (W-L-H) case size (Y-657G6)

1 MHz to 110 MHz SINE WAVE MODEL YH-980 ULTRA-LOW PHASE NOISE



SPECIFICATIONS:

Frequency Range: 1 MHz to 100 MHz

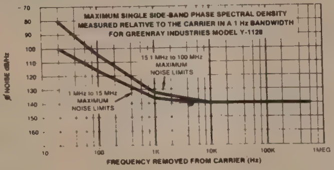
Frequency Stability Over Temperature Range: ±.005%

Temperature Range: 0°C to +50°C

Output Power: 10 milliwatts minimum into a 50 ohm load

Output:
Sine wave, Harmonics −40 dB min.

Phase Spectral Density: Maximum noise levels shown on chart below



Noise Levels Are Typically 6 to 10 db Lower Than Shown Above

Input Voltage: +28V DC ±2%

Input Current: 50 ma. maximum

Size: 4.0 x 2.0 x 2.0″ (L-W-H)
101.6 x 50.8 x 50.8 mm

Mounting:
Flanges, add 1″ to length for flanges

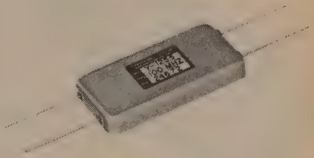
Connector: SMA Filtercon for +28V DC

FREQUENCY RANGE:	PRICE: 1-3 units
1 MHz to 15.0 MHz	$445.00 each
15.1 MHz to 100 MHz	399.00 each

ORDERING INFORMATION:

Specify Model Y-1128 and exact output frequency desired.

10 MHz to 150 MHz SINE WAVE MODEL Y-1255 STRIP-LINE MOUNTING



SPECIFICATIONS:

Frequency Range: 10 MHz to 150 MHz

Frequency Stability Over Temperature Range: ±.003%

Temperature Range: 0°C to +50°C

Output Power:
+5 dBm minimum into a 50 ohm load

Output:
Sine wave, Harmonics −40 dB min.

Input Voltage: +12V DC ±2%

Input Current: 20 ma. maximum

Size: 2.02 x 1.0 x .26″ (L-W-H)
51.3 x 25.4 x 6.6 mm

Strip-line Mounting

Hermetically Sealed

FREQUENCY RANGE:	PRICE: 1-3 units
10 MHz to 20 MHz	$249.00 each
20.1 MHz to 75 MHz	269.00 each
75.1 MHz to 150 MHz	298.00 each

ORDERING INFORMATION:

Specify Model Y-1255 and exact output frequency desired.

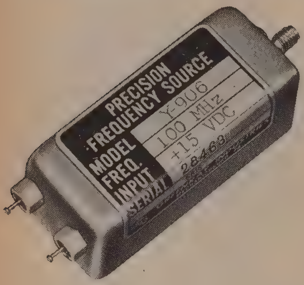
Greenray Industries, Inc.

CRYSTAL OSCILLATORS

4 MHz to 150 MHz SINE WAVE MODEL Y-906 100 MILLIWATTS OUTPUT



SPECIFICATIONS:

Frequency Range: 4 MHz to 150 MHz

Frequency Stability Over Temperature Range: ±.003%

Temperature Range: 0°C to +70°C

Output Power: 100 milliwatts minimum into a 50 ohm load

Output:
Sine wave, Harmonics −20 dB min.

Input Voltage: +15V DC ±2%

Input Current: 125 ma. maximum

Size: 2.38 x 1 x 1″ (L-W-H)
60.45 x 25.4 x 25.4 mm

Mounting: 2 (6-32) threaded studs

Connector: SMA; Filtercons for +15V DC

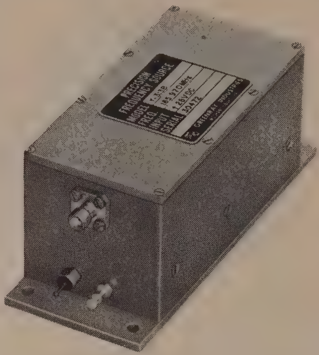
Solder Sealed

FREQUENCY RANGE:	PRICE: 1-3 units
4 MHz to 25 MHz	$274.00 each
25.1 MHz to 90 MHz	299.00 each
90.1 MHz to 150 MHz	328.00 each

ORDERING INFORMATION:

Specify Model Y-906 and exact output frequency desired.

1 MHz to 600 MHz SINE WAVE MODEL Y-313B UP TO 1 WATT OUTPUT



SPECIFICATIONS:

Frequency Range: 1 MHz to 600 MHz

Frequency Stability Over Temperature Range: ±.005%

Temperature Range: 0°C to +50°C

Output Power: Up to 1 (ONE) WATT minimum into a 50 ohm load (see below)

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB minimum

Input Voltage: +28V DC ±2%

Input Current: 175 ma. maximum

Size: 4.0 x 2.0 x 2.0″ (L-W-H)
101.6 x 50.8 x 50.8 mm

Connector: SMA; Filtercons for +28V DC

Mounting Flange: Add 1″ to length for flanges

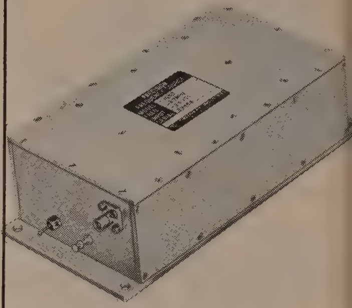
No Additional Heat Sinking Required

FREQ. RANGE (MHz)	MINIMUM OUTPUT POWER	PRICE: 1-3 units
1-30	1 Watt	$345.00 each
30.1-60	800 Milliwatts	390.00 each
60.1-90	600 Milliwatts	445.00 each
90.1-180	400 Milliwatts	525.00 each
180.1-275	200 Milliwatts	575.00 each
275.1-350	100 Milliwatts	655.00 each
350.1-600	50 Milliwatts	695.00 each

ORDERING INFORMATION:

Specify Model Y-313B and exact output frequency desired.

150 MHz to 600 MHz SINE WAVE MODEL Y-1065A UP TO 4 WATTS OUTPUT



SPECIFICATIONS:

Frequency Range: 150 MHz to 600 MHz

Frequency Stability Over Temperature Range: ±.002%

Temperature Range: 0°C to +50°C

Output Power: 1 watt minimum (Model Y-1065A) or 4 watts minimum (Model Y-1065AE) into a 50 ohm load (VSWR 1.5:1 maximum)

Output: Sine wave, Harmonics and Sub-Harmonics −26 dB minimum

Input Voltage: +28V DC ±2%

Input Current:
Model Y-1065A: 400 ma. maximum
Model Y-1065AE: 650 ma. maximum

Connector: SMA; Filtercons for +28V DC

Size: 3.0 x 6.0 x 2.0″ (L-W-H)
76.2 x 152.4 x 50.8 mm

Mounting Flange: Add 1″ to length for flanges

No Additional Heat Sinking Required

FREQ. RANGE (MHz)	1 W Output Model Y-1065A Price: 1-3 units	4 W Output Model Y-1065AE Price: 1-3 units
150-300	$849.00 ea.	$949.00 ea.
300.1-600	952.00 ea.	1152.00 ea.

ORDERING INFORMATION:

1. Specify exact output frequency desired.
2. Specify Model Y-1065A for 1 watt output.
3. Specify Model Y-1065AE for 4 watts output.

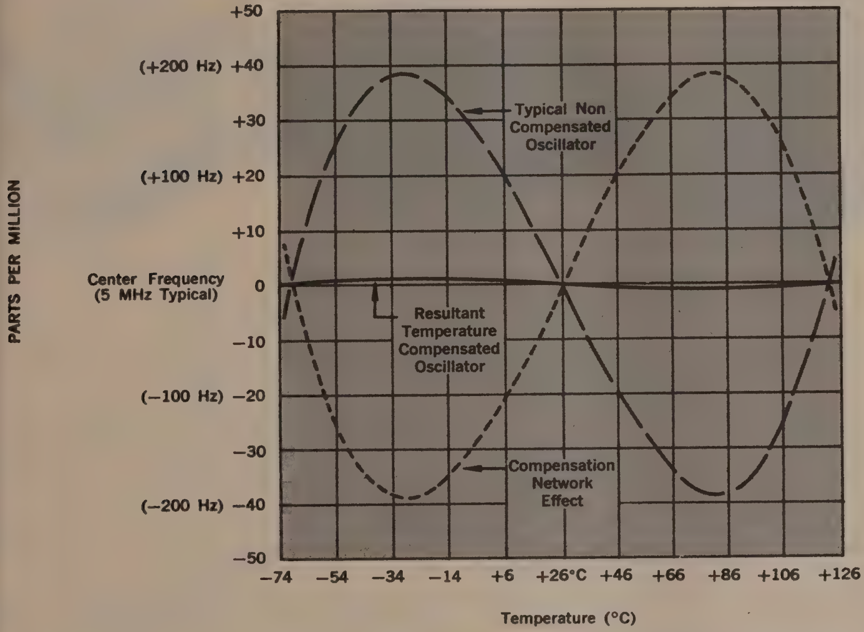
TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS

There are many applications which require that a crystal oscillator exhibit a very tight frequency stability over a wide temperature range. Units of this type in the past have always required ovens in order to hold the crystal and other components at a constant temperature. This is because a crystal will change its output frequency with a change in temperature. In addition, other components in the oscillator circuit will also tend to affect the output frequency with a change in temperature.



The chart above shows the output frequency **versus temperature of a typical 5 MHz crystal oscillator**

The chart above shows the output frequency versus temperature of a typical 5 MHz crystal oscillator which has not been temperature compensated. (This is shown by the long dashes.) It is necessary to design a temperature compensation network which exhibits an effect on frequency which is opposite that effect offered by the crystal. (This is shown by the short dashes.) If perfect compensation is created, a straight line would result where there would be no change in frequency with a change in temperature. The resultant line is represented on the chart above by the solid line through the center.

In most cases, temperature compensation is achieved by first designing a voltage controlled oscillator and second, using a thermistor network consisting of 1 to 4 thermistors with varying slope characteristics which control the output frequency of the oscillator as the temperature changes.

Greenray Industries, Inc. is presently manufacturing many versions used for portable single side band communications equipment, portable test equipment, and electronic aircraft and missile control equipment. Other applications include where very high temperature operation may be occasionally encountered and the use of an oven operating at constant high temperature would cause decreased component reliability. TCXO's are used wherever instantaneous warmup and low power consumption are needed.

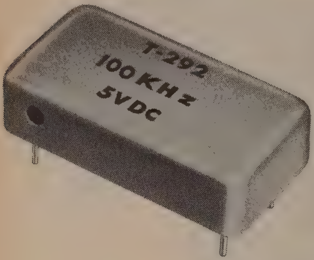
Greenray Industries, Inc.

TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS

10 KHz to 199 KHz SQUARE WAVE MODEL T-292



SPECIFICATIONS:

Frequency Range: 10 kHz to 199 kHz

Frequency Stability:
- $\pm 4 \times 10^{-6}$ over the temperature range
- $\pm 1 \times 10^{-6}$ over a ±5°C range
- $\pm 1 \times 10^{-9}$ averaged for one second at a constant temperature

Temperature Range: 0°C to +50°C

Frequency Adjustment to Compensate for Long Term Aging

Output: Square wave 50/50 ±1% to drive ≤10 TTL loads

Output Voltage: 0 ±.25V to +5 ±.5V

Input Voltage: +5V DC ±.5V

Input Current: 74 ma. nominal

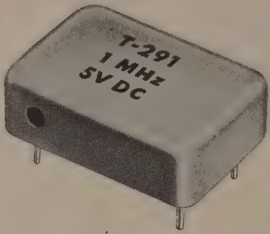
Size: 1.0 x 2.02 x .53″ (L-W-H)
25.4 x 51.3 x 13.5 mm

PRICE: 1-3 units — $285.00 each

ORDERING INFORMATION:

Specify Model T-292 and exact output frequency desired.

200 KHz to 2.99 MHz SQUARE WAVE MODEL T-291



SPECIFICATIONS:

Frequency Range: 200 kHz to 2.99 MHz

Frequency Stability:
- $\pm 4 \times 10^{-6}$ over the temperature range
- $\pm 1 \times 10^{-6}$ over a ±5°C range
- $\pm 1 \times 10^{-9}$ averaged for one second at a constant temperature

Temperature Range: 0°C to +50°C

Frequency Adjustment to Compensate for Long Term Aging

Output: Square wave 50/50 ±1% to drive ≤10 TTL loads

Output Voltage: 0 ±.25V to +5 ±.5V

Input Voltage: +5V DC ±.5V

Input Current: 42 ma. nominal

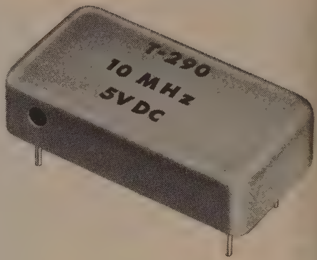
Size: 1.0 x 1.6 x .53″ (L-W-H)
25.4 x 40.6 x 13.5 mm

PRICE: 1-3 units — $245.00 each

ORDERING INFORMATION:

Specify Model T-291 and exact output frequency desired.

3 MHz to 60 MHz SQUARE WAVE MODEL T-290



SPECIFICATIONS:

Frequency Range: 3 MHz to 60 MHz

Frequency Stability:
- $\pm 4 \times 10^{-6}$ over the temperature range
- $\pm 1 \times 10^{-6}$ over a ±5°C range
- $\pm 1 \times 10^{-9}$ averaged for one second at a constant temperature

Temperature Range: 0°C to +50°C

Frequency Adjustment to Compensate for Long Term Aging

Output: Square wave 50/50 ±10% to drive ≤10 TTL loads

Output Voltage: 0 ±.25 to +3.5V min.

Input Voltage: +5V DC ±.5V

Input Current: 20 ma. nominal

Size: 1.0 x 2.02 x .53″ (L-W-H)
25.4 x 51.3 x 13.5 mm

PRICE: 1-3 units — $185.00 each

ORDERING INFORMATION:

Specify Model T-290 and exact output frequency desired.

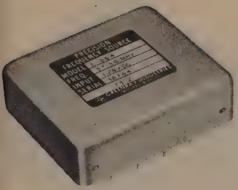
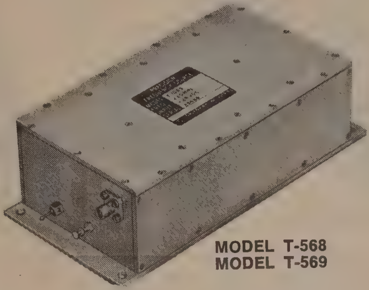
TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS

3 MHz to 600 MHz
SINE or SQUARE WAVE
MODEL T-563, T-564, T-565, T-566, T-567, T-568 & T-569



MODEL T-563
MODEL T-564
MODEL T-565
MODEL T-566

MODEL T-567



MODEL T-568
MODEL T-569

SPECIFICATIONS:

Frequency Range: 3 MHz to 600 MHz

Frequency Stability Over Temperature Range: $\pm 5 \times 10^{-7}$ or $\pm 1 \times 10^{-6}$

Temperature Range: 0°C to 50°C or −30°C to +70°C

Aging: $\pm 2 \times 10^{-6}$ per year at +25°C after 30 days of operation

Output Power: 1 milliwatt minimum into a 50 ohm load

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB minimum*

Input Voltage: +28V DC ±2%

Input Current: 30 ma. to 150 ma. (depending on output frequency)

Frequency Adjust to Compensate for Aging

Connector: Below 75 MHz, PC Pins, Above 75 MHz, SMA; Filtercons for +28V DC

*If square wave output to drive ≤10 TTL loads is desired (below 75 MHz) add the letter "Q" after the model number. (Example: T-564Q). Same price.

Frequency Range and Case Size (L-W-H)	Tolerance Over Temperature Range	Temperature Range	Model Number	Price 1-3 units (each)

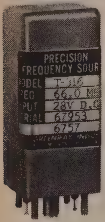
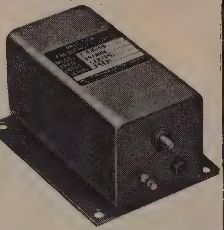
TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS

12 MHz to 600 MHz SINE WAVE

MODEL T-316



MODEL T-316



MODEL T-316G6

SPECIFICATIONS:

Frequency Range: 12 MHz to 600 MHz

Frequency Stability Over Temperature Range: ±.0005% (for lower stability see Model Y-657, Page 7)

Temperature Range: −10°C to +60°C

Output Power: 1 mw minimum into 50 ohm load (10 mw or 20 mw available)

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB minimum

Input Voltage: +28V DC ±2%

Input Current: 75 ma. maximum

Size:
1.5 x 1.5 x 3.75″ (L-W-H) (Model T-316)
2.3 x 3.75 x 1.6″ (L-W-H) (Model T-316G6)

NOTE: Units above 150 MHz will have a 2 x 2 x 4″ (L-W-H) case size. (Model T-316), 3 x 4 x 2.1″ (L-W-H) (Model T-316G6)

Connector: SMA; Filtercons for +28V DC

FREQUENCY RANGE

	Price: 1-3 units
12 MHz to 20 MHz	$197.00 each
20.1 MHz to 50 MHz	215.00 each
50.1 MHz to 75 MHz	215.00 each
75.1 MHz to 100 MHz	237.00 each
100.1 MHz to 150 MHz	263.00 each
150.1 MHz to 300 MHz	299.00 each
300.1 MHz to 600 MHz	459.00 each

ORDERING INFORMATION:

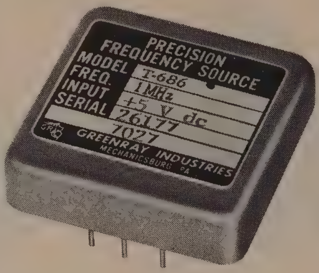
1. Specify Model T-316 or T-316G6 and exact output frequency desired.
2. For all Harmonics and Sub-Harmonics −40 dB minimum, add $30.00 to price and an "X" after Model No.
3. For 10 mw output add "J" after the Model No. For 20 mw output add "K" after the Model No. (Example: Model T-316J or T-316XK)

PRICE:

12 MHz to 150 MHz add $40.00 for 10 mw and $80.00 for 20 mw.
150.1 MHz to 600 MHz add $80.00 for 10 mw and $160.00 for 20 mw.

100 Hz to 3 MHz CMOS OUTPUT

MODEL T-686



SPECIFICATIONS:

Frequency Range: 100 Hz to 3 MHz

Frequency Stability Over Temperature Range: ±1 x 10^{-6} (for lower stability see Model Y-1252, Page 1•332)

Temperature Range: +20°C to +45°C

Output:
Square wave to drive ≤50 CMOS gates
50/50 ±2% (100 Hz to 1 MHz)
50/50 ±10% (1.01 MHz to 3 MHz)

Input Voltage: +12V DC ±2%

Input Current: 10 ma. maximum

Size: 2.0 x 2.0 x .53″ (L-W-H)
50.8 x 50.8 x 13.46 mm

Mounting:
PC Pins and 2 (6-32) threaded studs

Hermetically Sealed

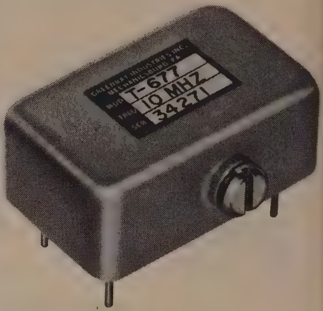
FREQUENCY RANGE:	PRICE: 1-3 units
100 Hz to 62.5 kHz	$145.00 each
62.51 kHz to 3 MHz	195.00 each

ORDERING INFORMATION:

Specify Model T-686 and exact output frequency desired.

5 MHz to 20 MHz SINE WAVE

MODEL T-677



SPECIFICATIONS:

Frequency Range: 5 MHz to 20 MHz

Frequency Stability Over Temperature Range: ±5 x 10^{-6}

Temperature Range: 0°C to +50°C

Output Voltage:
1.0V RMS minimum in a 1500 ohm load

Output:
Sine wave, Harmonics −20 dB min.

Input Voltage: +5V DC ±5%

Input Current: 10 ma. maximum

Size: 1.6 x 1.25 x .63″ (L-W-H)
40.6 x 31.8 x 16.0 mm

Frequency Adjustment to Compensate for Aging

Printed Circuit Board Mounting

O-ring Seal

PRICE: 1-3 units — $175.00 each

Greenray Industries, Inc.

HIGH STABILITY CRYSTAL OSCILLATORS

Frequency range from 1 Hz to 600 MHz.

Oven types have a frequency adjustment through a hole in the unit to set the OSCILLATOR exactly on frequency and to compensate for long-term aging.

SEE CRYSTAL AGING CHART ON PAGE 1•328

The stabilities shown on the specifications in this section are given as "per 24 hours" whether noted or not. Most OSCILLATORS with ovens are pre-aged in our plant until the stability shown on the specification sheet can be held over the 24 hour period. Complete aging of any high stability OSCILLATOR takes about one month and is usually done in the customer's equipment. For this reason, it is best to re-adjust the frequency at the end of one month of operation and at the end of 4 to 6 months of operation.

Greenray Industries, Inc. presently uses only proportional type oven controllers because of their superiority over the snap-action thermostat type. The fact that they do not place switching transients on signal and power lines, and their greater reliability are assets to their use.

The proportional oven controller consists of precision resistors and thermistors in a bridge configuration feeding an integrated circuit op-amp. This output drives a power transistor in series with the oven heater which maintains the oven cavity temperature at the point where the thermistor-resistor bridge maintains balance. With this method it is common to maintain cavity temperature stabilities of ±.2°C over a wide ambient temperature range.

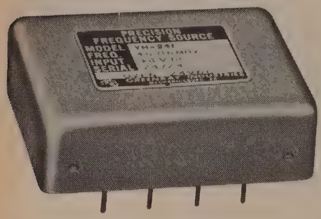
The lowest ambient temperature for which the oven must maintain temperature control, governs the amount of input power required. The lower the ambient the greater the input power necessary. The highest ambient temperature determines the set temperature of the oven, which is typically 15°C above the ambient. A typical cavity temperature would be +65°C for an oscillator specified over an ambient temperature range of 0°C to +50°C or +85°C for an ambient temperature range of 0°C to +70°C. Many variations are possible with proportional oven control; for example, low power types and fast warm-up types. The use of a wide range of input voltages is also possible. For DC, the range is +5V to +40V with +24V and +28V being the most common. For AC operation, 6.3V to 115V is possible. Greenray Industries, Inc. is able to supply snap-action thermostat oven units as replacement units for those presently in use.

OSCILLATORS with proportional ovens, do not use thermostats and therefore, do not exhibit the thermal cycling and associated frequency cycling caused by thermostat control. The short-term stability of these units exceeds ±1 x 10^{-9} per minute, per second, and per millisecond. Where noise or spurious level must be kept below −40 db, the proportional oven control types are recommended.

Greenray Industries, Inc.

HIGH STABILITY CRYSTAL OSCILLATORS

1 Hz to 75 MHz SQUARE WAVE
MODEL YH-991
$\pm 5 \times 10^{-8}$/DAY
FAST WARM-UP



SPECIFICATIONS:

Frequency Range: 1 Hz to 75 MHz

Frequency Stability Over Temperature: $\pm 1 \times 10^{-6}$

Temperature Range: 0°C to +50°C

Maximum Aging Rate: $\pm 5 \times 10^{-8}$/24 hrs. at constant ambient after 30 days of aging

Input Voltages: +20V DC to +28V DC for proportional oven. Maximum turn-on power: 20 watts, 3 watts after 1 minute. Average power at 0°C: approx. 1 watt +5V DC ±2% for oscillator

Maximum Warm-up Time: 5 minutes

Output Voltage: 0 ±.4V to +2.4V min.

Output: Square wave 50/50 ±10% to drive ≤10 TTL loads

Size: 2.56 x 2.94 x .88″ (L-W-H)
65.02 x 74.68 x 22.35 mm

Printed Circuit Board Mounting

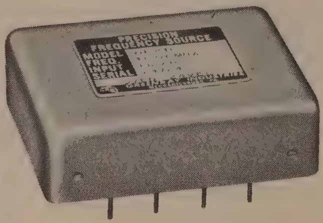
300 Hz to 4.49 kHz	369.50 each
4.5 kHz to 69.9 kHz	339.50 each
70 kHz to 999 kHz	309.50 each
1.0 MHz to 19.99 MHz	279.50 each
20.0 MHz to 50 MHz	309.50 each
50.1 MHz to 100 MHz	339.50 each

ORDERING INFORMATION:

Specify Model YH-991 and exact output frequency desired.

40 KHz to 150 MHz SINE WAVE
MODEL YH-841
$\pm 5 \times 10^{-8}$/DAY
FAST WARM-UP



SPECIFICATIONS:

Frequency Range: 40 kHz to 150 MHz

Frequency Stability Over Temperature: $\pm 1 \times 10^{-6}$

Temperature Range: 0°C to +50°C

Maximum Aging Rate: $\pm 5 \times 10^{-8}$/24 hrs. at constant ambient after 30 days of aging

Input Voltages: +20V DC to +28V DC for proportional oven. Maximum turn-on power: 20 watts, 3 watts after 1 minute. Average power at 0°C: approx. 1 watt. +12V DC ±2% for oscillator

Maximum Warm-up Time: 5 minutes

Output Power: 1 mw minimum into a 50 ohm load

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Size: 2.56 x 2.94 x .88″ (L-W-H)
65.02 x 74.68 x 22.35 mm

Printed Circuit Board Mounting

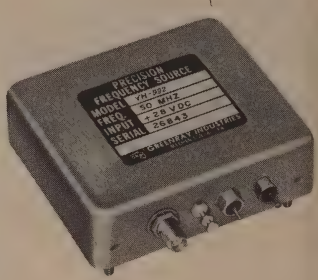
Proportional Oven Control

FREQUENCY RANGE	Price: 1-3 units
40 kHz to 650 kHz	$359.00 each
650.1 kHz to 10 MHz	299.00 each
10.01 MHz to 25 MHz	259.00 each
25.01 MHz to 75 MHz	279.00 each
75.01 MHz to 150 MHz	299.00 each

ORDERING INFORMATION:

Specify Model YH-841 and exact output frequency desired.

20 MHz to 150 MHz SINE WAVE
MODEL YH-992
$\pm 5 \times 10^{-8}$/DAY
FAST WARM-UP



SPECIFICATIONS:

Frequency Range: 20 MHz to 150 MHz

Frequency Stability Over Temperature: $\pm 1 \times 10^{-6}$

Temperature Range: 0°C to +50°C

Maximum Aging Rate: $\pm 5 \times 10^{-8}$/24 hrs. at constant ambient after 30 days of aging

Input Voltages: +20V DC to +28V DC for proportional oven. Maximum turn-on power: 20 watts, 3 watts after 1 minute. Average power at 0°C: approx. 1 watt. +12V DC ±2% for oscillator

Maximum Warm-up Time: 5 minutes

Output Power:
1 mw minimum into a 50 ohm load

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Size: 2.56 x 2.94 x .88″ (L-W-H)
65.02 x 74.68 x 22.35 mm

Connector: SMA; Filtercons for +12V DC and +20V to +28V DC

Proportional Oven Control

FREQUENCY RANGE	Price: 1-3 units
20 MHz to 25 MHz	$295.00 each
25.01 MHz to 75 MHz	315.00 each
75.01 MHz to 150 MHz	335.00 each

ORDERING INFORMATION:

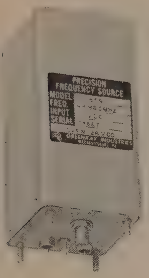
Specify Model YH-992 and exact output frequency desired.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

Greenray Industries, Inc.

HIGH STABILITY CRYSTAL OSCILLATORS

12 MHz to 600 MHz SINE WAVE MODEL YH-859 FAST WARM-UP



SPECIFICATIONS:

Frequency Range: 12 MHz to 600 MHz

Frequency Stability Over Temperature Range: $\pm 1 \times 10^{-6}$

Temperature Range: 0°C to +50°C

Maximum Aging Rate: $\pm 2 \times 10^{-6}$/year after 30 days of aging

Maximum Warm-up Time: 5 minutes

Input Voltage: +28V DC. Maximum turn-on power: 20 watts, 3 watts after 1 minute. Average power at 0°C: approx. 1 watt

Output Power: 1 mw minimum into a 50 ohm load (10 mw or 20 mw available)

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB minimum

Size: 2.0 x 2.0 x 4.0" (L-W-H)
50.8 x 50.8 x 101.6 mm

Connector: SMA; Filtercons for +28V DC

Solder Sealed

Proportional Oven Control

FREQUENCY RANGE	Price: 1-3 units
12 MHz to 20 MHz	$259.00 each
20.1 MHz to 50 MHz	275.00 each
50.1 MHz to 75 MHz	285.00 each
75.1 MHz to 100 MHz	295.00 each
100.1 MHz to 150 MHz	325.00 each
150.1 MHz to 300 MHz	399.00 each
300.1 MHz to 600 MHz	525.00 each

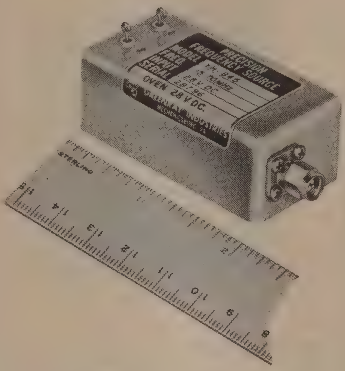
ORDERING INFORMATION:

1. Specify Model YH-859 and exact output frequency desired.
2. For all Harmonics −40 dB minimum, add $30.00 to price and an "X" after Model No. (Example: Model YH-859X).
3. For 10 mw output add "J" after the Model No. For 20 mw output add "K" after the Model No. (Example: Model YH-859J or YH-859XK).

PRICE:

12 MHz to 150 MHz: add $40.00 for 10 mw and $80.00 for 20 mw.
150.1 MHz to 600 MHz: add $80.00 for 10 mw and $160.00 for 20 mw.

10 MHz to 80 MHz SINE WAVE MODEL YH-845 LOW INPUT POWER



SPECIFICATIONS:

Frequency Range: 10 MHz to 80 MHz

Frequency Stability Over Temperature Range and Per Day: $\pm 1 \times 10^{-7}$

Temperature Range: 0°C to +70°C

Maximum Aging Rate: $\pm 5 \times 10^{-8}$/24 hrs. at constant ambient after 30 days of aging

Output Power:
1 mw minimum into a 50 ohm load

Output: Sine wave, Harmonics −26 dB min.; Spurious −50 dB min.

Input Voltage:
+28V DC ±1%

Input Current: 170 ma. maximum

Size: 2.84 x 1.41 x 1.00" (L-W-H)
72.14 x 35.81 x 25.4 mm

Connector: SMA, solder terminal for +28V DC

Frequency Adjustment to Compensate for Aging

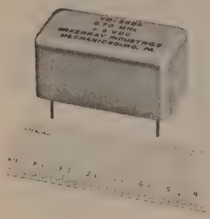
Proportional Oven Control

PRICE: 1-3 units — $659.00 each

ORDERING INFORMATION:

Specify Model YH-845 and exact output frequency desired.

5 MHz to 10 MHz SQUARE WAVE MODEL YH-650A LOW POWER FAST WARM-UP



SPECIFICATIONS:

Frequency Range: 5 MHz to 10 MHz

Frequency Stability:
Over temp. range: $\pm 5 \times 10^{-8}$
Time—24 hours: $\pm 1.0 \times 10^{-8}$ after 30 days aging
Year: $\pm 3 \times 10^{-6}$ after 30 days aging
Second: $\pm 1 \times 10^{-10}$

Temperature Range: 0°C to +50°C

Setting Tolerance: ±10 ppm (no freq. adj.)

Output: Square wave, Rise time and Fall time less than 10 nsec.

Output Voltage: 0 ±.25V to 4V ±1V DC

Input Voltage:
+5V DC ±.25V DC ±1% regulation

Input Current: 400 ma. maximum

Warm-up Time: 10 minutes maximum

Weight: 1.2 oz. maximum

Size 1.0 x 2.05 x 1.0" (L-W-H)
25.4 x 52.07 x 25.4 mm

Mounting: 4 P-C Pins

Oven Controlled

Hermetically Sealed

PRICE: 1-3 units — $550.00 each

ORDERING INFORMATION:

Specify Model YH-650A and exact output frequency desired.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

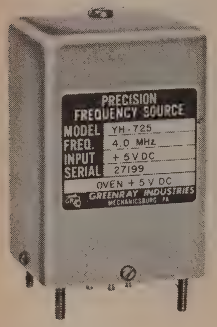
Greenray Industries, Inc.

HIGH STABILITY CRYSTAL OSCILLATORS

1 MHz to 50 MHz SQUARE WAVE

MODEL YH-725

±1 x 10^{-8}/DAY



PRECISION
FREQUENCY SOURCE
MODEL YH-725
FREQ. 4.0 MHz
INPUT +5 V DC
SERIAL 27199
OVEN +5 V DC
GREENRAY INDUSTRIES
MECHANICSBURG, PA.

SPECIFICATIONS:

Frequency Range: 1 MHz to 50 MHz

Frequency Stability:
±1 x 10^{-8}/day at fixed ambient after 30 days of aging
±5 x 10^{-8} over temperature range

Temperature Range: 0°C to +50°C

Output: Square wave, 50/50 ±10% to drive ≤10 TTL loads

Output Voltage: 0 ±.2V to +4V ±1V

Maximum Rise and Fall Time: 15 nanoseconds

Input Voltage: +5V DC ±.25V for oscillator and proportional oven

Input Current: Oven 850 ma. maximum; Oscillator 50 ma. maximum

Size: 2.0 x 2.0 x 3.0″ (L-W-H)
50.8 x 50.8 x 76.2 mm

Frequency Adjustment to Compensate for Aging

Proportional Oven Control

Connector: 8 Pin turret lug header

PRICE: 1-3 units — $425.00 each

ORDERING INFORMATION:

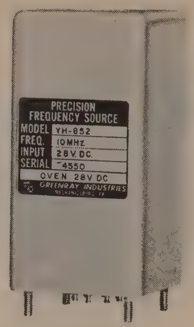
Specify Model YH-725 and exact output frequency desired.

Note: +28V DC oven option available — Specify Model YH-725C, same price. (Oscillator operates on +5V DC, oven on +28V DC)

16 KHz to 70 MHz SINE WAVE

MODEL YH-852

±1 x 10^{-8}/DAY



PRECISION
FREQUENCY SOURCE
MODEL YH-852
FREQ. 10 MHz
INPUT 28 V DC
SERIAL 4550
OVEN 28V DC
GREENRAY INDUSTRIES

SPECIFICATIONS:

Frequency Range: 16 KHz to 70 MHz

Frequency Stability Over Temperature Range: ±5 x 10^{-8}

Temperature Range: 0°C to +50°C

Aging Rates at Constant Ambient After 30 Days of Aging:
16 kHz to 20 MHz: ±1 x 10^{-8}/24 hrs.
20.1 MHz to 70 MHz: ±5 x 10^{-8}/24 hrs.
All frequencies: ±5 x 10^{-10}/second

Output Voltage: 1V RMS minimum into a 1K ohm load (below 20 MHz) or .22V RMS minimum into a 50 ohm load (above 20 MHz)

Output: Sine wave, Harmonics −26 dB minimum; Spurious −60 dB minimum

Input: 28V DC ±2% for oscillator; 28V DC ±10% for oven

Input Current:
Oven: 650 ma. maximum
Oscillator: 50 ma. maximum

Connector: 8 Pin turret lug header

Proportional Oven Control

Size: 2.0 x 2.0 x 4.0″ (L-W-H)
50.8 x 50.8 x 101.6 mm

FREQUENCY RANGE:	**PRICE: 1-3 units**
16 kHz to 999 kHz	$489.00 each
1 MHz to 70 MHz	439.00 each

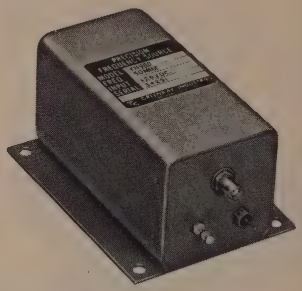
ORDERING INFORMATION:

Specify Model YH-852 and exact output frequency desired.

1 MHz to 110 MHz SINE WAVE

MODEL YH-980

ULTRA-LOW PHASE NOISE



PRECISION
FREQUENCY SOURCE
MODEL
FREQ.
INPUT
SERIAL
GREENRAY INDUSTRIES

SPECIFICATIONS:

Frequency Range: 1 MHz to 110 MHz

Frequency Stability:
±1 x 10^{-7}/day at fixed ambient after 30 days of aging
±1 x 10^{-7} over temperature range

Temperature Range: 0°C to +50°C

Output Power:
10 mw minimum into a 50 ohm load

Output:
Sine wave, Harmonics −40 dB min.

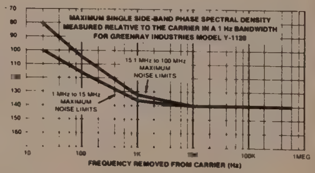
Input Voltage: +28V DC ±2%

Input Current: 550 ma. maximum

Size: 2.0 x 4.0 x 2.0″ (L-W-H)
50.8 x 101.6 x 50.8 mm

Connector: SMA; Filtercons for +28V DC

Frequency Adjustment to Compensate for Aging



FREQUENCY RANGE:	**PRICE: 1-3 units**
1 MHz to 15.0 MHz	$595.00 each
15.01 MHz to 110 MHz	549.00 each

ORDERING INFORMATION:

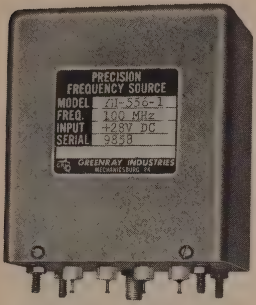
Specify Model YH-980 and exact output frequency desired.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

Greenray Industries, Inc.

HIGH STABILITY CRYSTAL OSCILLATORS

1 MHz to 10 MHz
SINE WAVE
MODEL YH-556-1
±1 x 10^{-8}/DAY



PRECISION
FREQUENCY SOURCE
MODEL YH-556-1
FREQ. 100 MHz
INPUT +28V DC
SERIAL 9858
GREENRAY INDUSTRIES
MECHANICSBURG, PA.

SPECIFICATIONS:

Frequency Range: 1 MHz to 10 MHz

Frequency Stability:
- ±1 x 10^{-8}/24 hours
- ±2 x 10^{-6}/year after 30 days of operation
- ±1 x 10^{-9}/second
- ±5 x 10^{-8} over temperature range

Temperature Range: +10°C to +50°C

Output Power:
1 milliwatt minimum into a 50 ohm load

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Input Voltage:
+28V DC ±2% for oscillator and oven

Input Current:
Oven: 600 ma. maximum
Oscillator: 40 ma. maximum

Connector: SMA; Filtercons for +28V DC

Frequency Adjustment to Compensate for Aging

Proportional Oven Control

Size: 1.94 x 2.97 x 3.5″ (L-W-H)
49.28 x 75.44 x 88.90 mm

PRICE: 1-3 units — $425.00 each

ORDERING INFORMATION:

Specify Model YH-556-1 and exact output frequency desired.

10.1 MHz to 75 MHz
SINE WAVE
MODEL YH-556-1

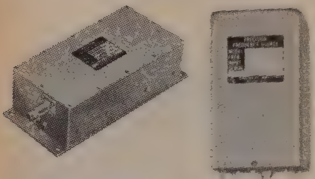
Greenray Industries, Inc.

HIGH STABILITY CRYSTAL OSCILLATORS

40 MHz to 600 MHz SINE or SQUARE WAVE

MODEL YH-278A

$\pm 1 \times 10^{-8}$/DAY



SPECIFICATIONS:

Frequency Range: 40 MHz to 600 MHz

Frequency Stability:
- $\pm 1 \times 10^{-9}$ per 70 milliseconds
- $\pm 1 \times 10^{-9}$ per second
- $\pm 1 \times 10^{-8}$ per 24 hours after 15 days of aging
- $\pm 5 \times 10^{-8}$ per week after 30 days of aging
- $\pm 5 \times 10^{-8}$ over temperature range

Temperature Range: +20°C to +50°C

Output Power:
10 milliwatts min. into a 50 ohm load

Output: Sine wave, Harmonics and Sub-Harmonics −26 dB minimum; Spurious −60 dB minimum

Input Voltage:
+28V DC ±2% for oscillator and oven

Input Current: 750 ma. maximum

Connector: BNC; Filtercons for +28V DC

Proportional Oven Control

Size: 40 MHz to 160 MHz:
2.75 x 2.75 x 4.62″ (L-W-H)
69.85 x 69.85 x 117.35 mm
160.1 MHz to 600 MHz:
6.0 x 3.0 x 2.0″ (L-W-H)
152.40 x 76.20 x 50.8 mm
(add 1″ to length for flanges)

FREQUENCY RANGE:	PRICE: 1-3 units
40 MHz to 160 MHz	$575.00 each
160.1 MHz to 320 MHz	750.00 each
320.1 MHz to 600 MHz	925.00 each

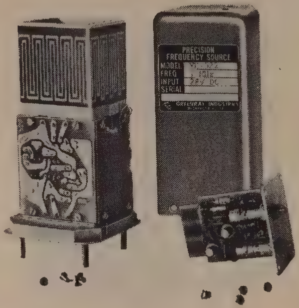
ORDERING INFORMATION:

1. Specify Model YH-278A and exact output frequency desired.
2. If square wave output to drive ≤10 TTL loads is desired (below 100 MHz) add the letter "Q" after the Model No. (Example: YH-278AQ). Requires additional +5V DC ±.25V input voltage (same price).
3. If square wave output to drive ECL is desired (below 300 MHz) add the letter "U" after the Model No. (Example: YH-278AU). Requires additional −5.2V DC ±10% input voltage. Output wave form and levels will drive ≤5 standard ECL gates (same price).

1 MHz to 20 MHz SINE or SQUARE WAVE

MODEL YH-522-1W

$\pm 1 \times 10^{-9}$/DAY



SPECIFICATIONS:

Frequency Range: 1 MHz to 20 MHz

Frequency Stability:
- $\pm 1 \times 10^{-9}$/day after 30 days of aging
- $\pm 1 \times 10^{-10}$/minute
- $\pm 1 \times 10^{-8}$ over temperature range

Output Voltage:
1 VRMS minimum into a 1000 ohm load

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Temperature Range: 0°C to +55°C

Input Voltage: +28V DC ±1%

Input Current: 650 ma. maximum

Frequency Adjustment: 2 adjustments for resolution of better than $\pm 1 \times 10^{-9}$

Size: 2.13 x 2.13 x 4.25″ (L-W-H)
54.10 x 54.10 x 107.95 mm

Cast Aluminum Oven Cavity for Maximum Stability

Connector: 8 Pin turret lug header

PRICE: 1-3 units — $535.00 each

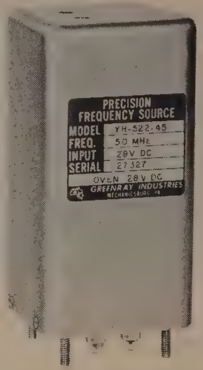
ORDERING INFORMATION:

1. Specify Model YH-522-1W and exact output frequency desired.
2. If square wave output to drive ≤10 TTL loads is desired (below 100 MHz) add the letter "Q" after the Model No. (Example: YH-522-1WQ). Requires additional +5V DC ±.25V input voltage (same price).
3. To specify an octal plug-in rather than turret lug header, specify Model YH-522-1 instead of Model YH-522-1W (same price).

20.1 MHz to 120 MHz SINE WAVE

MODEL YH-522-45

$\pm 1 \times 10^{-8}$/DAY



SPECIFICATIONS:

Frequency Range: 20.1 MHz to 120 MHz

Frequency Stability at Fixed Ambient:
- $\pm 5 \times 10^{-8}$/week after 30 days of aging
- $\pm 1 \times 10^{-9}$/70 milliseconds
- $\pm 1 \times 10^{-9}$/second
- $\pm 1 \times 10^{-8}$/24 hours after 15 days aging

Frequency Stability Over Temperature Range: $\pm 5 \times 10^{-8}$

Temperature Range: 0°C to +50°C

Output Power
1 milliwatt minimum into a 50 ohm load

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB minimum; Spurious −60 dB minimum

Input Voltage:
+28V DC ±2% for oscillator and oven

Input Current: 650 ma. maximum

Size: 2.13 x 2.13 x 4.25″ (L-W-H)
54.10 x 54.10 x 107.95 mm

Connector: SMA; Filtercons for +28V DC

PRICE: 1-3 units — $579.00 each

ORDERING INFORMATION:

Specify Model YH-522-45 and exact output frequency desired.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

Greenray Industries, Inc.

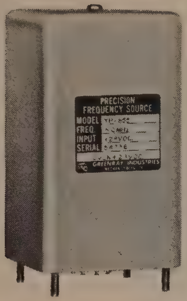
HIGH STABILITY CRYSTAL OSCILLATORS

1 MHz to 10 MHz SINE WAVE

MODEL YH-855

FREQUENCY STANDARD

±1 x 10^{-9}/DAY



SPECIFICATIONS:

Frequency Range: 1 MHz to 10 MHz

Frequency Stability:
±5 x 10^{-9} over temperature range
±1 x 10^{-9}/day after 72 hours stabilization period at constant ambient after 30 days of aging

Temperature Range: +20°C to +55°C

Output Voltage:
1V RMS minimum into a 1000 ohm load

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Input Voltage:
+28V DC ±2% for oscillator and oven

Input Current: 1 amp maximum

Size: 2.75 x 2.75 x 4.62″ (L-W-H)
69.85 x 69.85 x 117.35 mm

Connector: 8 Pin turret lug header

Proportional Oven Control

PRICE: 1-3 units — $759.00 each

ORDERING INFORMATION:

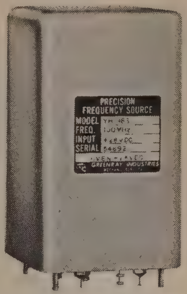
1. Specify Model YH-855 and exact output frequency desired.
2. For 1 mw minimum into a 50 ohm load, suffix Model No. with L (Example YH-855L) and add $25.00 to price.

80 MHz to 120 MHz SINE WAVE

MODEL YH-986

FREQUENCY STANDARD

±1 x 10^{-9}/DAY



SPECIFICATIONS:

Frequency Range: 80 MHz to 120 MHz

Frequency Stability:
±5 x 10^{-8} over temperature range
±1 x 10^{-9}/day at a constant ambient after 30 days of aging

Temperature Range: +10°C to +40°C

Output Power:
10 mw minimum into a 50 ohm load

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB minimum; Spurious −60 dB minimum

Input Voltage:
+24V DC ±2% at 800 ma. maximum
−24V DC ±2% at 50 ma. maximum

Size: 2.75 x 2.75 x 4.63″ (L-W-H)
69.85 x 69.85 x 117.60 mm

Connector: SMA; Filtercons for +24V DC and −24V DC

SSB Phase Noise in a 1 Hz Bandwidth*

20 Hz	−68 dB	10 kHz	−125 dB
100 Hz	−90 dB	100 kHz	−130 dB
1 kHz	−118 dB	500 kHz	- 130 dB

*Typical readings 6 to 10 dB better.

Ideal for Input Standard of Phase Locked Microwave Sources

PRICE: 1-3 units — $865.00 each

ORDERING INFORMATION:

Specify Model YH-986 and exact output frequency desired.

1 MHz to 20 MHz SINE WAVE

MODEL YH-989

±5 x 10^{-9}/DAY

RACK MOUNT

PRECISION FREQUENCY SOURCE

SPECIFICATIONS:

Frequency Range: 1 MHz to 20 MHz

Frequency Stability:
±1 x 10^{-8} over temperature range
±5 x 10^{-9}/day at a constant ambient after 30 days of aging

Temperature Range: −30°C to +60°C

Output Voltage:
1V RMS minimum into a 50 ohm load

Output: Sine wave, Harmonics −40 dB minimum; Spurious −60 dB minimum

Input Voltage: 105 to 125V AC, 47-63 Hz

Size: 19.0 x 6.0 x 3.5″ (L-H-D)
482.6 x 152.4 x 88.9 mm

Connector: BNC

Option 1: Oscillator only, no power supply or panel assembly. Requires +12V DC ±2% at 2.5 amps maximum
Size: 6.3 x 3.0 x 4.0″ (L-W-H)
160.0 x 76.20 x 101.6 mm
Specify Model YH-989A

PRICE: 1-3 units
Model YH-989 — $1135.00 each
Model YH-989A — 845.00 each

ORDERING INFORMATION:

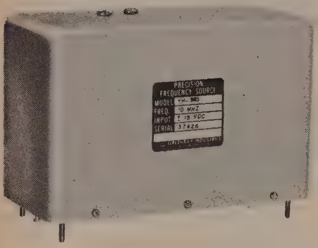
Specify Model No. and exact output frequency desired.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

Greenray Industries, Inc.

HIGH STABILITY CRYSTAL OSCILLATORS

5 MHz to 25 MHz
SINE WAVE
MODEL YH-983
FREQUENCY STANDARD
±5 x 10^{-10}/DAY



SPECIFICATIONS:

Frequency Range: 5 MHz to 25 MHz

Frequency Stability:
- ±5 x 10^{-10}/day at fixed ambient after 30 days of aging
- ±1 x 10^{-8} over temperature range

Temperature Range: −25°C to +60°C

Output Power:
1 mw minimum into a 50 ohm load

Output: Sine wave, Harmonics and Sub-Harmonics −40 dB minimum; Spurious −60 dB minimum

Input Voltages: + and −15V DC ±2%

Input Current: 1.2 amps maximum

Connector:
BNC; Filtercons for + and −15V DC

Proportional Oven Control

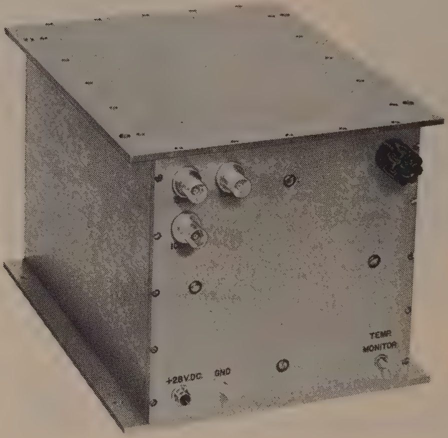
Size: 6.08 x 2.86 x 3.81″ (L-W-H)
154.43 x 72.64 x 96.77 mm

PRICE: 1-3 units — $1275.00 each

ORDERING INFORMATION:

Specify Model YH-983 and exact output frequency desired.

100 KHz, 1 MHz & 5 MHz
SINE WAVE
MODEL YH-823
EXCELLENT LABORATORY STANDARD
VERY LOW PHASE NOISE



SPECIFICATIONS:

Output Frequencies: 100 kHz, 1 MHz and 5 MHz

Long Term Stability: ±1 x 10^{-10} per day at a constant ambient after 30 days of aging
±5 x 10^{-11} per day at a constant ambient after 6 months

Short Term Stability: (Time Domain) 5 x 10^{-12} per second
1.5 x 10^{-11} per 100 milliseconds
1.5 x 10^{-10} per 10 milliseconds

(Frequency Domain) single sideband
20 Hz from Carrier: −130 dB
100 Hz from Carrier: −135 dB
1000 Hz from Carrier: −140 dB

NOTE: Measurement Bandwidth: 1 Hz

Temperature Range: +15°C to +40°C

Output Power: 1 mw minimum into a 50 ohm load (each output)

Output: Sine wave, Harmonics −40 dB minimum, Spurious −60 dB minimum

Input Voltage: +28V DC ±1%

Input Current: 2.0 amps maximum at turn-on

Size: 6.5 x 8.0 x 5.5″ (L-W-H), 165.1 x 203.2 x 139.7 mm

Connectors: 3 BNC's, Filtercon on +28V DC

Double Proportional Oven for High Stability

PRICE: 1-3 units — $2475.00 each

ORDERING INFORMATION: Specify Model YH-823

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

Greenray Industries, Inc.

VOLTAGE CONTROLLED OSCILLATORS

TYPES:

I. R-C (RESISTANCE PLUS CAPACITANCE) OSCILLATORS

Recommended where:

a. Frequencies between 1 Hz and 100 kHz are required.
b. Very wide frequency swing is required (between ±10% and ±100%).
c. Frequency stabilities better than .5% are not required.
d. Linearity up to ±.1% is desired.
e. Smallest size possible is required.

II. L-C (INDUCTANCE PLUS CAPACITANCE) OSCILLATORS

Recommended where:

a. Frequencies between 50 Hz and 200 MHz are required.
b. Medium frequency swing is required (±1% to ±20%).
c. Frequency stabilities up to .05% are required.
d. Linearity up to ±.5% is desired.

III. CRYSTAL OSCILLATORS (VCXO)

Recommended where:

a. Frequencies between 1 Hz and 600 MHz. (Lower output frequencies have built-in dividers.)
b. Very narrow frequency swing is required from ±.001% to ±.1%.
c. Frequency stabilities from ±.000001% to ±.1% are required.
d. Linearities between ±.5% and ±10% are required.

Rate of Modulation: Most VCXO's can be supplied for modulation rates up to 100 kHz. However, if the oscillator is to be modulated at a rate faster than 10 kHz, please specify modulation rate when placing order.

Types of Modulation Voltage: Inputs may be DC, pulsating DC or AC. It is best to specify the type of modulation voltage when placing an order.

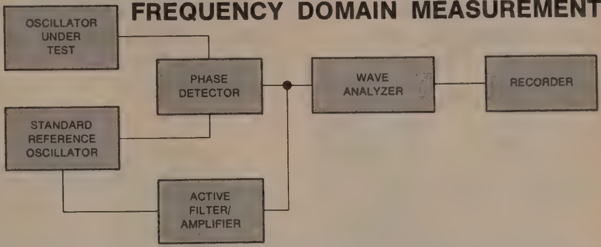
LINEARITY:

Linearity is a function of the percentage of graphic error versus the amount of frequency shift.

In the chart, an example of perfect straight-line linearity is shown by line "A." If the specifications for an oscillator called for a linearity of ±5% and the actual amount of shift of an oscillator was 800 Hz total (as shown) the curve of output frequency versus the actual plotted value for a given voltage input could vary ±40 Hz (800 Hz x ±5% = ±40 Hz). This is shown by lines "B" and "C." A typical curve of a voltage controlled oscillator holding a linearity of ±5% is shown by line "D."

Although non-linear, the voltage versus frequency change always exhibits a smooth curve.

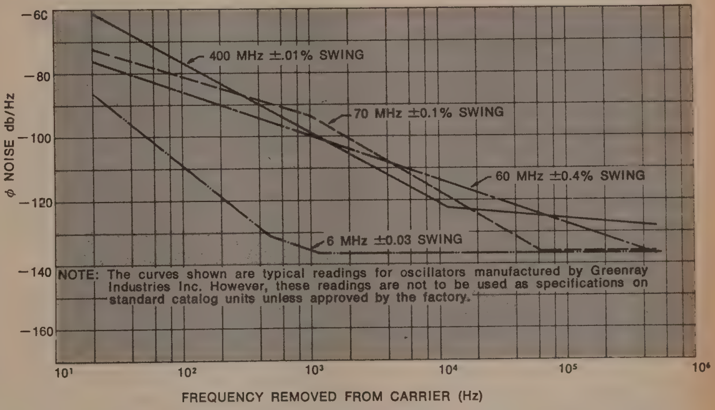
BLOCK DIAGRAM FOR FREQUENCY DOMAIN MEASUREMENTS



From the above test set-up we obtain the required data to compute the single sideband phase spectral density relative to the carrier at a particular frequency from the carrier in the desired bandwidth.

TYPICAL SINGLE SIDE-BAND PHASE SPECTRAL DENSITY MEASURED RELATIVE TO THE CARRIER IN A 1 Hz BANDWIDTH

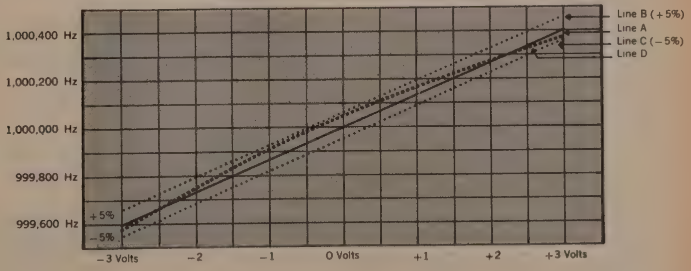
VOLTAGE CONTROLLED CRYSTAL OSCILLATORS



NOTE: The curves shown are typical readings for oscillators manufactured by Greenray Industries Inc. However, these readings are not to be used as specifications on standard catalog units unless approved by the factory.

This chart is accurate for both voltage controlled crystal oscillators and temperature compensated, voltage controlled crystal oscillators.

See Page 1•329 for measurement information and other graphs.



NOTE: Re-adjusting the center frequency to compensate for component aging does not appreciably change the shape of the linearity curve.

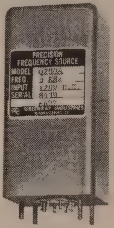
Greenray Industries, Inc.

VOLTAGE CONTROLLED OSCILLATORS

20 Hz to 50 KHz SINE, SQUARE OR PULSE OUTPUT
MODEL Q-200A
R-C V.C.O.
WIDE BAND



SPECIFICATIONS:

Center Frequency Range: 20 Hz to 50 kHz

Frequency Swing Range: ±10% or ±30% (other ranges available on request)

Frequency Stability:
±.5% over the temperature range of 0°C to +50°C
±2% over the temperature range of −40°C to +60°C

Output Voltage: −10V peak-to-peak minimum into a 1000 ohm load (negative going pulse) AC coupled

Output Wave Form: Pulse, less than 1 µsec rise time. Pulse width, 1 to 20 µsec depending on frequency

Input Voltage: +28V DC ±2%

Input Current: 50 ma. maximum

Size: 2.0 x 2.0 x 4.0″ (L-W-H)
50.8 x 50.8 x 101.6 mm

Control Voltage: 0 to +10V DC. This oscillator has two adjustments on top. One to adjust for the low frequency end at 0 volts input and the other to adjust to the high frequency end at +10V DC. This oscillator will then be on frequency at +5V DC input.

Positive Slope

Linearity: Better than ±2%

Modulation Input Impedance: 600 ohms

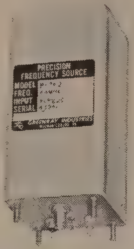
Hermetically Sealed

PRICE: 1-3 units — $299.00 each

ORDERING INFORMATION:

1. Specify exact center frequency desired.
2. Specify Model Q-200A for ±10% swing.
3. Specify Model Q-200B for ±30% swing.
4. Sine wave output is available on Model Q-200A only. For sine wave output (10% maximum harmonic distortion), specify Model Q-200AS. **Price: 1-3 units** — $395.00 each. Sine wave output: 1V RMS minimum into a 1000 ohm load.
5. Square wave output is available on either Model Q-200A or Q-200B. For square wave output specify Model Q-200AQ or Q-200BQ. **Price: 1-3 units** — $345.00 each.
   Square wave output suitable to drive ≤10 TTL loads.

1 KHz to 200 MHz SINE WAVE
MODEL P-360
L-C V.C.O.



SPECIFICATIONS:

Center Frequency Range:
1 kHz to 200 MHz

Frequency Swing Ranges:
±1%, ±5%, ±10%, ±20%

Frequency Stability Over Temperature Range: ±.20% with ±1% swing
±.25% with ±5% swing
±.30% with ±10% swing
±.40% with ±20% swing

Temperature Range: 0°C to +50°C

Output Power:
1 milliwatt minimum into a 50 ohm load, 20 MHz to 200 MHz
1V RMS minimum into a 1000 ohm load, 1 kHz to 19.99 MHz

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB; Spurious −60 dB

Input Voltage: +28V DC ±1%

Input Current: 100 ma. maximum

Control Voltage: 0 to ±3V (DC coupled)

Negative Slope

Maximum Modulation Rate:
1%* of output frequency

Modulation Input Impedance: 1000 ohms

Size: 2.0 x 2.0 x 4.0″ (L-W-H)
50.8 x 50.8 x 101.6 mm

Linearity: ±5% or better

Connector: SMA; Filtercons for +28V DC

Center Frequency Adjustment to Compensate for Aging

Solder Sealed

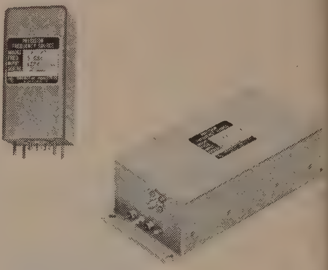
*Consult factory for faster modulation rates.

FREQUENCY RANGE:	PRICE: 1-3 units Percent Swing ±1% or ±5%	±10%	±20%
1 KHz-99.99 kHz	$489	—	—
100 kHz-19.99 MHz	385	$435	$485
20 MHz-100 MHz	395	445	495
100 MHz-200 MHz	445	495	—

ORDERING INFORMATION:

1. Specify Model P-360A for ±1% swing.
2. Specify Model P-360B for ±5% swing.
3. Specify Model P-360C for ±10% swing.
4. Specify Model P-360D for ±20% swing.
5. Specify exact center freq. desired.

100 KHz to 200 MHz SINE WAVE
MODEL PH-229 & PH-230
L-C V.C.O.



SPECIFICATIONS:

Center Frequency Range:
100 kHz to 200 MHz

Frequency Swing Range: ±2% or ±10%

Temperature Range: 0°C to +50°C

Output Power:
1 milliwatt minimum into a 50 ohm load

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB; Spurious −60 dB minimum

Input Voltage:
+28V DC ±2% for oscillator and oven

Size: 2 x 2 x 4″ high (up to 50 MHz)
50.8 x 50.8 x 101.6 mm
3 x 6 x 2″ high (above 50 MHz)
76.2 x 152.4 x 50.8 mm

Center Frequency Adjustment to Compensate for Aging

Proportional Oven Control

Control Voltage: May be DC coupled or AC coupled with the FM modulation rate up to 15 kHz.* A variable DC bias of 0 to ±3V DC may be used rather than an AC input to set the frequency at a fixed input.

Negative Slope

Linearity: ±5% or better

Modulation Input Impedance: 1000 ohms

Non-Hermetically Sealed

Input Current: 650 ma. maximum

*Consult factory for higher modulation rates.

Stabilities

Model	Per Hour	Per Day & Over Temp.
PH-229	±.01%	±.02%
PH-230	±.001%	±.02%

FREQUENCY RANGE:	PRICE: 1-3 units
Model PH-229	
100 kHz to 50 MHz	$585.00
50.1 MHz to 200 MHz	785.00
Model PH-230	
100 kHz to 50 MHz	845.00
50.1 MHz to 200 MHz	995.00

ORDERING INFORMATION:

1. Specify Model PH-229 for ±10% swing.
2. Specify Model PH-230 for ±2% swing.
3. Specify exact center freq. desired.

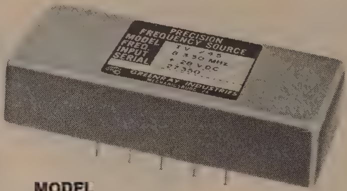
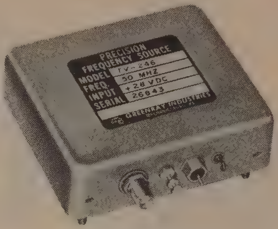
1. Specify exact center freq. desired.
2. Specify Model SH-219A for ±.25% frequency swing.
3. Specify Model SH-219B for ±.5% frequency swing.
4. Specify Model SH-219C for ±1% frequency swing.

4 MHz to 70 MHz
SINE WAVE
MODEL TV-245 & TV-246
TEMPERATURE COMPENSATED V.C.X.O.
HIGH STABILITY



MODEL TV-245



MODEL TV-246

SPECIFICATIONS:

Center Frequency Range: Model TV-245: 4 MHz to 19.9 MHz
Model TV-246: 20 MHz to 70 MHz

Frequency Swing Range: ±.005% to ±.1%

Frequency Stability Over Temperature Range: ±.00025% to ±.005%

Temperature Range: 0°C to +50°C

Output Power: Model TV-245: 1V RMS minimum into a 1000 ohm load
Model TV-246: 1 milliwatt minimum into a 50 ohm load

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB min.; Spurious −60 dB min.

Input Voltage: +28V DC ±2%

Input Current: 60 ma. maximum

Control Voltage: 0 to ±3V (DC coupled with a maximum modulation rate of 15 kHz)

Modulation Input Impedance: 1000 ohms

Linearity: ±5% or better

Negative Slope

Connector: Model TV-245: PC Pins Model TV-246: SMA; Filtercons for +28V DC

Size: Model TV-245: 3.75 x 1.63 x .88″ (L-W-H)
Model TV-246: 2.94 x 2.56 x .88″ (L-W-H)

Center Frequency Adjustment to Compensate for Aging

Swing	Stability Over Temperature	Model Number
±.005%	±.00025%	TV-245A-2 or TV-246A-2
±.01%	±.0005%	TV-245B-2 or TV-246B-2
±.03%	±.0015%	TV-245C-2 or TV-246C-2
±.05%	±.0025%	TV-245D-2 or TV-246D-2
±.08%	±.0040%	TV-245E-2 or TV-246E-2
±.10%	±.0050%	TV-245F-2 or TV-246F-2

FREQUENCY RANGE	MODEL NUMBER	PRICE: 1-3 Units
4 MHz to 19.9 MHz	TV-245	$550.00 each
20 MHz to 70 MHz	TV-246	620.00 each

ORDERING INFORMATION:

1. Order appropriate model number for the swing and temperature stability desired.
2. Specify exact center frequency desired.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

Greenray Industries, Inc.

L—C OSCILLATORS

Recommended where:

Stabilities of ±.2% to ±2%, (without oven), over a wide temperature range are required.

Shock and/or vibration specifications are too high to allow use of crystals (please specify).

Relatively low cost is desired.

Wide range, stable, frequency shift is required. (Variable capacitor or variable inductor type.)

MODEL L-217

SPECIFICATIONS:

Frequency Range: 100 Hz to 1 MHz

Available With External Frequency Adjustment at No Extra Cost

Frequency Stability Over Temperature Range: ±0.5%

Temperature Range: −40°C to +70°C

Output: 1.5V RMS minimum into a 4700 ohm load

Output: Sine wave, 5% maximum Harmonic distortion

Input: +28V DC ±1V DC

Input Current: 25 ma. maximum

External Frequency Adjustment is accomplished by using a 0 to 10,000 ohm variable or fixed resistor to be supplied by the customer. This allows oscillator to be set exactly on frequency.

Hermetically Sealed

Withstands Extreme Shock and Vibration

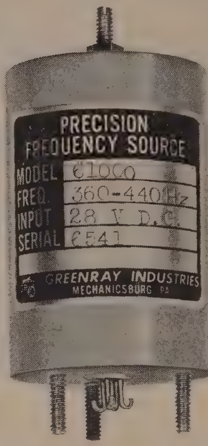
Size:
L-216: 1.5 dia. x 3.31" high, 38.1 x 84.1 mm (Below 499 Hz)
1.25 dia. x 2.56" high, 31.8 x 65.0 mm (Above 500 Hz)
L-217: 2.56 x 2.94 x .88" (L-W-H), 65.0 x 74.7 x 22.4 mm

PRICE: 1-3 units — $107.00 each

ORDERING INFORMATION:

1. Specify exact output frequency desired.
2. If external frequency adjustment is desired, add the letter "Z" after the Model No. (Example: L-216Z or L-217Z.) (Same price.)

400 Hz to 10 MHz SINE WAVE MODEL 61000 ±10% ADJUSTMENT RANGE



PRECISION
FREQUENCY SOURCE
MODEL 61000
FREQ. 360-440 Hz
INPUT 28 V D.C.
SERIAL 6541
GREENRAY INDUSTRIES
MECHANICSBURG PA

SPECIFICATIONS:

Center Frequency Range:
400 Hz to 10 MHz

Frequency Stability:
±0.3% over temperature range
±.05% at any fixed ambient

Temperature Range: −30°C to +65°C

Input Voltage: +28V DC ±10%

Input Current: 30 ma. maximum

Output: Sine wave, less than 10% maximum Harmonic distortion

Output Voltage: 1.5V RMS minimum into any load between 5000 ohms to 2 Megohms

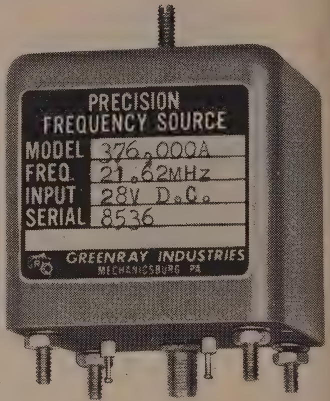
Size: 1.5 dia. x 3.68" high, 38.1 x 93.5 mm

PRICE: 1-3 units — $140.00 each

ORDERING INFORMATION:

Specify Model 61000 and exact center frequency desired.

10 MHz to 250 MHz SINE WAVE MODEL 376000A ±10% ADJUSTMENT RANGE



PRECISION
FREQUENCY SOURCE
MODEL 376,000A
FREQ. 21.62MHz
INPUT 28V D.C.
SERIAL 8536
GREENRAY INDUSTRIES
MECHANICSBURG PA

SPECIFICATIONS:

Center Frequency Range:
10 MHz to 250 MHz

Frequency Stability:
±0.3% over temperature range
±.05% at any fixed ambient

Temperature Range: −30°C to +65°C

Input Voltage: +28V DC ±2%

Input Current: 30 ma. maximum

Output:
Sine wave, Harmonics −20 dB min.

Output Voltage:
1 milliwatt minimum into a 50 ohm load

Size: 2.0 x 2.0 x 2.0" (L-W-H)
50.8 x 50.8 x 50.8 mm

PRICE: 1-3 units — $229.00 each

NOTE: Most of the lower frequency oscillators of this Model have the slug on top for frequency adjustment as shown in the picture.

On most of the higher frequency oscillators no slug is used and the frequency is adjusted through a hole in the top of the unit.

ORDERING INFORMATION:
Specify Model 376000A and exact center frequency desired.

Greenray Industries, Inc.

MULTIPLE FREQUENCY OSCILLATORS

These oscillators are widely used where a large number of output frequencies are required from one unit, which can be selected with:

a. An internal or external rotary switch.
b. External TTL gate (logical "1" -on; logical "0" -off).
c. External BCD codes; 01, 00, etc.

This offers an excellent cost reduction over using several single fixed frequency oscillators.

Uses include multiple channel communications equipment, test equipment, and synthesizers.

We can supply many other varieties to your specifications and frequency requirements than those shown in this catalog section.

Call or write for a fast quotation on your exact requirements for multiple output, programmable sources, or phase locked loops.

Technical personnel are always available to discuss your requirements.

PHONE: (717) 766-0223 TWX NO. 510-650-4939

COMPONENTS AND SUB-SYSTEMS

FOR RADAR, TELEMETRY, SURFACE & SPACE COMMUNICATIONS, RADIO ASTRONOMY & ELECTRONIC COUNTERMEASURES

SUBSYSTEM CAPABILITY

Over 15 years of experience as a leading supplier of components with an in-depth knowledge in the area of systems design uniquely qualifies Greenray Industries, Inc., to fill your subsystem requirements.

Let Greenray Industries' building block techniques and expertise in the solution of interface problems enhance your system performance and reliability in the following areas:

Frequency Synthesis using the following techniques:

- — phase lock
- — digital
- — crystal switching
- — harmonic multiplication

MULTIPLE FREQUENCY OSCILLATORS

1 MHz to 50 MHz
SINE WAVE
MODEL M-400
1 to 12 CHANNELS

SPECIFICATIONS:

Frequency Range: 1 MHz to 50 MHz

Frequency Stability Over Temperature Range: ±.005%

Temperature Range: −40°C to +70°C

Output:
Sine wave, Harmonics −20 dB min.

Output Power:
1 milliwatt min. into a 50 ohm load

Input Voltage: +28V DC ±2%

Input Current: 25 ma. maximum

Size: 2.56 x 2.94 x 3.06″ (L-W-H)
65.02 x 74.68 x 77.72 mm

Mounting: 4 threaded inserts

Connector: 8 Pin turret lug header

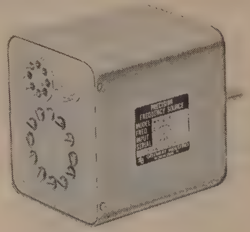
Non-Hermetically Sealed

PRICE: 1-3 units — $645.00 each
10 channels

ORDERING INFORMATION:

1. Specify Model M-400
2. State number of channels and exact output frequencies desired.
3. Subtract $10.00 from price for each channel under 10.
4. Add $40.00 to price for each channel over 10.
5. For separate Frequency trim adjustment on each channel add the latter "Y" after Model No. and $25 per channel.

5 MHz to 90 MHz
SINE WAVE
MODEL MH-211A
2 to 12 CHANNELS
HIGH STABILITY



SPECIFICATIONS:

Frequency Range: 5 MHz to 90 MHz over any 25% bandwidth.
(Note: Wider bandwidths and other frequency ranges can be supplied on special order)

Frequency Stability Over Temperature Range: $\pm 5 \times 10^{-7}$

Temperature Range: +10°C to +50°C

Short Term Stability:
$\pm 5 \times 10^{-9}$ per 15 milliseconds

Long Term Stability:
$\pm 1 \times 10^{-7}$ per day at constant ambient

Output Power:
1 milliwatt min. into a 50 ohm load

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Input Voltage: +28V DC ±2%

Input Current: 600 ma. maximum

Automatic Gain Control is Incorporated for Minimum Aging

Size: 3.32 x 3.88 x 4.0″ (L-W-H)
84.33 x 98.55 x 101.60 mm

Connector: BNC; 8 Pin turret lug header for +28V DC

Mounting: 4 threaded inserts

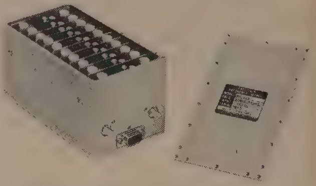
Separate Frequency Adjustment for Each Channel

PRICE: 1-3 units — $990.00 each
10 channels

ORDERING INFORMATION:

1. Specify Model MH-211A.
2. State number of channels and exact output frequencies desired.
3. Subtract $20 for each channel under 10.
4. Add $40 for each channel over 10.

12 MHz to 125 MHz
SINE WAVE
MODEL MH-278
4 to 10 CHANNELS
HIGH STABILITY



SPECIFICATIONS:

Frequency Range: 4 to 10 channels in the range of 12 MHz to 125 MHz

Frequency Stability Over Temperature Range: $\pm 1 \times 10^{-6}$

Temperature Range: 0°C to +50°C

Output:
5 mw minimum into a 50 ohm load (primary)
0.5 mw minimum into a 50 ohm load (monitor)

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Input Voltage: +28V DC ±2%

Input Current: 2 amps at turn-on, 500 ma. at +25°C

No Intermodulation Between Channels; Only One Channel is Active at a Time

Switching Time: Less than 20 milliseconds (output frequency accuracy: ±10 ppm)

Switching Code:
4 wire BCD. (Example: Channel 5 requires a code of 0101.)
Logic "0" = 0 ±.4V, Logic "1" = +2.4 to +5.5V

Size: 6.04 x 3.25 x 3.25″ (L-W-H)
153.42 x 82.55 x 82.55 mm

Connectors:
Cannon DEM-9P-A-106 and 2-SMA

Each Channel Incorporates a Center Frequency Adjustment

PRICE: 1-3 units — $1090.00 each
4 channels

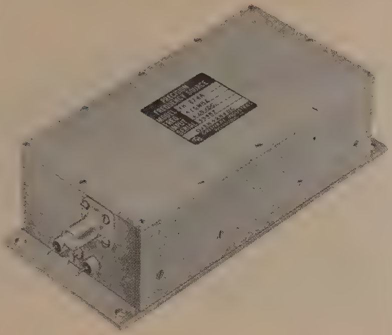
ORDERING INFORMATION:

1. Specify Model MH-278.
2. Specify number of channels and exact output frequencies desired.
3. Add $165.00 per channel for each channel over 4.
4. Additional plug-in boards: $195.00 ea.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

MULTIPLE FREQUENCY OSCILLATORS

10 MHz to 150 MHz
SINE WAVE
MODEL YL-221
PHASE LOCKED FREQUENCY SOURCE



SPECIFICATIONS:

Input Frequency: 5 MHz

Input Power: 0 dbm minimum into a 50 ohm load

Output Frequency:
Model YL-221A: 10 MHz to 80 MHz at the following frequency multiples of 5 MHz: X2, X4, X5, X8, X10 and X16
Model YL-221B: 10 MHz to 150 MHz at integer frequency multiples at 5 MHz not included above

Input Power: 0 dBm minimum into a 50 ohm load

Output: Sine wave, Harmonics and Sub-Harmonics −40 dB min.; Spurious −60 dB min.

Input Voltages: +28V DC ±2% and +5V DC ±2%

Input Current: 650 ma. maximum at +28V DC 50 ma. maximum at +5V DC

Temperature Range: 0°C to +50°C

Connector: 2-SMA, (input and output); Filtercons for +28V DC and +5V DC

Size: Model YL-221A: 6.0 x 3.0 x 3.0″* (L-W-H), 152.4 x 76.2 x 76.2 mm
Model YL-221B: 6.0 x 6.0 x 3.0″* (L-W-H), 152.4 x 152.4 x 76.2 mm
*Add 1″ (25.4 mm) to length for flanges.

PRICE: 1-3 units — Model YL-221A: From $550.00 each
Model YL-221B: From 950.00 each

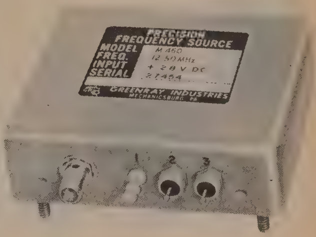
OPTIONS AVAILABLE:

Output frequencies that are non integer multiples of 5 MHz that can be expressed as: $\frac{n}{m}$ x 5 MHz; where "n" and "m" are integers (Example: 51.167 MHz)

ORDERING INFORMATION:

Consult factory for a quotation to your exact requirements.

10 MHz to 150 MHz
SINE WAVE
MODEL M-460
TWO CHANNELS ELECTRONIC SWITCHING



SPECIFICATIONS:

Frequency Range: 10 MHz to 150 MHz

Frequency Stability Over Temperature Range: ±.003%

Temperature Range: 0°C to +50°C

Output Power:
0 dBm minimum into a 50 ohm load

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Input Voltage: +12V DC ±2%

Input Current: 75 ma. maximum

Size: 2.56 x 2.94 x .88″ (W-L-H)
65.02 x 74.68 x 22.35 mm

Any Two Frequencies may be Selected in the Range of 1 MHz to 150 MHz
Example: F1 = 14 MHz
F2 = 132.6 MHz

Output F1 is selected by applying 0V to the control pin.

Output F2 is selected by applying +5V to the control pin.

Switching Time: Less than 10 msec.

Isolation: Infinite (only one oscillator is active at a time)

Connector: SMA; Filtercons for +12V DC

PRICE: 1-3 units — $490.00 each

ORDERING INFORMATION:

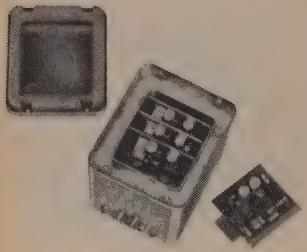
Specify Model M-460 and exact output frequencies desired.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

GRI **Greenray Industries, Inc.**

MULTIPLE FREQUENCY OSCILLATORS

1 MHz to 150 MHz
SINE WAVE
MODEL MH-260 & M-405
4 CHANNELS
PLUG-IN BOARDS



SPECIFICATIONS:

Frequency Range:
4 channels of any frequency in the range of 1 MHz to 150 MHz

Stability Over Temperature Range:
Model MH-260: ±2 x 10^{-6}
Model M-405: ±2 x 10^{-5}

Temperature Range: 0°C to +50°C

Output Power:
1 milliwatt minimum into a 50 ohm load

Output: Sine wave, Harmonics −20 dB minimum; Spurious −60 dB minimum

Input Voltage: +28V DC ±2%

Input Current:
Model MH-260: 800 ma. maximum
Model M-405: 50 ma. maximum

Frequency Selection: Desired Frequency is selected by applying +28V DC to the proper input terminal. This unit is designed to operate one channel only at a given time

Size: 3.5 x 4 x 4″ (L-W-H)
88.9 x 101.6 x 101.6 mm

Mounting: 4 threaded inserts

Connector: SMA; Filtercons for +28V DC

Frequency Adjustment: Each channel has a separate frequency adjustment

PRICE: 1-3 units

Model MH-260	$970.00 each
Model M-405	750.00 each
Additional Plug-in Boards (specify frequency)	195.00 each

ORDERING INFORMATION:

1. Specify Model MH-260 or Model M-405.
2. Specify the 4 frequencies desired.

5 MHz to 100 MHz
SINE WAVE
MODEL M-457
LOW PHASE NOISE FREQUENCY SYNTHESIZER
30% BANDWIDTH

PHASE LOCK
STEPPABLE FREQUENCY SYNTHESIZER
MODEL-M-457
GREENRAY INDUSTRIES, INC.
MECHANICSBURG, PENNA.
POWER

SPECIFICATIONS:

Frequency Range: 5 MHz to 100 MHz over any 30% bandwidth

Frequency Stability: Phase locked to external 5 MHz frequency standard (requires 0 dbm minimum into a 50 ohm load)

Temperature Range: −40°C to +50°C

Output Power: +10 dBm minimum into a 50 ohm load

Output: Sine wave, Harmonics and Spurious −50 dB minimum

Input Voltage: 105-125V AC 55-65 Hz

Minimum Channel Spacing: 50 kHz to 500 kHz (depending on frequency range)

Connector: TNC

Size: 19.0 x 5.25 x 17.0″ (L-H-D) (rack mounting), 482.60 x 133.35 x 431.80 mm

Typical Phase Noise at 75 MHz

SSB Phase Noise in a 1 Hz Bandwidth*

30 Hz	−86 dB	100 kHz	−108 dB
100 Hz	−86 dB	300 kHz	−124 dB
1 kHz	−90 dB	600 kHz	−124 dB
10 kHz	−91 dB		

*Typical readings 6 to 10 dB better.

PRICE: 1-3 units — from $2500.00 each

OPTIONS AVAILABLE:

1. +28V DC input voltage
2. Internal frequency standard
3. Wider bandwidth
4. Narrower channel spacing
5. Militarized versions

ORDERING INFORMATION:

Consult factory for a quotation to your exact requirements.

840 West Church Road, Mechanicsburg, Pa. Phone: 717-766-0223 TWX: 510-650-4939

Greenray Industries, Inc.

AMPLIFIERS AND MULTIPLIER/AMPLIFIERS

Greenray Industries, Inc. manufactures a complete line of power amplifiers. All of the units shown in this section operate Class "C." Therefore, the output power will not vary linearly with the input power. In applications where Class "A" or "B" is required we will be happy to provide a quotation on your exact requirements. Where requirements for amplifiers and multipliers with outputs above 600 MHz exist write or call for our latest microwave catalog.

CAUTION: (For amplifiers with more than 250 milliwatts rated output.)

Operating power amplifiers without a 50 ohm load can cause severe damage (even if only for a few seconds). This also voids our one year warranty.

We highly recommend an Isolator be used in series with the output line to eliminate this hazard.

When load VSWR exceeds 1.5:1 an output isolator is required.

VOLTAGE POLARITY: All amplifiers are protected against accidental input voltage polarity reversal. All units operate from positive supply, with negative ground.

OUTPUT POWER INTO A 50 OHM LOAD

Output Power: 1 watt minimum

Input and Output Impedance: 50 ohms

Load VSWR: 1.5:1 maximum

Harmonics: −20 dB minimum

Class C Operation

Temperature Range: 0°C to +50°C

Input Voltage: +28V DC ±2%

Input Current: 300 ma. maximum

Connectors: 2-SMA (input and output); Filtercons for +28V DC

Size: 4.0 x 2.0 x 2.0″ (L-W-H)
101.6 x 50.8 x 50.8 mm

NOTE: Add 1″ (25.4 mm) to length for flanges.

FREQUENCY RANGE:	PRICE: 1-3 units
10 MHz to 100 MHz	$380.00 each
100.1 MHz to 300 MHz	460.00 each
300.1 MHz to 600 MHz	540.00 each

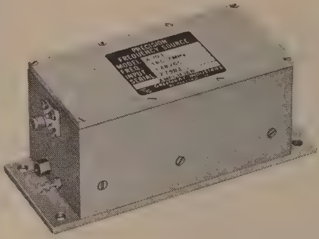
ORDERING INFORMATION:

Specify Model A-100 and exact center frequency desired.

Higher Power Units Up To 100 Watts Are Available Or We Will Custom Build To Your Requirements. Call Us!

10 MHz to 600 MHz 100 mw OUTPUT AMPLIFIER

MODEL A-103



SPECIFICATIONS:

Frequency Range: 10 MHz to 600 MHz

Bandwidth: ±1%

Input Power: 1 milliwatt minimum

Output Power: 100 milliwatts minimum

Input and Output Impedance: 50 ohms

Load VSWR: 1.5:1 maximum

Harmonics: −20 dB minimum

Class C Operation

Temperature Range: 0°C to +50°C

Input Voltage: +28V DC ±2%

Input Current: 150 ma. maximum

Connectors: 2-SMA (input and output); Filtercons for +28V DC

Size: 4.0 x 2.0 x 2.0″ (L-W-H)
101.6 x 50.8 x 50.8 mm

NOTE: Add 1″ (25.4 mm) to length for flanges.

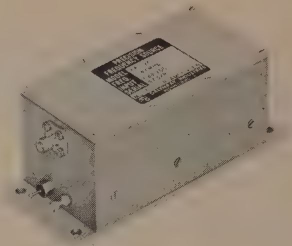
FREQUENCY RANGE:	PRICE: 1-3 units
10 MHz to 100 MHz	$240.00 each
100.1 MHz to 300 MHz	300.00 each
300.1 MHz to 600 MHz	380.00 each

ORDERING INFORMATION:

Specify Model A-103 and exact center frequency desired.

2 MHz to 600 MHz X2/X3/X4/X6 MULTIPLIER

MODEL XA-100, XA-101, XA-102 & XA-103



SPECIFICATIONS:

Output Frequency: 2 MHz to 600 MHz

Input Frequency Range: 1 MHz to 300 MHz

Multiplication: X2 Specify Model XA-100
X3 Specify Model XA-101
X4 Specify Model XA-102
X6 Specify Model XA-103

Input Power: 1 milliwatt minimum

Output Power: 5 milliwatts minimum

Class C Operation

Bandwidth: ±1%

Input and Output Impedance: 50 ohms

Output: Sine wave, Harmonics and Sub-Harmonics −20 dB minimum

Input Voltage: +28V DC

Input Current: 75 ma. maximum

Connectors: 2-SMA (input and output); Filtercons for +28V DC

Size: 4 x 2 x 2″ (L-W-H)
101.6 x 50.8 x 50.8 mm

NOTE: Add 1″ (25.4 mm) to length for flanges.

Harmonics and Sub-Harmonics −40 dB Suffix Model No. with "X" and add $40 to price. (Example: Model XA-100X.)

Harmonic and Sub-Harmonics rejection to −60 dB is available, consult factory.

MODEL NO.	PRICE: 1-3 units
XA-100	$280.00 each
XA-101	330.00 each
XA-102	370.00 each
XA-103	420.00 each

ORDERING INFORMATION:

Specify Model No. and exact input and output frequencies desired.

HUGHES
FREQUENCY CONTROL DEVICES

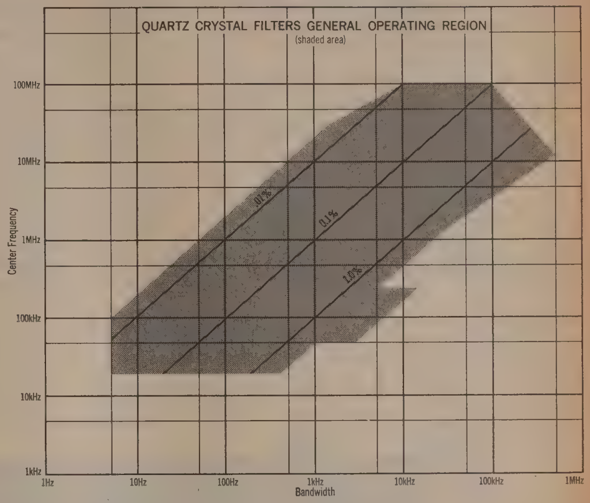
CRYSTAL FILTERS

As the nation's leading supplier of precision crystal filters, Hughes offers years of technical experience backed by the industry's most advanced production and test facilities. Thousands of Hughes crystal filters are currently in use in missiles, space vehicles, radar systems and communications equipment. Available in various frequencies, sizes and environmental standards, Hughes filter types include bandpass, single sideband, band rejection, contiguous comb doppler and thin-film monolithic.

Bandpass & Single Sideband Filters. Narrow passbands, steep shape factors and low insertion losses are characteristic of all Hughes bandpass and single sideband filters. General specifications include:

Center Frequency Range	250kHz to 100MHz
Fractional Bandwidth Range	0.002% to 6%
Shape Factor (60 db/3 db ratio)	As low as 1.15 to 1
Insertion Loss	Down to 0.1 db
Passband Ripple	Down to ±0.1 db

Note: Refer to the General Operating Regions Chart (right) to determine producible design combinations of bandwidth and center frequency.

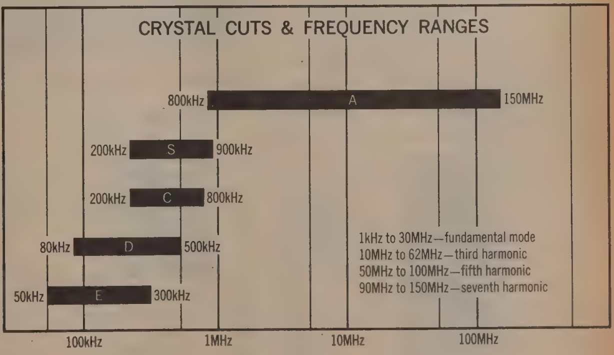


QUARTZ CRYSTALS

Hughes supplies a full range of low and high frequency quartz crystals from 250kHz up to 150MHz. Both standard and custom units in prototype or production quantities can be supplied for a variety of precision, frequency control applications.

Military Standard Crystals. Manufactured to MIL-C-3098E, Hughes military standard quartz crystal units are offered in a full range of low and high frequencies.

Coldweld Sealed Crystals. For applications requiring exceptionally high reliability and long term frequency stability, Hughes employs the Coldweld process for hermetically sealing the crystal enclosure. Only pressure is used in welding the cover to the base, thereby eliminating all possibility of contamination from fluxes, sparking or heating. Hughes Coldweld quartz crystals are available in 250kHz to 150MHz frequencies and in TO-5, HC-6 or HC-18 Coldweld holders.



Hughes is the country's leading supplier of precision crystal filters and related frequency control devices. A partial list of major programs using these products includes BMEWS, Apollo, Pioneer, Syncom, Surveyor, Mauler, Hawk, Minuteman, Talos, Phoenix and Standard Missile. A staff of competent engineers backed by the industry's most advanced quality control and test facilities, stands ready to handle your toughest assignment. Call collect or contact your nearest Hughes representative for assistance.

Low Frequency Crystals

70 KHz – 999 KHz

On this page we present our four most popular crystal mountings and the data for the crystals available in these mountings according to the various frequency ranges.

mode of oscillation
70-184 KHz Length shear 5°X
185-599 KHz Edge shear CT & DT
600-999 KHz shear AT

shunt capacitance 7 pf (Max.)
70-200 KHz 10000- 7000 ohms
200-500 KHz 6500-11000 ohms
800-999 KHz 625 ohms

drive (Max.)
70-499 KHz 2 milliwatts
500-999 KHz 10 milliwatts

REMEMBER: Just any crystal and just any oscillator will not combine to produce designated spot frequencies.

DESCRIPTION AND DATA: All of these crystals are of the plated, wire-mounted type. Low drift AT-cut blanks are used in these units above 600 KHz, and low drift CT cut blanks are used in units below 600 KHz; any crystal can be supplied for operation with or without an oven.

TYPE SPECIFICATIONS

1. **General Purpose** (GP) crystals will be calibrated to within ±.02% of frequency when operated into the customers specified fundamental load capacitance only (32 pf will be used when none is specified). **GP crystals 500-999 KHz will hold temperature tolerance of ±.005% from —30° to 60°C and ±.02% for frequencies below 500 KHz.**
2. **Commercial Standard** (CS) crystals will be calibrated as noted below, as specified for operation in customers load. CS crystals will hold temperature tolerance ±.003% —30° to 60°C above 500 KHz and ±.02% below 500 KHz.

CIRCUIT: As specified by customer. Crystals are available for all major two-way equipment and in most cases the necessary correlation data is on file. Where circuit is not specified, the crystal will be calibrated for operation into a load capacitance of 32 mmf.

The CS series of crystal units is available to commercial or military specifications demanding tight frequency tolerance, long term stability and low frequency response.

WHEN ORDERING — SPECIFY THE FOLLOWING FOR EACH CRYSTAL

- **A.** Crystal frequency
- **B.** Type GP or CS
- **C.** Calibration temperature (Room temperature or over 60°C)
- **D.** Holder (see below)
- **E.** Circuit load and correlation data.

Note: For GP specify 10, 20 or 32 pf. Do not specify equipment types in the case of GP crystals. These are made only to 10, 20 or 32 pf load. When circuilt load is not specified crystals will be correlated for a 32 pf load.

Medium Frequency Crystals

1,000 KHz – 22,000 KHz

FUNDAMENTAL TYPE

TYPE SPECIFICATIONS

1. **GENERAL PURPOSE** (GP) crystals will be calibrated to within ±.01% of frequency when operated into 10, 20 or 32 pf load capacitance only (32 pf will be used when none is specified.)
   GP crystals will hold temperature tolerance of ±.005% from —30° to 60°C.
2. **COMMERCIAL STANDARD** (CS) crystals will be calibrated to either .0025% or .001% as specified for operation in customer's load. CS crystal will hold temperature tolerance ±.003% —30° to 60°C.
3. A calibration tolerance of ±.001 (or special) can only be obtained when a definite circuit load capacitance and drive level are specified. Where a definite load capacitance is not specified and correlation is required from a copy of the intended circuit a tolerance of ±.01%, should be expected.
4. **HIGH ACCURACY** (HA) crystals are for use in circuits where tolerances better than ±.002% —30° to 60°C are required. Tolerances of .0005% over the range —30° to 60°C will require circuit compensation. Without compensation the range will be limited to —10° to 60°C. Compensators are not included with the crystals and tolerance is for crystals only and does not allow for any change in circuit parameters over the temperature range.

mode of oscillation

High Frequency Crystals

10 MHz – 160 MHz

Crystals for use in military equipment can be supplied to conform to specifications of MIL-C-3098E

MODE OF OSCILLATION

10- 60 MHz	Shear third mechanical overtone AT
61-100 MHz	Shear fifth mechanical overtone AT
111-140 MHz	Shear seventh mechanical overtone AT
141-160 MHz	Shear ninth mechanical overtone AT
Shunt Capacitance	7 pf (Max.)

RESISTANCE (Max.)

10- 14.9 MHz	60 ohms
15- 60 MHz	40 ohms
60-110 MHz	60 ohms
110-140 MHz	80 ohms
140-160 MHz	100 ohms
Drive (Max.)	2 milliwatts

TYPE SPECIFICATIONS

1. **General Purpose** (GP) crystals will be calibrated to within ±.01% of frequency when operated into the customer's specified circuit load only. When none is specified series resonance will be used.
   GP overtone crystals will hold temperature tolerance of ±.005% from —30° to 60°C.
2. **Commercial Standard** (CS) crystals will be calibrated to either .0025% or .001% as specified for operation in customer's load. CS crystal will hold temperature ±.003% —30° to 60°C.
3. A calibration tolerance of ±.001% (or special) can only be obtained when a definite circuit load and drive level are specified. Where a definite load is not specified and correlation is required from a copy of the intended circuit a tolerance of .01% should be expected.
4. **High Accuracy** (HA) crystals are for use in circuits where tolerances better than ±.002% —30° to 60°C are required. Tolerances of .0005% over the range —30° to 60°C will require circuit compensation. Without compensation the range will be limited to —10° to 60°C. Compensators are not included with the crystals and tolerance is for crystals only and does not allow for any change in circuit parameters over the temperature range.

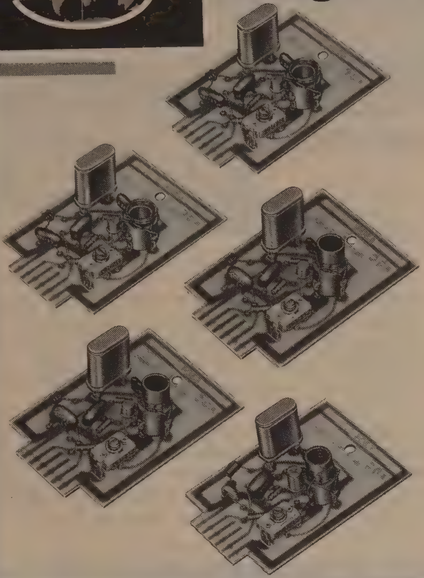
Plug-in Transistor Oscillators

direct crystal control to 160 MHz

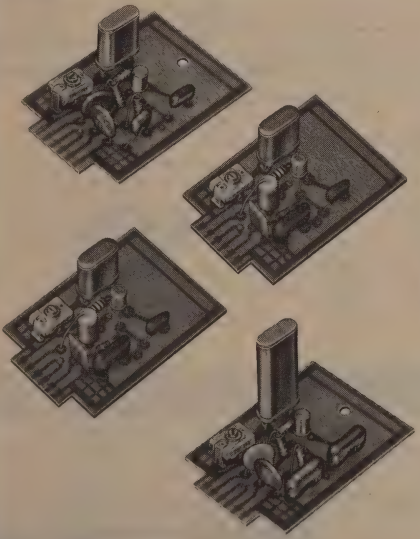


HIGH FREQUENCY (20 MHz — 160 MHz)

- Signal Generators For Receiver Alignment
- Quick-Change Plug-In Oscillators

Five transistor oscillators covering 20 MHz - 160 MHz. Standard 77°F calibration tolerance ±.0025%. The frequency tolerance is ±.0035%. Oscillator output is .2 volts (min.) across 51 ohms. Power requirement: 9 vdc @ 10 ma. max.

Oscillator Type	Oscillator Range	Temperature Tol. —40°F to 150°F	Oscillator (Less Crystal) Price
OT-124	20- 40 MHz	±.0035%	$7.00
OT-146	40- 60 MHz	±.0035%	7.00
OT-161	60-100 MHz	±.0035%	7.00
OT-1140	100-140 MHz	±.0035%	7.00
OT-1160	125-160 MHz	±.0035%	7.00



LOW FREQUENCY (70 KHz — 20,000 KHz)

- Band Edge Markers
- Frequency Markers For Oscilloscopes
- Portable Signal Standards
- Accessory Cases

Four transistor oscillators covering 70 KHz - 20,000 KHz. Trimmer capacitor for zeroing crystal. When oscillator is ordered with crystal the standard will be ±.0025%. Oscillator output is 1 volt (min.) across 470 ohms. Power requirement: 9 vdc @ 10 ma. max.

Oscillator Type	Oscillator Range	Temperature Tol. —40°F to +150°F	Oscillator (Less Crystal) Price
OT-11	70-150KHz	±.015%	$7.00
OT-12A	150-400KHz	200-600KHz±.01%	7.00
OT-12	400-5,000KHz	600-5,000KHz±.0035%	7.00
OT-13	2,000-12,000KHz	±.0035%	7.00
OT-14	10,000-20,000KHz	±.0035%	7.00

Oscillators–Amplifiers

BROADBAND AMPLIFIER

MODEL 150-299

14 DB GAIN — 10 to 1,000 MHz

BROADBAND AMPLIFIER
150-299
10 to 1000 MHz
OUTPUT
INPUT
+20vdc

International's inline amplifier provides 14 db gain flat within 1 db over a range of 10 to 1,000 MHz. Impedance 50 phms. Requires 20 VDC @ 50 ma. For increased gain additional amplifier may be added. Uses BNC type terminals.

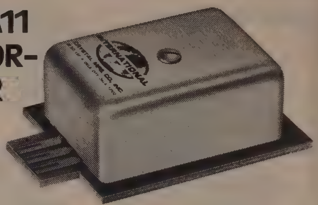
SPECIFICATIONS

Range 10 to 1,000 MHz
Impedance 50 ohms
DC Input* 20 VDC 50 ma
Gain** 14 db
Flatness ±1db (Ref. 500 MHz)
Operating Temperatures −25 to +70°C
Noise Figure 9 db
VSWR Output 2.0
Output capability for −60 db near intermodulation distortion 100 MV

*Will operate 12 to 24 VDC with some loss characteristics.
**May cascade for additional gain with consideration of noise and flatness.

PRICE $40.00

OA10 & OA11 OSCILLATOR-AMPLIFIER



OA series of "oscillator-amplifier" units provide signal sources where greater power output is required. Available with either 50 ohm or 10K ohm output impedance over the frequency range of 6 MHz to 60 MHz. The OA-10 has a tuned output and the OA-11 has a broadband untuned output. Standard input voltage in 9 VDC. *Modification −01 provides for operation from 30 VDC. †Two temperature tolerances are available over the range −10°C to + 60°C. Specify frequency when ordering. Output into 50 ohms, 1 volt/rms min. for OA-10.

TYPE	†ACCURACY	PRICE
OA–10*	.002%	$50.00
OA–10*	.0005%	$65.00
OA–11*	.002%	$50.00
OA–11*	.0005%	$65.00

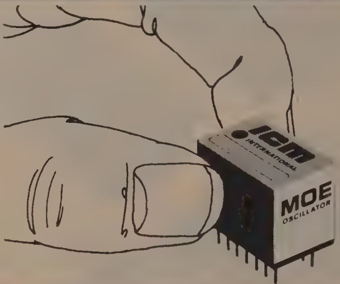
*Mod–01 30 VDC operation add $15.00

MOE CRYSTAL OSCILLATOR

elements provide a complete controlled signal source from 600 KHz to 60 MHz

The MOE series is designed for direct plug-in to a standard dip socket. The miniature oscillator element in a complete source, crystal controlled, in an integrated circuit 14 pin dual-in-line package with a height of .6 inches, width .5 inches and length .8 inches.

Oscillators are grouped by frequency and temperature stability thus giving the user a selection of the overall accuracy desired. Operating voltage 6 vdc.



SPECIFICATIONS

DC Input	6 VDC @ 10ma max
RF Output	−10 dbm (periodic)
Output Impedance	Low, 100 ohms
Freq. Stability (−10°C to +60°C)	MOE −5 ±.002% MOE −10 ±.0005%
Calibration	±1ppm at 25°C

TYPE	CRYSTAL RANGE	OVERALL ACCURACY	25°C TOLERANCE	PRICE
MOE–5	6MHz to 60MHz	+ .002% −10° to +60°C	Zero Trimmer	$35.00
MOE–10	6MHz to 60MHz	+ .0005% −10° to +60°C	Zero Trimmer	$50.00

McCOY ELECTRONICS COMPANY

a subsidiary of **OAK Industries Inc.**

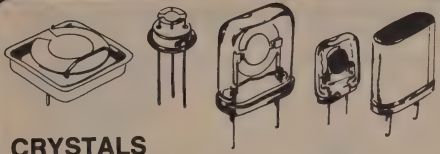
MT. HOLLY SPRINGS, PA. 17065 • 717-486-3411 - TWX: 510-650-3548

Nearly a quarter century of dedication to **Quartz Crystals, Filters,** and **Oscillators** has earned McCoy Electronics Company the foremost reputation for performance. McCoy's achievements have provided the base for extensive domestic sales representation and worldwide distribution. The versatility of design and capability in McCoy's precision components has placed them in the vanguard of not only the commercial and industrial crystal market, but also NASA's aerospace programs and computer systems for communication and defense, thus exemplifying the esteem accorded the McCoy product line.

McCoy customer service has grown in unison with the rapidly expanding McCoy technology. An additional plant facility now supplements the present vast engineering, manufacturing, and distribution capability—the foundation of the McCoy Company reputation. The unequaled versatility of custom manufacturing and resultant customer confidence are enhanced with ever increasing efficiency by our computer assisted design capability. Laboratory trial and error efforts are eliminated through the accurate analyses and directions provided by the computer.

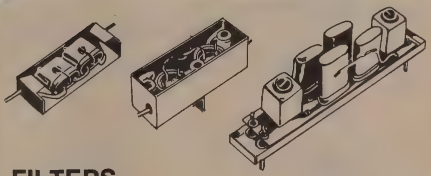
The McCoy name has been synonymous with quality in the crystal industry for more than two decades. Our catalog contains crystals, filters, and oscillators continually proven to be the ultimate in performance critique. The various components listed herein are supported by PC Board, chemical milling, and other photo-fabrication capabilities, and represent only a small cross section of products and services offered. Our many years of experience assure each customer that the industry's finest skills are at his command.

"ADVANCING CRYSTAL TECHNOLOGY FOR TWO DECADES"



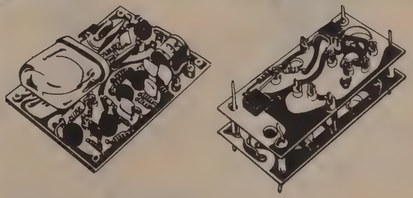
CRYSTALS

McCoy's leadership in crystal design and production permits precision blanks from 700 Hz to 250 MHz to be cut, angles controlled to within ±15", and fundamental frequencies lapped to 45 MHz. Thousands of electrode masks, permitting maximum latitude in controlling motional parameters, give range and depth to McCoy's crystal capabilities.



FILTERS

Crystal filters from 1KHz to 250MHz are designed by computer assistance to exacting specifications. Monolithic filters, with spurious mode suppression capabilities, offer an infinite variety of designs for custom application.



OSCILLATORS

The precision standard, oven, temperature compensated (TCXO) and voltage controlled (VCXO) crystal oscillators each feature a matched McCoy crystal. Coupled with the McCoy expertise in manufacturing smooth discontinuity-free crystals, these oscillators offer unequaled performance when tailored to blend with the equipment or system needs.

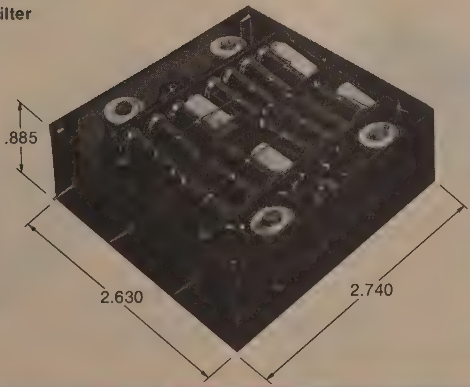
3db BW ±150 KHz min.
60db BW ±925 KHz max.
Transmission Loss: 14db max.
Ripple: 3db max.
Ultimate Attenuation: 60db min.
Temperature Range: −40° to +85° C
Transfer Impedance: 6500 Ω ±20%

Single Sideband Filter
MODEL 20B110
F_o 1.750 MHz



SPECIFICATIONS

Package FM 2871
BW min. @ 1db F_o +295Hz to F_o +3100Hz
BW max. @60db F_o −125Hz to F_o +3975Hz
Insertion Loss: 5db max.
Ripple: 1db max. over 1db BW
Temperature Range: −40° to +70° C
Intermodulation Distortion Levels: At least 65db below two equal level (100mv.) signals, F_o +900Hz and F_o +2800Hz, applied simultaneously
Source/Load Impedance: 500 Ω
Shock: MIL-STD-202, Method 205, Test Conditions set forth in para 4.8.11.1 of MIL-F-39025
Vibration: MIL-STD-202, Method 204A, Test Condition A
Carrier Attenuation: @ F_o 40db min.
Differential Delay: 400 ms. max. over the band defined from F_o +800 Hz to F_o +3050 Hz

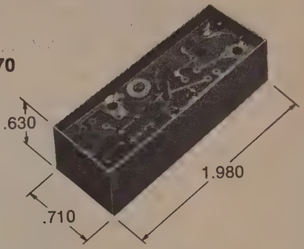
McCOY CRYSTAL FILTERS

Filter
MODEL 2B270
F_o 20.000 MHz

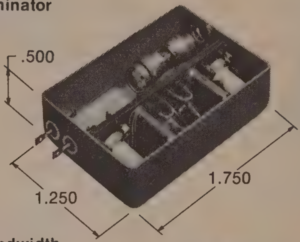


Unique design for airborne communications features immediate identification of failure mode of any defective component.

SPECIFICATIONS

Package FM 6392
6db BW ±10 KHz min.
60db BW ±15 KHz max.
Insertion Loss: 4db max.
Ripple: 2db max.
Ultimate Attenuation: 90db
Temperature Range: −40° to +85° C
Source/Load Impedance: 1800 Ω
Shock: 50G^S 11ms
Vibration: 10G^S 10-500 Hz

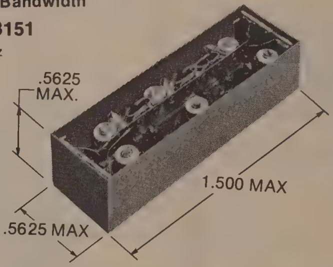
Crystal Discriminator
MODEL 6D1
F_o 11.000 MHz



SPECIFICATIONS

Package D1007
Peak-Peak BW: ±20 KHz
Linear BW: ±15 KHz
Linearity: ±3%
Sensitivity: .75 v/KHz
Driver Source Impedance: 1000 Ω
Discriminator Load Impedance: 75000 Ω
Drive Level: 3VRMS @ F_o
Temperature Range: +10° to +50° C

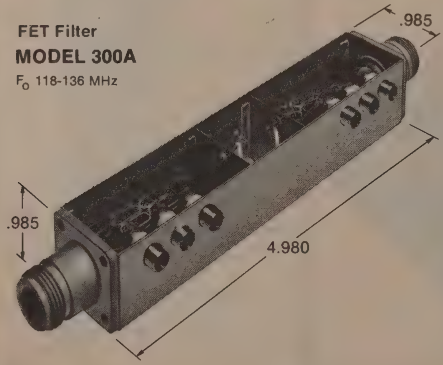
Filter,
Switchable Bandwidth
MODEL 2B151
F_o 30.000 MHz



SPECIFICATIONS

Package FM 2871
Bandwidth A:
  6db ±22.5 KHz min.
  60db 90 KHz max.
Bandwidth B:
  6db ±40 KHz min.
  60db 160 KHz max.
Insertion Loss: 4db max.
Ripple:
  1db max. @ +25° C
  2db max. −55° to +105° C
Ultimate Attenuation: 80db min. F_o
  Bandwidth A
    ±112.5 KHz to ±30 MHz
  Bandwidth B
    ±200 KHz to ±30 MHz
Temperature Range: −55° to +105° C
Source/Load Impedance: 50 Ω
Shock: 15G^S per MIL-STD-202, Method 202
Vibration: MIL-STD-202, Method 201, Test Condition B
Switching Voltage:
  Fixed: +12VDC
  BW A: +24VDC ±1VDC
  BW B: +1VDC ±0.5VDC

FET Filter
MODEL 300A
F_o 118-136 MHz



Eliminates adjacent channel interference and contains amplifier with built in power supply.

SPECIFICATIONS

Package FM 3976
6db BW ±12 KHz min.
60db BW ±35 KHz max.
90db BW ±75 KHz max.
Insertion Loss: 1db max.
Ripple: 2db max.
Ultimate Attenuation: 90db min.
Temperature Range: −40° to +70° C
Source/Load Impedance: 50 Ω
External Supply Required: 10V ±10%

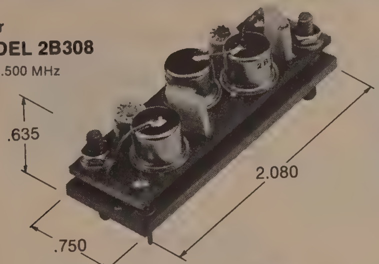
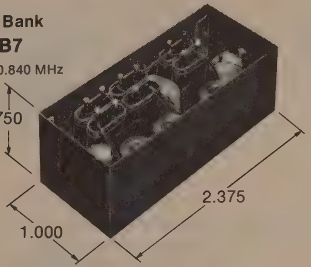
Filter
MODEL 2B308
F_o 25.500 MHz



SPECIFICATIONS

Package FM 7055
6db BW ±34.5 KHz min.
60db BW ±80 KHz max.
Insertion Loss: 5db max.
Ripple: 1db max.
Temperature Range: −55° to +71° C
Source/Load Impedance: 2700 Ω
Shock: 50G^S 11ms
Vibration: 5-500 Hz 10G^S

Filter Comb Bank
MODEL 31B7
F_o 10.000 to 10.840 MHz

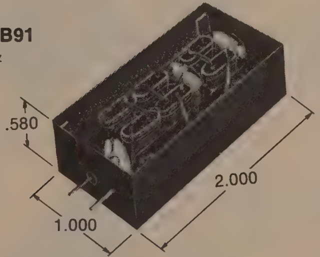


Bank of 15 filters operates from common source and offers 60:6db SF of 2:1

SPECIFICATIONS

Package FM 3318
6db BW ±19 KHz min.
60db BW ±38 KHz max.
Insertion Loss: 16db max.
Ripple: 1db max.
Temperature Range: 0° to +60° C
Source/Load Impedance: 50 Ω
Phase Linearity:
±3° over 50% of the 6db BW
±8° over 80% of the 6db BW

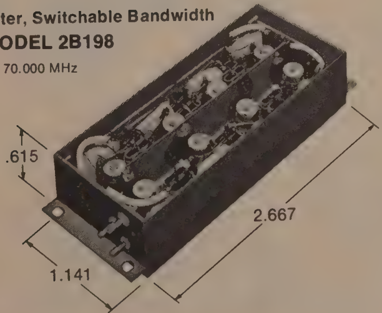
Filter
MODEL 2B91
F_o 9.000 MHz



SPECIFICATIONS

Package FM 2561
3db BW ±6 KHz min. ±7 KHz max.
60db BW 51 KHz max.
Insertion Loss: 6db max.
Ripple: 1db max.
Ultimate Attenuation: 60db min.
Temperature Range: −40° to +70° C
Source Impedance: 450 Ω
Load Impedance: 50 Ω

Filter, Switchable Bandwidth
MODEL 2B198
Fo 70.000 MHz



One of the most innovative creations of the McCoy engineering staff, the switchable dual bandwidth filter is ideal for multi-mode airborne communication systems.

SPECIFICATIONS

Package FM 6360
Bandwidth A:
3db ±35 KHz min.
60db 170 KHz
Bandwidth B:
6db ±19 KHz min.
60db 90 KHz
Insertion Loss: 8db max. (both BWs)
Ripple:
Bandwidth A
1.5db max.
Bandwidth B
1.0db max.
Ultimate Attenuation: from ±200 KHz to ±20 MHz from F_o 80db min.
Temperature Range: −55° to +95° C
Source/Load Impedance: 50 Ω
Shock: 50G^S per MIL-STD-202, Method 202
Vibration: MIL-STD-202, Method 204, Test Condition A
Spurious Response Attenuation: 80db min.
Phase Linearity, BW A only: ±3° over 70% of 3db BW, and ±8° over 90% of 3db BW
Switching Voltage:
Bias Voltage to pin 5: 12VDC
BW A obtained by applying to pin 6: 0-1VDC
BW B obtained by applying to pin 6: 24VDC
Filter will sustain no damage with .5VRMS applied to input.

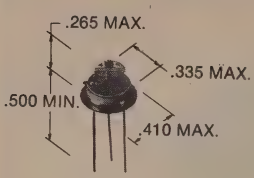
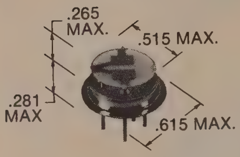
McCOY MONOLITHIC FILTERS



Monolithic Filter
MODEL 48Q2
F_o 156.000 MHz

This illustrates McCoy's high frequency technology in a high performance cold weld seal holder. Rugged and small.

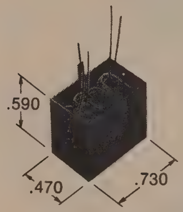
SPECIFICATIONS
Package W-6
3db BW ±7.5 KHz min.
30db BW 54 KHz max.
Insertion Loss: 1db max.
Ripple: .5db max.
Ultimate Attenuation: 40db min.
Temperature Range: −40° to +70° C
Source/Load Impedance: 1500 Ω



Monolithic Filter
MODEL 2Q5
F_o 9.900 MHz

Economical, highly reliable, and rugged - features a cold weld seal.

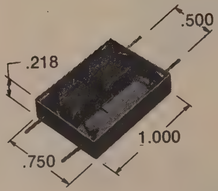
SPECIFICATIONS
Package W-7
3db BW ±400 Hz min.
25db BW 10 KHz max.
40db BW 80 KHz max.
Insertion Loss: 6db max.
Ripple: 1db max.
Temperature Range: −55° to +85° C
Source/Load Impedance: 75 Ω ±10%
Shock: MIL-STD-202, Method 205, Test Condition B
Vibration: MIL-STD-202, Method 204, Test Condition A
Spurious Responses: Within ±80 KHz of 9.9 MHz shall be 40db min.



Monolithic Filter
MODEL 48Q6
F_o 30.000 MHz

Eight (8) pole filter utilizes McCoy's miniature crystals - underscores McCoy's innovative capability in micro-electronics applications.

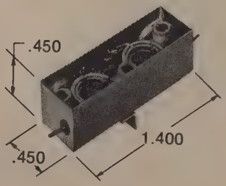
SPECIFICATIONS
Package FM 7027
3db BW ±15 KHz min.
60db BW 60 KHz max.
Insertion Loss: 4db max.
Ripple: 1db max.
Ultimate Attenuation: 70db min.
Temperature Range: −40° to +70° C
Source/Load Impedance: 1500 Ω



Monolithic Filter
MODEL 48Q8
F_o 22.800 MHz

Less than 0.2 cubic inches, this four pole filter offers maximum performance in efficient layout.

SPECIFICATIONS
Package FM 2893
3db BW ±25 KHz min.
40db BW 120 KHz max.
Insertion Loss: 1db max.
Ripple: .5db max.
Ultimate Attenuation: 60db min.
Temperature Range: −40° to +70° C
Source/Load Impedance: 2700 Ω



Monolithic Filter
MODEL 2Q1
F_o 109.350 MHz

Designed for highly reliable, sophisticated, surveillance aircraft, this filter meets exacting electrical and environmental requirements.

SPECIFICATIONS
Package FM 3922
.5db BW ±3 KHz
3db BW 15 KHz min.
20db BW 70 KHz max.
Insertion Loss: 6db max.
Ripple: .5db max.
Ultimate Attenuation: 60db min.
Temperature Range: −55° to +85° C
Intermodulation Distortion: Third or higher order products of a 2 tone signal of 0.1v per tone, measured at the output terminals, do not exceed a level of 50db below each reference tone. Tones are 109.351 and 109.549 MHz.
Source/Load Impedance: 200 Ω
Shock: 15G^S, MIL-STD-202, Method 202
Vibration: MIL-STD-202, Method 204, Test Condition A

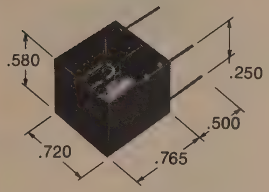
McCOY MONOLITHIC FILTERS



Monolithic Filter

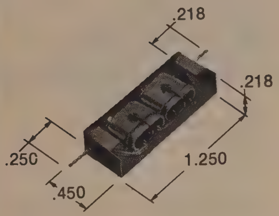
MODEL 48Q5

F_o 75.000 MHz

Popular center frequency range utilizes McCoy's experience in high frequency crystal spurious mode control techniques.

SPECIFICATIONS

Package FM 1058
3db BW ±17.5 KHz min.
30db BW 105 KHz max.
Insertion Loss: 2db max.
Ripple: .5db max.
Ultimate Attenuation: 50db min.
Temperature Range: −40° to +70° C
Source/Load Impedance: 75 Ω



Monolithic Filter

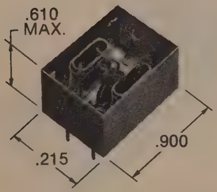
MODEL 48Q3

F_o 11.500 MHz

Quality four pole space saver for miniaturized applications.

SPECIFICATIONS

Package FM 2885
3db BW ±10.5 KHz min.
40db BW 59 KHz max.
Insertion Loss: 2.5db max.
Ripple: 1db max.
Ultimate Attenuation: 60db min.
Temperature Range: −40° to +70° C
Source/Load Impedance: 2700 Ω



Monolithic Filter

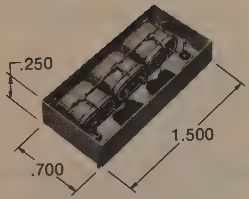
MODEL 12Q11

F_o 21.400 MHz

Small, lightweight four pole filter ideally suited for miniature airborne transceivers.

SPECIFICATIONS

Package FM 7045
6db BW 32 KHz min.
30db BW 72 KHz max.
Insertion Loss: 6db max.
Ripple: 2db max.
Ultimate Attenuation: 70db min.
Temperature Range: −18° to +38° C
Source/Load Impedance: 2200 Ω
Spurious Response Attenuation: 30db min.



Monolithic Filter

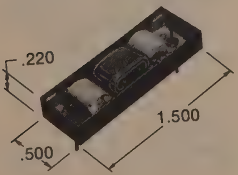
MODEL 2Q4

F_o 24.500 MHz

Features top performance in low profile package and efficient mechanical layout.

SPECIFICATIONS

Package M-20C
6db BW ±10 KHz min.
40db BW ±22 KHz max.
Insertion Loss: 4db max.
Ripple: 1.5db max.
Ultimate Attenuation: 80db min.
Temperature Range: −30° to +70° C
Source/Load Impedance: 1500 Ω
Shock: MIL-STD-202, Method 201
Vibration: MIL-STD-202, Method 205



Monolithic Filters

MODELS 20Q4
1 through 16

F_o 11.000 - 15.000 MHz

Compact filter with termination matched to customer's requirement.

SPECIFICATIONS

Package FM 3919
3db BW ±7 KHz min.
10db BW 32 KHz max.
20db BW 50 KHz max.
Insertion Loss: 2db max.
Ripple: ±1db max.
Ultimate Attenuation: 30db min.
Temperature Range: −40° to +70° C
Source/Load Impedance: 50 Ω
Spurious Response Attenuation: 15db min.

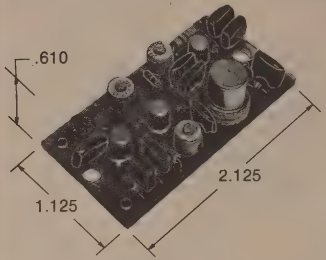
McCOY CRYSTAL OSCILLATORS



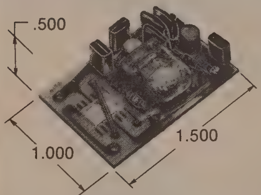
Crystal Controlled Oscillator

MODEL MC308X1

Multi-frequency crystal oscillator designed to allow the user to change frequency by inserting a new crystal and performing a simple retuning process.

SPECIFICATIONS

Frequency Range: 80 MHz to 110 MHz
Frequency Stability vs. Temperature Range (typical choices):
±20 PPM over −20° to +60° C from RT value
±50 PPM over −55° to +85° C from RT value
±100 PPM over −55° to +85° C from RT value
Frequency @RT: Resolution of less than 1 PPM
Input Voltage: +12VDC ±2%
Input Current: 15ma. max.
Output:
7mw. min. into a 50Ω Load, sine wave, (−20° to +60° C)
5mw. min. into a 50Ω Load, sine wave, (−55° to +85° C)
Weight: 2 ounces max.
Mounting: Direct to printed circuit board using 4 wire leads
Package Volume: 1.63 cubic inches nominal
Crystal Type Used: TO-5 (McCoy Type W-6)



NOTE: Where height is critical, order MODEL MC210A1 which is the same as MC209A1 except height of .360 max.

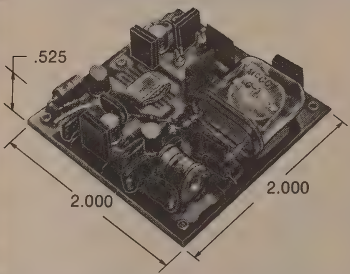
Crystal Controlled Oscillator

MODEL MC209A1

An offshoot of our MC109A1, the MC209A1 is utilized where an extra logic is required, thus obtaining lower output frequencies. It uses all MIL-approved parts where required on government work.

SPECIFICATIONS

Frequency Range: 1.8 KHz to 650 KHz
Frequency Stability vs. Temperature Range (suggested values only):
1.8 KHz to 12 KHz
±150 PPM over −55° to +105° C
± 70 PPM over 0° to +50° C
12 KHz to 650 KHz
± 50 PPM over −55° to +105° C
±100 PPM over −55° to +105° C
± 30 PPM over 0° to +50° C
Input Voltage: +5VDC ±5%
Output: Logic
Seal: Hermetic
Weight: 1.5 ounces max.
Mounting: Direct PC Mount



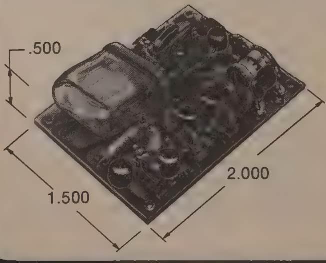
Temperature Compensated Crystal Oscillator

MODEL MC163X2

TCXO Work-horse of the product line covers a wide frequency range of TTL/DTL compatible outputs and can provide outside trim capability.

SPECIFICATIONS

Frequency Range: 8.0 KHz to 28.0 MHz
Frequency Tolerance vs. Temperature Range (typical choices):
±0.5 PPM over −30° to +60° C
±1.0 PPM over −40° to +70° C
±5.0 PPM over −55° to +105° C
Input Voltage: +12VDC ±2% and +5VDC ±5%
Output: TTL/DTL Compatible
Seal: Hermetic
Mounting: Direct printed circuit board using 5 ea. wire leads
Outside Trim: Available on request



Temperature Compensated Crystal Oscillator

MODEL MC380A2

High Stabilities achieved with a single +5VDC input instead of 2 separate inputs.

SPECIFICATIONS

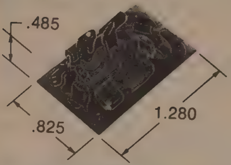
Frequency Range: 187.5 KHz to 25 MHz
Frequency Stability:
±0.5 PPM
±1.0 PPM
±2.0 PPM
±5.0 PPM
Temperature Range:
0° to +50° C
−10° to +70° C
−30° to +70° C
−40° to +85° C
Input Voltage: +5VDC ±1%
Output: TTL/DTL Compatible
Seal: Hermetic
Outside Trim: Available on request (5 PPM total pull)

McCOY ELECTRONICS COMPANY

a subsidiary of OAK Industries Inc.

MT. HOLLY SPRINGS, PA.17065 • 717-486-3411 - TWX: 510-650-3548

McCOY CRYSTAL OSCILLATORS



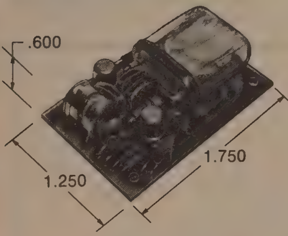
Standard Oscillator

MODEL MC205A1

Compact, rugged unit offers excellent stability for computer applications where performance and reliability are important.

SPECIFICATIONS

Frequency Range: 25 to 50 MHz
Stability: ±20 PPM over 0° to +95° C
Accuracy: @RT ±10 PPM
Input Voltage: +5VDC ±10%
Output: Compatible with TTL and DTL Logic
Seal: Hermetic
Package Size: 1.28 x .825 x .485



Standard Oscillator

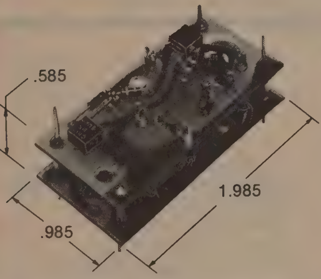
MODEL MC350X1

Versatile, economical crystal oscillator for PC board applications offering frequency trim adjustment and square wave output.

SPECIFICATIONS

Frequency Range: 188 KHz to 25 MHz
Frequency Stability: ±50 PPM
Temperature Range: −55° to +105° C
Frequency Accuracy at 25° C:
 *Units with Trim - ±1 PPM
 *Units without Trim - ±5 PPM
Input Voltage: +5VDC ±5%
Output: Compatible with TTL and DTL Logic
Seal: Hermetic
Weight: Less than 3 ounces
Package Size: 1.25 x 1.75 x .600
Volume: 1.312 cubic inches

*The frequency trim adjustment is optional and should be specified when required.



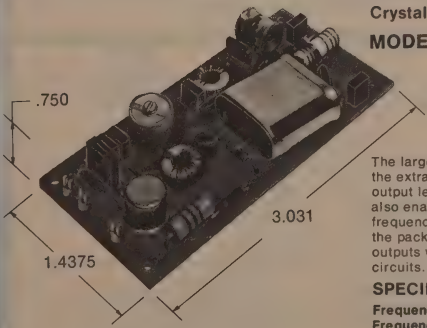
Temperature Compensated Crystal Oscillator

MODEL MC302X2

TCXO designed to provide sine wave outputs up to 85 MHz with minimum package volume.

SPECIFICATIONS

Frequency Range: 12 MHz to 85 MHz
Frequency Tolerance vs. Temperature Range (choose one):
 ±1.0 PPM over −10° to +60° C
 ±5 PPM over −20° to +70° C
 ±10 PPM over −55° to +105° C
Input Voltage: +12VDC ±5%
Output Waveform: sine
Output Power: Typically 5 mw. into a 60 Ω Load
Seal: Hermetic
Weight: Less than 3 ounces
Mounting: Direct to printed circuit board with wire leads out major surface. Also available with studs out major surface and wire leads out side of unit (MC301X2).
Current Drain: 25ma. max.



Crystal Controlled Oscillator

MODEL MC501C1

The larger size of this model allows the extra circuitry to obtain higher output levels (as high as 20mw.). It also enables the use of M-22 lower frequency crystal units to be placed in the package for lower frequency outputs without the use of divider circuits.

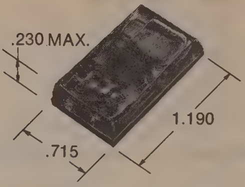
SPECIFICATIONS

Frequency Range: 940 Hz to 160 MHz
Frequency Stability:
 940 Hz to 10 KHz: ±.02%
 10 KHz to 700 KHz: ±.015%
 700 KHz to 160 MHz: ±.005%
Temperature Range: −55° to +85° C
Input Voltage:
 940 Hz to 700 KHz = +5VDC to +28VDC
 700 KHz to 160 MHz = +10VDC to +28VDC
Output Levels:
 940 Hz to 150 KHz: Up to 3VRMS into a 1000 Ω Load with <1% distortion
 150 KHz to 700 KHz: Typically 1VRMS into a 1000 Ω Load
 700 KHz to 160 MHz: Up to 20mw. depending on frequency selection
Output Waveform: sine or square
Seal: Hermetic
Mounting & Termination: Many different versions are available using studs, inserts, solder terminals, and RF connectors
Outside Trim: Available on request

McCOY ELECTRONICS COMPANY

a subsidiary of **OAK Industries Inc.**
MT. HOLLY SPRINGS, PA. 17065 • 717-486-3411 - TWX: 510-650-3548

McCOY CRYSTAL OSCILLATORS



Crystal Controlled Oscillator
MODEL MC1000A1

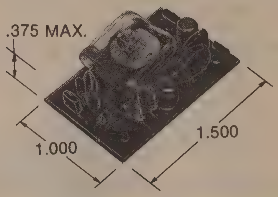
Thick Film, low profile oscillator designed to satisfy small volume designs which must have minimum seated height on printed circuit board or dual-in-line socket.

SPECIFICATIONS

Frequency Range: 188 KHz to 50 MHz

Frequency Tolerance and Temperature Range (customer choice):
±50 PPM over −55° to +105° C
±50 PPM over −40° to +85° C
±50 PPM over 0° to +75° C

Input Voltage: +5VDC ±5%
Output: TTL/DTL Compatible
Seal: Hermetic
Mounting: Printed circuit board or direct plug into a dual-in-line socket
Package Volume: 0.196 cubic inches



Crystal Controlled Oscillator
MODEL MC262X1

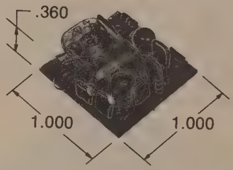
Similar to our MODEL MC110A1, the MC262X1 is used where G-30 or M-28 crystal units are required, due to frequency or low aging rate requirement. It is also used in high shock and vibration requirements and high reliability applications.

SPECIFICATIONS

Frequency Range: 180 KHz to 30 MHz

Frequency Stability vs. Temperature Range (suggested values only):
± 50 PPM over −55° to +105° C
±100 PPM over −55° to +105° C
± 30 PPM over −55° to +105° C
± 50 PPM over 0° to +70° C
± 10 PPM over 0° to +50° C

Input Voltage: +5VDC ±5%
Output: TTL/DTL Compatible
Seal: Hermetic
Weight: 2 ounces max.
Mounting: Direct PC Mount
Current Drain: 10ma. to 50ma. depending on frequency



Crystal Controlled Oscillator
MODEL MC110A1

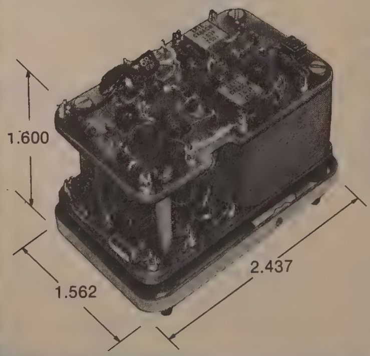
Relatively low cost crystal controlled oscillator designed for commercial or military equipment. Use where space is a problem and height is of prime consideration.

SPECIFICATIONS

Frequency Range: 30 KHz to 55 MHz

Frequency Tolerance vs. Temperature Range (suggested valves only):
30 KHz to 650 KHz
±100 PPM over −55° to +85° C
± 65 PPM over −40° to +70° C
± 50 PPM over 0° to +75° C
650 KHz to 30 MHz
± 70 PPM over −55° to +125° C
± 50 PPM over −55° to +105° C
±100 PPM over −55° to +105° C
30 MHz to 50 MHz
± 50 PPM over −40° to +85° C
± 50 PPM over 0° to +75° C
±100 PPM over −55° to +105° C

Input Voltage: +5VDC ±5% at 10ma. to 50 ma. depending on frequency
Output: TTL/DTL Compatible
Seal: Hermetic
Weight: 1 ounce max.
Mounting: Direct PC Mount
NOTE: Where all MIL-Parts must be used, specify MODEL MC109A1 which is same as MC110A1 except .500 max. height.



Oven Controlled Crystal Oscillator
MODEL MC645X4

Small, stable oven used where the upper ambient must be as high as +90° C.

SPECIFICATIONS

Frequency Range: 2.0 to 25 MHz
Frequency Stability: ±10 PPM over the temperature range
Temperature Range: −55° to +90° C
Input Voltage:
Oscillator: +16VDC ±5%
Oven: +18VDC to +35VDC (select value)

Output Waveshape: sine or square
Output Voltage: 4VP-P ±3db into a 10,000 Ω Load
Outside Trim: Yes, to better than 0.1 PPM of nameplate frequency
Oven Control: Proportional Type Solid State
Oven Power:
6 watts max. at −55° C turn-on and +28VDC input
3.5 watts max. steady state at −55° C and +28VDC input
Warm-up time: 10 minutes at −55° C (unit will be within frequency tolerance over the temperature range.

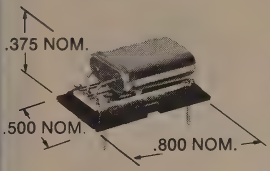
McCOY CRYSTAL OSCILLATORS



Miniature Dip Crystal Clock Oscillator

701/702 SERIES

SPECIFICATIONS

Size:
MC 701A1 -4 Pin Dip Plastic Pkg.
MC 702A1 -14 Pin Dip Plastic Pkg.

Pin Conn:
MC 701A1/MC 702A2 Pin #1 NC
Pin #7 GND
Pin #8 RF Output
Pin #14 +5VDC

Frequency Range:
156 KHz to 25 MHz

Frequency Stability Over Temp:
± 20 PPM, +15 °C to +34 °C
± 50 PPM, 0 °C to +70 °C
± 60 PPM, -40 °C to +85 °C
± 70 PPM, -55 °C to +105 °C

Frequency Calibration @ +25 °C:
± 25 PPM
± 10 PPM (Optional @ Prem.)

Frequency Stability vs. B+ (5.0 VDC) ± 10%:
± 2.0 PPM

Frequency Stability vs. A Load, 1 to 10 Loads:
± 2.0 PPM

Aging vs. Time:
± 5 PPM, 1st Yr. ± 3 PPM/Yr. For Subsequent Yrs.

Symmetry:
40% to 60% Typ., 35% to 65% max.

Risetime:
(.5V to 2.4V): 10 to 25 nsec Value Related to Output Frequency

Fall Time:
(2.4 to .5V): 10 to 25 nsec Value Related to Frequency

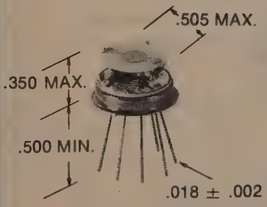
Fanout:
1 to 10^{2}T L Loads
(1 sink = 16.0 ma. max., 1 source = 4 ma. max.)

Output Voltage:
Logic "1": 2.4V min.
Logic "0": 0.4V max.

Input:
+5VDC. ± 10%
2.5 MHz to 25 MHz, 15 ma. typ. (25 ma. max.)
625 KHz to 2.5 MHz, 30 ma. typ. (50 ma. max.)
156 KHz to 625 KHz, 40 ma. typ. (65 ma. max.)

Features: MC701A1:
Utilizes 4 pins to facilitate mounting on PC board solder operation.

MC702A1:
Utilizes 14 Pins for mounting in 14 pin dip socket for maximum engagement under shock and vibration conditions.



Miniature Crystal Clock Oscillator

708 SERIES

SPECIFICATIONS

Frequency Range:
Binary Output: 250 KHz to 4.0 MHz
Straight Thru: 4.0 MHz to 50.0 MHz

Frequency Stability:
± 35 PPM, 0 °C to +75 °C
± 50 PPM, -40 °C to +85 °C
± 70 PPM, -55 °C to +105 °C

Frequency Calibration @ 25° C:
± 15 PPM, 250 KHz to 20 MHz
± 25 PPM, 20 MHz to 50 MHz

Aging @ +25°C:
± 10 PPM, max., 1st Yr.
± 5 PPM, max., Per For Successive Yrs.

Input Power @ +5VDC, ± 5%:
55ma. max., 35ma typ., from 250 KHz to 4.0 MHz
20ma. max., 14ma typ., from 4.0 MHz to 50.0 MHz

Output:
T^{2}L/DTL Compatible

Fan Out:
10T^{2}L Loads, from 250 KHz to 4.0 MHz
6T^{2}L Loads, from 4.0 MHz to 50.0 MHz

Logic Levels:
Logic "0":0.4V max.
Logic "1":2.4V min.

Duty Cycle: Logic "1" @ 1.5V Level:
45% to 55% from 250 KC to 4.0 MHz (Binary)
40% to 60% from 4.0 MHz to 30.0 MHz
35% to 65% from 30.0 MHz to 50.0 MHz

Seal: Cold Weld
Leak Rate: 1 x 10^{-8} ATM CC/SEC

MF CRYSTAL OSCILLATORS

GUARANTEED!

Because of its strict quality control and testing programs,
MF Electronics guarantees that every MF Crystal Oscillator
you purchase will meet or exceed your specifications.
Each oscillator is carefully checked and tested under worst-case conditions
to insure it will function properly for a full year under normal operating conditions.
The individual performance parameters are recorded
and available for study years after the production date.
Because we take care to make them better and test them better,
MF Crystal Oscillators are better for you!

The frequency input voltage characteristics of the 5401 series has been improved to the point that specific frequency accuracy is a complete tolerance, including all effects of temperature, input voltage and initial accuracy.

All unit frequencies are screwdriver adjustable, and there is a choice of 2 case sizes for each set of frequency/stability specifications to match your PC board mounting requirements. Commonly requested frequencies are in stock and available for immediate delivery.

Series 5401 and 5403 oscillators are metal cased, with superior frequency characteristics to the smaller DIP types. Operating from standard 5 volts power, they are used in TTL logic and have a drive capacity of 10 TTL loads. Both series can drive CMOS at 5 volts up to 4 MHz.

The 5401 series differs from the 5403 in that all 5401's are individually temperature compensated with a guaranteed frequency stability of ± 1 ppm at temperatures from 0° to 65° C, while the frequency stability of the 5403's is ± 10 ppm.

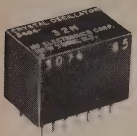
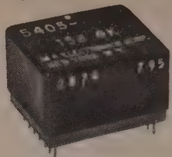
MF GUARANTEED

PLUG-IN CRYSTAL OSCILLATORS • 80 KHz-65 MH



SERIES 5404
5-65 MHz

SERIES 5405
80 KHz-4.99 MHz



Series 5404 crystal oscillators generate a specified frequency from 5 to 65 MHz with an accuracy of ±.005% over a 0 to 65° C temperature range. The 5405 series generates a specified frequency from 80 KHz to 4.99 MHz, with an accuracy of ±.02%. Operating from +5 volts, they deliver outputs for DTL/TTL, and with the use of filters, can provide sine waves. Both units can drive 10 TTL loads. The outstanding aspect of both units is their ability to be plugged directly into sockets. The higher frequency 5404 takes only the socket space of one IC DIP package. The 5405, which generates the lower frequencies, is approximately twice the size of 5404, and occupies the space of two DIP packages, fitting directly into two DIP sockets which are spaced 0.5″ apart. Both units will mate into the Augat High Density Packaging panels (8136).

Common frequencies for the 5405 are 80K, 100K, 200K, 1M and 2 MHz. Common frequencies for the 5404 are 4, 4.9152, 5, 6, 8, 10, 16, 16.384, 20, 24, 30, 32, 40 and 50 MHz.

Note: For new designs, use series 5406 instead of the 5404.

SPECIFICATIONS

	MINIMUM	TYPICAL	MAXIMUM	
Input Voltage	4.75	5.0	5.25	volt
Input Frequency	As specified from 5 to 65 MHz

5406 SERIES

The 5406 oscillator module is in the frequency range of 4 to 50 MHz and is socket-pluggable or may be soldered into a printed circuit board. Operating from +5 volts, it delivers output for DTL/TTL, and with the use of filters can provide sine waves.

5407 SERIES

The 5407 is a controllable-frequency version of the 5406. The exact frequency can be achieved by the tuning of an external capacitor between pins 1 and 2. The adjustable range is at least ±20 ppm when the external capacitor is varied from 0 (open) to 32 pf.

SERIES 5406

The 5406 / 5407 crystal oscillators generate a fixed frequency over a temperature range of 0 to 65°C and –55 to +125°C, depending on dash number, for clock logic or communication frequency generation. For military uses, refer to parts 5408, 5409, 5420 and 5421.

All 5406 / 5407 units fan-out 10 TTL loads. From 4 to 10 MHz, logic is standard TTL; above 10 to 19.9 MHz, logic is high speed TTL. From 20 to 65 MHz, logic is Shottky TTL.

Series	Temperature of Operation	Frequency Accuracy, All Conditions
5406 / 5407	0 to +65°C	±.005% (±50 ppm)
5406-1 / 5407-1	0 to +65°C	±.0025%
5406-2 / 5407-2	–55 to +65°C	±.005%
5406-3 / 5407-3	0 to +85°C	±.005%
5406-4 / 5407-4	0 to +125°C	±.0075%
5406-5 / 5407-5	–55 to +85°C	±.005%
5406-6 / 5407-6	–55 to +125°C	±.0075%

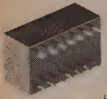
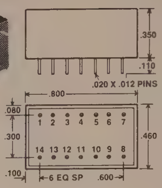
TTL LOGIC CLOCK OSCILLATORS

HERMETICALLY SEALED OR DIALLYL PHTHALATE PACKAGES

Monitor expands its line of TTL logic crystal-controlled oscillators by adding new economy models and offering a wider range of frequencies, stabilities, temperature ranges and availability. There's single and multiple output units for DIP and circuit board mounting. And standard frequencies are available for fast shipment. With delivery like this you don't have to maintain a costly inventory.

968, 969 SERIES / 1-20MHz / MULTIPLE OUTPUT / TTL LOGIC CLOCK OSCILLATORS / DIP 14-PIN PLUG-IN





Frequency Range:	1-20MHz basic frequency (fo)

Set Tolerance: ±50 PPM at +25°C ±5°C (closer stabilities available)
Output: Symmetry 60/40 (when measured between the 1.4V point)
Amplitude: V_{ol} = 0.4V max., V_{oh} = +2.4V min.
Rise/Fall Time: 20 nanoseconds nominal (V_{ol} to V_{oh})
Output Reference: Common pin No. 7
Load: Up to 10 TTL gates (1.6 MA each)

Pin Connections: 7 common, 8 output, 14 +5 V input. All other pins may be internally connected and cannot be used as external tie points.
Connector: TO-116 pin pattern
Material: Nickel silver
Mounting: DIP socket
Environmental: (G07 - G12 only)
Shock: Mil-Std-202D method 213, test condition A
Vibration: Mil-Std-202D method 201, 10G's from 10Hz - 500 Hz
Immersion: Mil-Std-202D method 104A, test condition A
Acceleration: Mil-Std-202D method 212A, test condition A

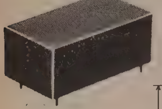
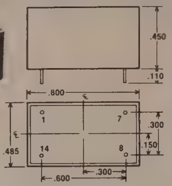
CMOS LOGIC CLOCK OSCILLATORS

Monitor has CMOS! Monitor's new CMOS logic crystal-controlled oscillators are precision clocks with single and multiple outputs for today's CMOS logic applications. The units are complete and ready to plug into a DIP socket or circuit board. Why build them yourself when Monitor can supply standard frequencies at these low prices? And each unit is backed by 48 years of frequency control know-how.

978A SERIES / 3-10MHz / CMOS LOGIC CLOCK OSCILLATORS / 14-PIN DIP COMPATIBLE





Frequency Range:	3-10MHz
*Standard Frequencies:	4.194304MHz (1Hz binary multiple) 3.932160MHz (60Hz binary multiple) 4.096MHz (1MHz binary multiple)
Stability:	±.005%, −40 to +85°C
Normal Calibration:	±.01% @ 25°C ±5°C
Output:	"0" = +.5V Max., "1" = 80% of supply voltage min.
Input:	10-15VDC, 3.0 MA Max.
Operating Temp. Range:	−40 to +85°C
Leads:	.019" dia. gold Dumet pins in 14-pin DIP compatible configuration
Material:	Diallyl Phthalate

PIN CONNECTIONS:
1. Output
7. Common
8. Output
14. + Supply Voltage

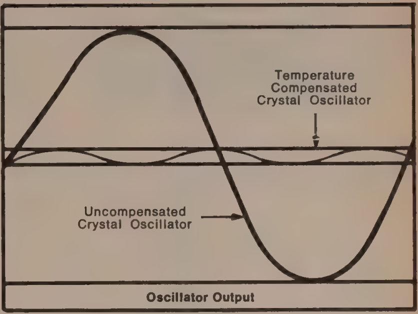
48 Years of Frequency Control Know-How

TCXO TEMPERATURE COMPENSATED OSCILLATORS

Monitor Products, Temperature Compensated Crystal Oscillators assure precise frequency control, in the smallest possible package. The frequency stability vs. temperature range of each TCXO is individually optimized by use of the unique Monitor Products Computer Program. Elimination of oven control requirements greatly enhances reliability while providing high stability with extremely low current drain and zero warm up time. A full range of previously established designs are available including either Sinewave, DTL, TTL, or CMOS compatible outputs. Our TCXO's and TC/VCXO's are widely used in Industrial, Military or Spacebourne environments where high density packaging, low current drain, and maximum reliability are required. Some of our more popular designs available to satisfy your exact needs are listed herein. Please contact us for assistance in fully defining your TCXO or TC/VCXO requirements.

Monitor Products Company recently acquired the entire Frequency Devices product line of Arvin Industries. All drawings, test equipment and design information regarding previous **Arvin devices** have been integrated with the Monitor Product line. We are confident that this expansion of Monitor's capability assures our ability to fulfill your requirements exactly, whether TCXO or TC/VCXO

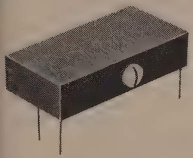


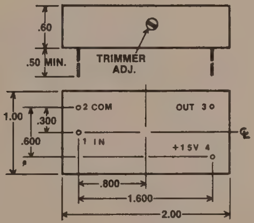
Temperature Compensated Crystal Oscillator
Uncompensated Crystal Oscillator
Oscillator Output

TC/VCXOs

Monitor's TC/VCXOs provide all the many advantages of Monitor Products TCXO's combined with a unique frequency versus voltage control capability. Total deviation of up to 1000 ppm at rates from DC to 20 KHz are available depending on center frequency and temperature range specified. Typical linearity is 5% to 10% of best straight line. Center frequency stabilities to ±1 ppm are available depending on frequency and temperature range. Slightly derated stability versus temperature designs are available to 150 MHz. Full complement of optional wave shapes available include square wave TTL, Sinewave and MOS/C-MOS. A detailed quotation is available upon receipt of your specific requirements. Please contact the factory direct.

E01-E06 SERIES TC/VCXO





Monitor TCXO Series E01 thru E06 are specifically designed for volume commercial or industrial applications. Automatic preselection of required network components is accomplished by use of unique mass production fixtures and a powerful digital computer program. This series is the lowest priced TC/VCXO design available in full production within the industry. Standard negative slope VCO control of ±20 ppm for ∓1V input variation. May be used as TCXO without input to pin 1.

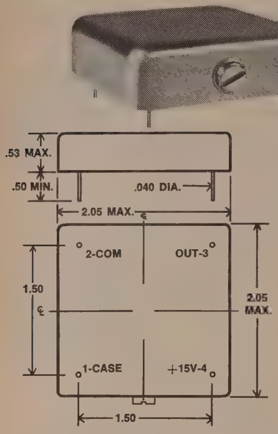
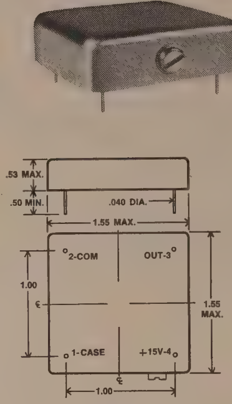
TCXO TEMPERATURE COMPENSATED OSCILLATORS

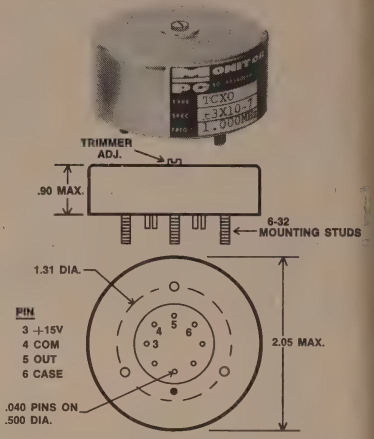
E07-E90 SERIES TCXOs



E07-E42



E43-E78



E79-E90

Monitor hermetically sealed E07 through E90 Series temperature compensated crystal oscillators are designed specifically for applications where extremely low input power is available and minimum or near zero warm-up time is required. E07 through E42 are typical of the more popular configurations currently in volume production. Series E43 through E78 represent state of the art subminiaturization of discrete component TCXO designs. Series E79 through E90 were designed specifically for personalized Telecommunications Systems and Military Man-Pac Radio Communication applications. Square configuration available with mounting studs and/or side egress terminals.

PROPORTIONAL CONTROL OVENS

Monitor manufactures a complete line of 12 VDC to 28 VDC and 115 VAC proportional control ovens. Similar models as shown above and many other special proportional control ovens are available. Send us your requirements.

MECHANICAL THERMOSTAT OVENS

For applications where lower cost is an important factor and where long-term stability and aging are not critical, Monitor offers its standard line of mechanical thermostat controlled ovens.

48 Years of Frequency Control Know-How

FILTERS/CRYSTAL & LC

UTILIZING THE "INITIAL FILTER ANALYSIS CONCEPT"

As one of the nation's leading suppliers of LC and quartz crystal filters, Monitor is able to meet your **Total Filter Needs.**

We cover the frequency spectrum from audio to 30 MHz, **without restriction** to bandwidth.

Monitor combines many years of engineering experience, with its computer-aided design facility, to better satisfy customer requirements.

Our **"Initial Filter Analysis Concept"** can save you time and money when specifying crystal and LC filters.

We can assist you at the quoting-stage to arrive at the optimum network.

With the "Initial Filter Analysis," the customer receives a computer analysis in plot and tabloid form, ending in recommendations and a summary. An example of computer-graphic analysis is shown below.

The crystal is the heart of the crystal filter and our 48 years of experience and capabilities in the production of quartz crystals is well known.

Monitor primarily designs to custom requirements, but has developed standard filter designs which are available on short notice.

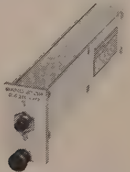
CCIR FILTERS: MULTI-CHANNEL TRANSMISSION SYSTEMS



Complete sets of low-pass and high-pass, band-pass and band-stop filters, designed to conform to the CCIR recommendations A, B and C.

Low pass	(8 KHz - 12.5 MHz) LC filters.
High pass	(8 KHz - 12.5 MHz) LC filters.
Band pass	(8 KHz - 105 KHz) LC filters. (105 KHz - 12:5 MHz) crystal filters.
Band stop	(8 KHz - 12.5 MHz) LC and crystal filters.

DIAGNOSTIC FILTERS FOR DYNAMIC ANALYSIS:

Center frequency 100 KHz, 300 KHz.

Standard impedances 3 K ohms.

High reliability, solid-state temperature controlled.

Package size: 4.2" x 2.0" x 3.9".

Available with octal plug or straight pin terminals.

In addition we supply filters of 2:1 shape factor with the following bandwidths. 100 Hz, 200 Hz, 400 Hz, 500 Hz, 700 Hz, 800 Hz, 1000 Hz.

Part No.	3 db-BW (Hz)	60/3 db SF	Insertion Loss (db)
SF-5001-1	1.5	4:1	10.0
SF-5001-2	2.0	4:1	10.0
SF-5001-3	5.0	4:1	6.0
SF-5001-4	10.0	4:1	5.5
SF-5013	10.0	2:1	5.5
SF-5001-5	20.0	4:1	4.0
SF-5004-1	20.0	2:1	4.0
SF-5004-2*	50.0	2:1	3.0
SF-5004-3*	75.0	2:1	2.0

*Also available phase match to ±5 degrees.

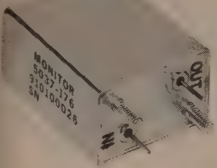
48 Years of Frequency Control Know-How

FILTERS/CRYSTAL & LC

UTILIZING THE "INITIAL FILTER ANALYSIS CONCEPT"

COMB-FILTER SETS

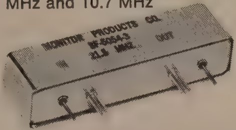


168 KHz through 264 KHz, spaced 4 KHz
1 db bandwidth = 200 Hz
30 db bandwidth = 1800 Hz
Zin = 27 K ohms, Zo = 6.8 K ohms
Amplitude matched to within 0.4 db from 0°C to 45°C to within 0.7 db from —20°C to +65°C
Size: 1.39" x .859" x 1.75 "

Monitor also designs and manufactures complete sets of contiguous comb filters up to 25 MHz.

VERY NARROW BANDWIDTH FILTERS

AT 21.5 MHz, 21.4 MHz and 10.7 MHz



These filters contain overtone crystals to provide low insertion loss and greater stability.

Less than 0.5 db ripple, Zin = Zo = 50 ohms

Part No.	3 db-BW (KHz)	70 db BW (KHz)	Insertion Loss (db)
SF-5058-1	8	28	2.0
SF-5058-2	4	14	2.5
SF-5058-3	2,8	10	3.0

MULTIPLEX FILTERS

Monitor manufactures multiplex filters in the following frequency ranges. Send us your requirements for a prompt evaluation and quotation.

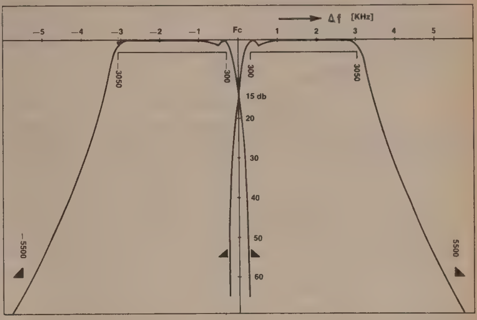
64 - 108 KHz, 4 KHz spacing.
148 - 192 KHz, 4 KHz spacing.
Typical bandwidth at 1 db is 3250 Hz.
Typical bandwidth at 55 db is 4750 Hz.

SINGLE SIDE BAND FILTERS

Monitor manufactures a complete range of single side band filters available at all major IF frequencies.

A typical filter curve is shown below.

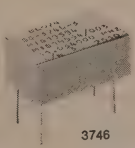
Send us your requirements for a prompt evaluation and quotation.



How to Order Filters. Specify the following:

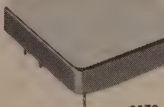
1. Centerfrequency and tolerance.
2. 1, 2, 3, or 6 db bandwidth.
3. 20, 40, 60, etc. bandwidth if symmetric. Corresponding frequencies if assymmetric.
4. Ultimate attenuation and frequency range.
5. Insertion loss and tolerance or max. ins. loss.
6. Max. passband — ripple.
7. Input and output impedance and tolerance.
8. Operating and storage temperature.
9. Drive level.
10. Can dimensions, mounting and terminal location.
11. Phase magnitude, linearity if applicable.
12. Delay magnitude and differential delay if applicable.
13. Environmental requirement if applicable. Shock, vibration, temperature cycling, leakage, insulation resistance, etc.

E. R. (HI-REL) TTL LOGIC CLOCK OSCILLATORS



3746

3528



3372

Monitor has available many hermetically sealed digital clock oscillators using established reliability components and employing our Approved Quality Assurance Programs. These units have been successfully produced for missile, space and extreme military environments, including the latest weapons systems and avionics.

The devices listed below are typical of some of the high volume systems now in production. We welcome the opportunity to review your specific E. R. requirements.

Series	Frequency Range	Output	Input VDC	Stability	Dimensions (In.) H W L	Original Application
3372	15-24 MHz	TTL	+5 ±10%	±100 ppm —30 to +100°C	1.5x1.5x3.75	Difar
3432	15-24 MHz	TTL	+5 ±10%	±100 ppm —54 to +125°C	1.0x1.0x.450	F-14 AN/AQS-
3440	2.5-10 MHz	TTL	+5 ±10%	±60 ppm —54 to +125°C	1.0x1.0x.350	F-15 AN/AQS-
3480	163 KHz - 1 MHz	TTL	+5 ±10%	±100 ppm —54 to +125°C	1.25x1.0x.265	AN/ALR 54
3528	1-5 MHz	TTL	+5 ±10%	±70 ppm —54 to +125°C	1.0x1.0x.375	AN/BQS-

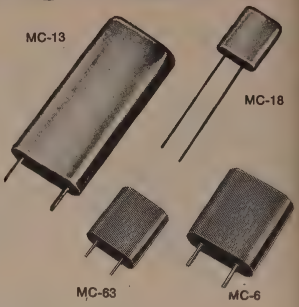
STANDARD QUARTZ CRYSTALS

for commercial and military applications

"Supplying the electronics industry with quality crystals for 48 years."



This page provides engineering data and product data on the six different crystal cuts that Monitor Products normally manufactures. In ordering units referenced under Mil-C-3098, complete ordering information is not necessary (order by frequency and CR number) since the specifications are referenced under the CR type and the units will be built to those specifications. In high reliability requirements* and those not covered under Mil-C-3098 (note below), Monitor will provide engineering design and product data under each cut to help the design engineer determine the type of quartz resonator needed. A copy of this crystal handbook is available on request.

INFORMATION REQUIRED WHEN ORDERING CRYSTALS

1. Mode of operation of the crystal unit.
2. Drive level at which the crystal unit is being operated.
3. Temperature deviations that exist in the environment in which the crystal is operating.
4. Maximum equivalent impedance or resistance of the crystal for satisfactory circuit operations.

Special units can be procured to meet Mil-E-5400, Mil-E-5272, and other more severe environmental specs up to 30 G's to 2,000 cycles.

METHOD OF TESTING

In order to insure correlation between Monitor and the customer, the following test sets or equivalents are used by Monitor for both manufacture and testing (1KHz to 1MHz; T/S-710/TSM), (1MHz to 15MHz fundamental; T/S-330/TSM), (15MHz to 140MHz, T/S-683/TSM).

*SEE MONITOR'S HIGH RELIABILITY KOLDWELD CRYSTAL PAGE.

WHEN ORDERING CRYSTALS FOR USE IN CLOCK OSCILLATORS CONSULT MONITOR'S OSCILLATOR PAGES FOR COMPLETE SPECIFICATIONS ON PRE-TESTED MODULES FOR COST SAVINGS UP TO 50%.

48 Years of Frequency Control Know-How

KOLDWELD STABILITY RELIABILITY CRYSTALS

Monitor's KTO Series Frequency Control Crystals are an extension of Monitor's capability in applying KOLDWELD techniques to crystal packaging. These high reliability, low aging crystals offer precision frequency control in a subminiature package (TO-5 transistor package). The KX type crystals conform to the dimensions and requirements of standard military type HC holders and are ideally suited to extreme environments. The KX type can be used as replacements for standard HC-6, HC-18 and HC-13 mil-spec units.

Monitor also manufactures a complete line of crystals (HC-6/U, HC-18/U, HC-13/U, HC-25/U) to MIL-C-3098 (4 KHz-200 MHz). See opposite page.

Write for our crystal specification handbook.

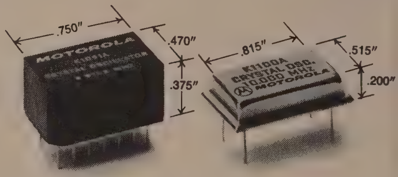
48 Years of Frequency Control Know-How

Microprocessor Clocks

SPECIFICATION	K1117A	MC6871A
Designed specifically to drive:	**Intel 8080 CPU**	**Motorola MC6800 MPU**
Frequency:	2.000 MHz	500 kHz or 1,000 MHz
Frequency Stability: (Inclusive of calibration tolerance at 25° C, operating temperature, input voltage change, load change, aging, shock, and vibration.)	±0.01%	±0.01%
Operating temperature range:	0° C to + 70° C	0° C to + 70° C
Input Voltage	VDD + 12V VCC + 5V VSS GND	+5V
Logic Outputs	ø1, ø2 NMOS ø1, ø2 TTL	ø1, ø2 NMOS ø1, ø2 TTL
Interrupt Capability	No	Yes
Dimensions:	1.34″ L x .84″ W x .20″ seated Height (34,1 x 21,34 x 5.08mm)	

The MC6871A and the K1117A are designed to provide the critical 2-phase, non-overlapping waveforms required by the specific microprocessor. Crystal, oscillator, NMOS drivers and necessary waveshaping circuitry are packaged by hybrid thick-film IC technology into one dual-in-line module that cuts your component count and board space.

Integrated Circuit Crystal Clock Oscillators



SPECIFICATION	K1091A	K1100A	K1114A	K1115A	K1116A

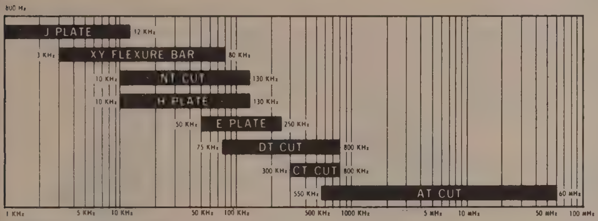
NEL FREQUENCY CONTROL DEVICES

OUR COMPANY

Northern Engineering Laboratories was founded in 1954 in recognition of the need for a reliable source of high quality, low frequency quartz resonators for advanced and sophisticated requirements as well as conventional applications. Our excellent record of delivery and customer service has contributed to a steady growth through three previous plant locations to our present modern air-conditioned building. Since the main structure was completed in 1961, two additions have been made, doubling the total area. Our product lines of quartz crystals, temperature control ovens and packaged oscillators have continually expanded and improved.

OUR PRODUCT



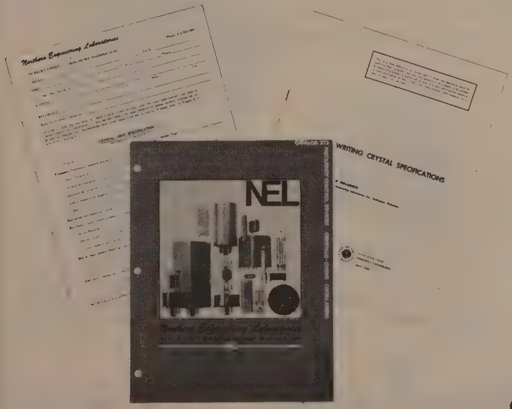
Leadership in the design and manufacture of low frequency crystals enables us to provide the widest variety in choosing the proper crystal for your application. Dependable quality and producible specifications help you to keep your production schedules. Complete spectrum coverage from under 1 KHz to over 50 MHz means one source that can handle most applications. For technical information, see our catalog.

CRYSTALS
OVENS
OSCILLATORS

Crystal and component ovens that employ dynamic thermal design and utilize the best components and construction techniques. Either standard or custom designs to provide optimum performance for your application. Contact us for details.

Northern Engineering offers a complete line of Digital, Card & Temperature Controlled Oscillators.

OUR SERVICE



Northern Engineering Laboratories
WRITING CRYSTAL SPECIFICATIONS
NEL

Complete application assistance followed by prompt, dependable delivery of reliable frequency control devices will help ensure the success of your product. Contacting our sales representative or factory will bring a rapid, useful response. The value of our service is enhanced by allowing us to work with you early in the design stage.

Write for new 20 page technical brochure and pamphlet on "Writing Crystal Specifications."

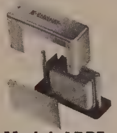
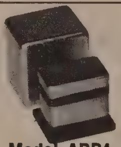
ovens

PROPORTIONAL CONTROL CRYSTAL OVENS

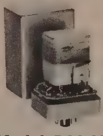
New technology in circuit design now provides low cost proportional control crystal ovens. High reliability, low sustaining power consumption and noiseless operation. A representative few of many available models are shown. Available in standard temperatures and voltages.



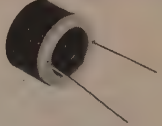
Model ADP5
A side access oven for 5 HC-6/U crystals. For AC/DC operation. Wire leads for circuit board mounting.



Model ADP4
For 4 HC-6/U crystals, has center shield. For AC/DC operation. Wire leads for circuit board mounting.



Model PC2-20
A precision oven for 2 HC-6/U crystals or components. Octal base. 115 VAC. Models for DC voltages available.



Model T05P
For T05 crystal, Transistor or I.C. 5, 12 or 24 VDC. A wide range of temperature models.

PROPORTIONAL CONTROL COMPONENT OVENS

Ovenaire offers a complete line of component ovens, from PCB mount mini-ovens for solid state and IC designs to large cavity area ovens for more sophisticated systems. A few of many available standard designs are shown. Custom design capabilities to meet most exacting requirements.

Model CO-1142
Cavity area 2 13/16″ x 4″ x 13/16″ high. 24V DC. Temperature +60°C to +85°C, factory set.

Model CO-1139
Cavity area 2½″ x 4½″ x 1¼″ high. 12V DC. Temperature +60°C to +85°C, factory set.

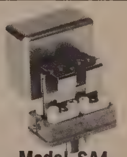
Model CO-1128
Cavity area 2½″ x 2½″ x ⅝″ high. 28V DC or 115V AC. Temperature +60°C to +85°C factory set.

Model CO-1090
Cavity area 2 47/64″ x 2 21/64″ x 1 3/32″ high. 28V DC or 115V AC. Temperature +60°C to +85°C factory set.

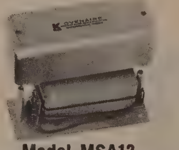
THERMOSTAT CONTROL OVENS

For more than a decade, Ovenaire has been recognized as the leader in thermostat controlled ovens. This proud reputation continues with a full line of crystal and component ovens featuring the reliable snap action thermostat.

Model SA2
For 2 HC-6/U crystals. Fast warmup, low power. 6 to 28V AC/DC. All standard temperatures.



Model SA4
For 4 HC-6/U crystals. Fast warmup, low power. 6 to 28V AC/DC. All standard temperatures.



Model MSA12
For 12 HC-25/U crystals. Minimal cycling. Circuit board mount. Standard, AC/DC voltages and temperatures.

Model SA12
For 12 HC-6/U crystals. Wire leads or terminals. Standard AC/DC voltages and temperatures.

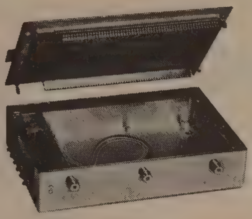
temperature control devices

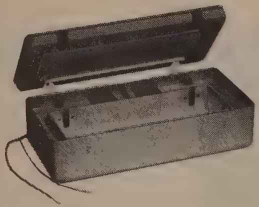
HIGH STABILITY, LARGE CAVITY COMPONENT OVENS

State of the Art Temperature regulation and temperature indicators have been built into these component oven designs. These models feature fast warm-up, temperature setting, high stability over a wide ambient range with a wide variety of thermal loading, and temperature indicating outputs. These ovens are available with either military or commercial grade control components, with special materials and finishes and custom tailored to interface with your application.



Model CO1178

A high stability oven designed with all MIL-STD components. Available with temperature indicator in addition to secondary control to provide optimum MTBF. Cavity 3.4″ x 4.5″ x .8″. 24 VDC, 65°C.



Model CO1195

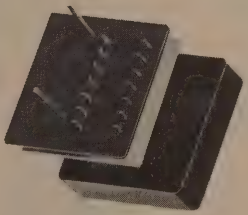
Fast warm-up with large thermal load using semi-rigid coax for electrical hookup. Outstanding performance over wide ambient range. Cavity 2.0″ x 6.2″ x 1.0″. 28 VDC, 87°C.

Model CO2001

A printed circuit board mounted oven with high stability and feed-thru terminals for direct electrical inter-connection. Cavity 2.75″ x 3.94″ x .79″. 24 VDC, 70°C.

MINIATURE CRYSTAL & COMPONENT OVENS

Great versatility and accessibility at low cost. Literally covering all needs for temperature control. This blanket design has been generated for applications that require easy access and at low cost by comparison with totally enclosed ovens. No sacrifice need be made in temperature stability if the oven is tailored to the given thermal loading. Ideally suited for printed circuit board and existing surface mounted devices.

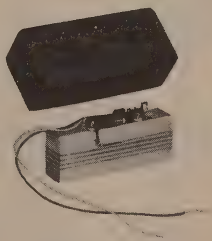


Model PC1-25

Mini-module, component or I.C. oven for printed circuit mounting. Capacity 14 or 16 DIP I.C. or .375″ x .875″ x .156″ component cavity. Overall size .312″ x 1″ x 1″. 12 VDC, 65°C.

Model PCL1-27

Printed circuit board mounted crystal oven. Capacity one HC-18/U, HC-25/U, HC-42/U or HC-43/U crystal. Overall size .750″ dia. x .562″. 15 VDC, 50°C.



Model PCL12-10

Multiple crystal or component oven enclosure for socket or printed circuit board mounting. 12 HC-25/U or HC-18/U crystals. Overall size 1.0″ x 1.25″ x 3.0″. 12 VDC, 75°C.

All Models are available with temperature and voltage options and a variety of configurations for electrical interface as required.

OVER 100,000 STRONG

Every month over 100,000 buyers and specifiers like yourself receive Electronic Products Magazine . . . that makes us the largest electronics magazine around. And we're the largest for a darn good reason . . . we give you what you need: a practical editorial approach . . . one that's application and new product oriented. Editorial that offers solutions to the problems you face in your everyday task of designing and building electronic systems and subassemblies. The type of information you can put to use now.

If you're not getting EPM . . . why not write our circulation manager for a qualification form and join the over 100,000 strong.

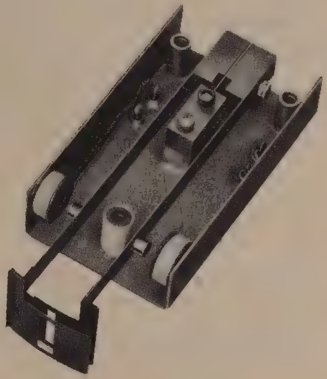
FORK OSCILLATORS

Output frequencies from 1.0 to 20,000 Hz. Absolute frequency accuracies from ±.10% to ±.001%. Operating temperature ranges up to from −55°C to +100°C depending upon accuracy. Wide choice of DC inputs from 5 to 28 volts and output waveshapes such as logic-clock, square or sine. Full MIL shock and vibration environmental capability, hermetically-sealed designs. Also ultra low current versions, miniature sizes, specials to suit either your performance or packaging requirements.

FORK OPTICAL MODULATORS

Frequencies from 40 to 1,000 Hz...for modulating or chopping either light or energy beams. May often be used to replace motor driven choppers, offering weight and power savings plus no need to lubricate. Particular design and construction provides exceptional fork balance and high resistance to shock and vibration for most MIL specs. Tine ends may be fitted with shutters, lenses, or mirrors to suit your special requirements, various drive circuits available.



COMING SOON...

Still smaller oscillators, a greater selection of fork optical modulators, and new optical scanning devices.

PHILAMON® SPECIALIZES in top performance and top reliability products. For latest information, for complete application cooperation, for prompt service on standards or specials . . . phone, write, or twx . . .

MONOLITHIC CRYSTAL FILTERS

If you need crystal filters, chances are your best bet is a monolithic — for cost, for size, for performance. If you need monolithics, you need PTI — the oldest and largest supplier. And monolithics are our principal product — not a sideline.

STANDARD MODELS

For low cost, take our 10.7 MHz and 21.4 MHz integrated crystal filters. All models are available off-the-shelf. All feature tandem monolithic construction for minimum size and high stopband performance. Our 10.7's and 21.4's are available in upright, flatpack, p.c. assemblies or sets of monolithic units for assembly on your own board.

Guide to Standard 10.7 MHz Models

13 kHz Bandwidth	15 kHz Bandwidth	30 kHz Bandwidth	No. Poles (Resonators)	Dimensions WxLxH
2194F	2195F	2196F	2	.185x.432x.45
1463	1464	1465	4	.47x.59x.60
1466	1467	1468	4	.63x.89x.23
1469	1470	1471	6	.47x.59x.60
1472	1473	1474	6	.63x1.32x.23
1475	1476	1477	8	.50x.75x.60
1478	1479	1480	8	.63x1.75x.23
1433	1434	1435	8	1.02x2.39x.52

Models 1433 - 35 interchange with commonly used conventional crystal filters.
Standard European configurations are also available.

Guide to Standard 21.4 MHz Models

13kHz Bandwidth	15 kHz Bandwidth	30 kHz Bandwidth	No. Poles (Resonators)	Maximum Dimensions WxLxH (in.)
2249F	2250F	2251F	2	.185x.432x.45
1617	1618	1619	4	.47x.59x.60
1620	1621	1622	4	.63x.89x.23
1623	1624	1625	6	.47x.59x.60
1626	1627	1628	6	.63x 1.32x.23
1629	1630	1631	8	.50x.75x.60
1632	1633	1634	8	.63x 1.75x.23

PTI also offers standard models at many other popular frequencies including 5.26, 6.46, 8.0, 16.9, 20.0, 30.0, 32.0, 75 and 156 MHz.

CUSTOM MODELS

The same cost saving techniques of PTI standard integrated crystal filters can be applied to your high volume custom requirements in I-F filtering, spectrum clean-up, parametric up-conversion and front-end filtering, just to name a few. PTI engineers will work with you from start to finish to meet your specific requirements from 5 to 300 MHz. They'll be glad to discuss performance characteristics, packaging and cost. Prototypes are usually available within 4 to 6 weeks. Specification forms are yours for the asking. Write or call. If you have questions about monolithics, we've got the answers.

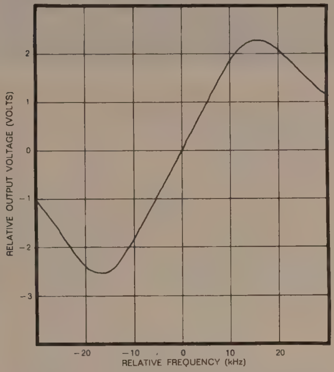
The standard in monolithic crystal filters

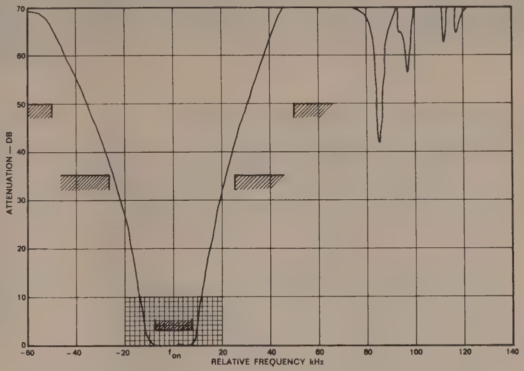
More Off The Shelf From P.T.I.

MONOLITHIC CRYSTAL DISCRIMINATOR



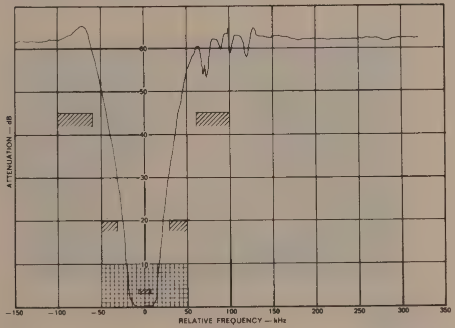
Model 2283F, at 10.7 MHz, offers 1% total harmonic distortion and 800 mV of recovered audio when used with a CA3089E quadrature detector. Model 2378F offers similar performance at 21.4 MHz. Data sheets available on request.

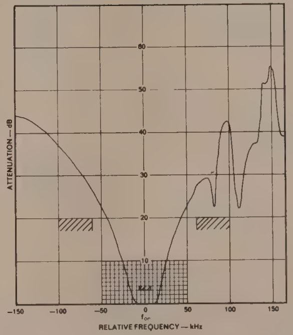
A 45 MHz SPECIAL



Our new 45 MHz Model 4371F is a 4-pole monolithic crystal filter offering maximum performance in a single HC-18 envelope. Designed for first IF use in new generation 900 MHz mobile receivers. Attenuation is 3dB max. over ± 7.5 kHz. Data sheet available on request.

FRONT-END FILTERS





These two-pole and four-pole monolithic crystal filters are designed especially for use as front-end filters for VHF low-band and high-band land mobile radios. All models are suitable for field or factory installation. They are matched to 50 ohms and fitted with phono-jacks (2-pole models) or BNC connectors (4-pole models). Two-pole models offer alternate channel rejection of 20dB min. and ultimate attenuation of 30dB. Four-pole models offer adjacent and alternate channel rejection of 20 and 45 dB (high-band) or 15 and 40 dB (low-band).

Case dimensions: l - 2.39 w - 1.02 h - 1.07

Other case styles available on special order. For OEM applications the monolithic elements can be supplied individually.

The standard in monolithic crystal filters

Q-Tech Corporation

PIONEERS IN HYBRID TECHNOLOGY
STATE OF THE ART DEVELOPMENT

TTL & CMOS CLOCK OSCILLATORS

Q-TECH CLOCK OSCILLATORS

are the result of long and extensive development which has joined the semiconductor, hybrid and crystal techniques. Units are now available in miniature low profile packages with a wide range of capabilities.

The units are capable of producing the high stability temperature and aging characteristics associated with AT cut quartz crystals. This stability is achieved over the entire wide frequency range.

ADDITIONAL CHARACTERISTICS

	TTL	CMOS
Power Supply:	5.0 Volts ±10%	5.0 to 15.0 Volts (Specify)
Symmetry:	60/40% or better above 6.0MHz 50/50% below 6.0MHz (available up to 12.5MHz)	50/50
Rise and Fall Times:	Less than 10 nanoseconds at 10.0MHz	75 nanoseconds max. V_{dd} 5.0 Volts 80 nanoseconds max. V_{dd} 10.0 Volts
Level (Output):	"1" 2.8 Volts Min. "0" .4 Volts Max.	CMOS "1" V_{dd} (less .01V) "0" 0.01 Volts
Power Consumption:		See Page 4

GENERAL (TTL & C-MOS):

Stability Versus	10% Change in Input:	2 PPM (.0002%)
	20% Change in Load	1 PPM (.0001%)
Aging:		5 PPM (.0005%) Max (30 Days) or 10 PPM

OTHER HYBRID FREQUENCY CONTROL DEVICES

Other HYBRID FREQUENCY CONTROL devices are offered on a custom basis. Consult the factory for units with VCXO characteristics, gated output, multiple frequency output, or custom logic. Units ordered to −3 stability (±.0005% 0° to 50°C) require an external tuning capacitor. This tolerance can only be met when the nominal frequency is within ±.0001% at 25°C. This tuning capacitor is necessary to adjust the unit's nominal frequency to ±.0001% at 25°C. The tuning capacitor (nominally 32 pf) is connected between two designated internal tie points.

FREQUENCY VERSUS TEMPERATURE OPTION

1 ±.01% /2 ±.005% /3* ±.0005%	0 to 50°C
4 ±.005%	0 to 70°C
5 ±.0025%	−20 to +70°C
6 ±.005%	−55 to +105°C
7 ±.003% /9 ±.005% /10 ±.01%	−55 to +125°C

PIONEERS IN HYBRID TECHNOLOGY
STATE OF THE ART DEVELOPMENT

TTL & CMOS CLOCK OSCILLATORS

C-MOS CLOCK OSCILLATORS:

Frequencies available in the C-MOS line of oscillators are limited presently to 10.0 MHz. This frequency limit is also related to input voltage. It is essential, therefore, when ordering a C-MOS unit to specify the input voltage.

Power requirements of C-MOS units are related to both frequency and input voltage. Most of the power is dissipated within the crystal oscillator portion of the device, and buffering, division, or other logic requirements within the unit contribute little to the total power consumption.

The graph below shows a family of curves that demonstrate the above. One curve shows reliable frequency versus voltage operation (solid line) while three other curves show power versus frequency at 15.0 Volts, 10.0 Volts, and 5.0 Volt levels. These curves are derived from Q-Tech's normal approach of utilizing "AT" cut crystals within the 3.0 to 10.0 MHz spectrum to produce the frequency or logic functions required.

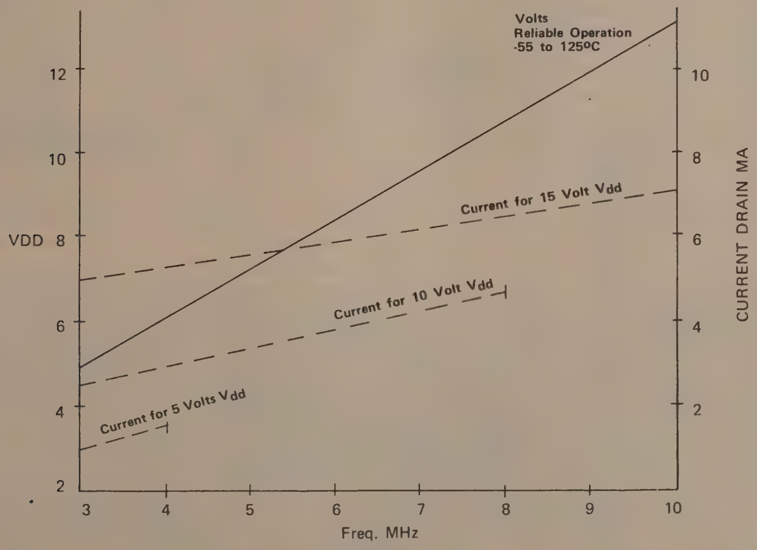
Custom units of lower power operate from a low frequency crystal source and may operate from a much lower voltage. Information on these devices can be obtained by calling the Q-Tech sales or application engineering department. As the state of the art of available C-MOS devices improves, we will have available higher frequency units at lower voltages. Consult the factory for your custom requirements.

FREQUENCY RANGES AVAILABLE

Package Size	C-MOS Frequency Range	TTL Frequency Range
QT1	50 KHz to 10MHz	50KHz to 30MHz
QT2 or QT3	300Hz to 10MHz	1KHz to 25MHz
QT4 or QT6	1Hz to 10MHz	1Hz to 25MHz

QUALITY CONFORMANCE & RELIABILITY ASSURANCE:

Q-Tech's facilities are qualified to Mil-I-45208 and are well equipped to perform the screening, quality conformance and reliability assurance requirements of Mil-M-38510A and Mil-Std-883. Personnel at Q-Tech are fully conversant with and experienced in performing these screening and O.A. requirements.



POWER CONSIDERATIONS FOR Q-TECH C-MOS CRYSTAL OSCILLATORS

REEVES-HOFFMAN

Described are typical units of commonly used types. Descriptive data, including measured capabilities, furnished on request. If your need concerns types and parameters not shown, please contact our plant.

Available with special C_0, C_1, and L_1 for filter applications • temperature coefficients to your specifications • pre-aging to guarantee stability of high precision units • special designs for high shock and vibration. All units meet mil-3098 requirements. Special high precision units, with aging characteristics up to 2×10^{-11} per day, are available in standard frequencies of 1, 2.5 and 5 MHz.

WATCH & TIME KEEPING
QUARTZ CRYSTALS
MODEL WX-2CF

FEATURES
- Lowest cost
- Higest accuracy; ±5ppm
- Smallest size
- Very rugged
- Laser tuned
- Low aging

DESCRIPTION
Rugged Tuning Fork Designs, Semi Conductor Manufacturing Techniques And Automatic Laser Beam Tuning Used For Low Cost, High Volume Production.

APPLICATIONS
Any time keeping function from the smallest ladies watch to standard electrically powered timers.

SPECIFICATIONS

Frequency Tolerance (Specified oscillator, at 25°C)	32,768 Hz ±5ppm
Series Resistance, R_m	350 K OHM typical 500 K OHM maximum
Motional Capacitance, C_m	0.22 fF typical
Geometric Capacitance, C_g	2.0 pf typical
Shunt Capacitance, C_s	0.15 pf typical
Q	65,000 typical 45,000 minimum
Drive Level	1.5 µa PP maximum
Turning Point, T_o	20°C ±5°C
Temperature Coefficient, K	-0.04 ppm/°C^2
Aging (first year, at 25°C)	1 ppm typical 3 ppm maximum
Shock (3000 g, for 0.2 msec.)	3 ppm max. shift
Vibration (20g RMS, 10 to 1000 Hz)	1 ppm max. shift

APPLICATIONS INFORMATION
Calibration Frequency

Since Statek supplies crystals calibrated within 5 ppm, it is essential that the frequency offset of the circuit and watch module be well defined. This can best be achieved by measuring the frequency of reference Statek crystals in the circuit of intended use. Tuning production units in accordance with the reference oscillator and crystal has proven to be more effective than specifying a load capacitance.

LOW FREQUENCY

CRYSTAL OSCILLATORS

MODEL SQXO-2

FEATURES

- Oscillator frequency range — 10 kHz to 250 kHz
- Extremely small size
- Low milliamps current consumption
- Wide operating temperature range
- Withstands high shock and vibration levels
- CMOS and TTL compatible

DESCRIPTION

Subminiature • Thin Film Hybrid • Stable • Rugged • Buffered Square Wave Output

APPLICATIONS

SQXO OSCILLATORS contain • SX-1H crystal • chip transistors. These series resonant circuits drive TTL and CMOS loads.

SPECIFICATION SUMMARY*

	SQXO-2
Calibration Voltage	5± 0.5 VDC
Supply Voltage Range	Depends on freq. & temp. range
Current (typical, at Calibration Voltage into 10 pf and 10 MΩ load)	0.50 mA at 10 kHz to 2.0 mA at 250 kHz
Frequency Ranges	10 kHz to 250 kHz
Stock Frequencies**	10.0, 12.8, 15.36, 16.0, 16.384, 19.2, 32.768 & 100.0 kHz
Standard Frequency (Calibration A) at 25°C	± 0.01% from 10 to 50 kHz and ± 0.02% from 50 to 250 kHz
Frequency Stability over Temperature Range	Approximates SX-1 Crystal Characteristics
Operating Temperature	0 to 70°C, (C) −40 to + 85°C (I) −55 to + 125°C (M)
Shock and Operating Vibration***	1000 g, 1 Ms, ½ Sinewave; 11.6 g RMS, 100-1000 Hz, random (MIL-STD-202D, 1D)

*Specifications subject to change without notice.
**Stock frequencies are established by demand. Contact Statek for current frequency list.
***Improved shock and vibration specifications available.

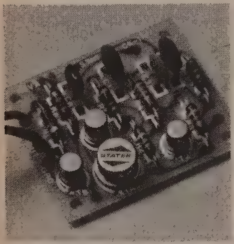
CRYSTAL OSCILLATOR KITS – MODELS CK-1H & CK-1V

COMPLETE LOW FREQUENCY CRYSTAL OSCILLATOR KITS (actual size)



NOTE: Models CK-1H and CK-1V Kits **do not** include integrated circuits, resistors, capacitors or wiring.

THE CK-1H AND CK-1V OSCILLATOR KITS CAN BE USED FOR:

- Oscillator breadboards
- Low volume production oscillators
- Reference oscillators for frequency correlation

DESCRIPTION

The CK-1V kit utilizes a Pierce (single inverter) oscillator circuit and contains five SX-1V crystals. The CK-1H kit utilizes a series circuit (two inverters) and contains six SX-1H crystals. The frequency calibration is ±0.01% for all frequencies except 240 kHz which is ±.02%. The table below lists the frequencies included in the kits.

Frequency	Applications
10,000 kHz	Decimal Time Base
15,360 kHz	60 Hz Time Base
19,200 kHz	Modem Clock
32,768 kHz	Seconds Timer
100,000 kHz	Decimal Time Base
240,000 kHz	Motor Speed Control

Both kits have an etched and drilled circuit board. The Model CK-1H Kit circuit uses three low cost transistors. The Model CK-1V Kit uses a CMOS 4007A Dual Complementary Pair Plus Inverter.

DOCUMENTATION

The circuit documentation supplied with each kit consists of:

- Circuit schematics with a table of component values for different oscillator frequencies.
- A physical layout of the oscillator
- A parts list for various oscillator frequencies

Description of circuit operation, layout characteristics and mounting provisions are also included.

The kits are priced at $27.00 each in single quantity.

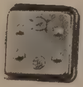
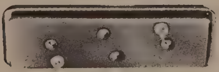
QUARTZ CRYSTALS





Frequencies from 68 KHz to 75 MHz manufactured to the highest tolerances and hermetically sealed with the latest methods.

Resistance weld sealing is available at no extra cost in the HC-6/U, HC-18/U, HC-25/U and HC-33/U standard holders. This process uses an electrical weld to seal the crystal unit in a helium-nitrogen atmosphere. Solder balls and aging due to flux contamination are completely eliminated.

QPL-3098

In house laboratory facilities can perform testing to MIL-C-3098F. Many standard types are QPL approved and custom designs are available on request.

CRYSTAL FILTERS

Crystal filters from 10 KHz to 30 MHz are computer designed for maximum performance. Custom designs are considered a challenge. Contact Torotel's engineering staff for assistance.

WE SPECIALIZE IN THESE TYPES OF PASSIVE NETWORKS:

BAND PASS
BAND REJECT
LOW PASS
HIGH PASS
LINEAR PHASE
PHASE EQUALIZER
AMPLITUDE EQUALIZER
DELAY LINES
IN THE FREQUENCY RANGES FROM DC TO 35 MHz

CREATIVE LEADERS IN COMPONENTS FOR COMMUNICATION TECHNOLOGY

CRYSTAL FILTERS

DCA and/or MIL-STD-188 Type Crystal Filters that provide required amplitude and envelope delay characteristics without use of separate equalizers are available at Carrier Frequencies of 100KHz through 1750KHz for both two and four channel applications.

Standard and custom designs for bandpass, band reject, phase matched filters plus discriminators are available at frequencies of 10KHz through 30MHz.

CRYSTAL OSCILLATORS

Fixed frequency, voltage controlled, temperature compensated or ovenized. Standards, miniaturized and custom designs available from 5Hz through 100MHz.

MAGNETIC COMPONENTS AND RESONATORS

Lowpass, highpass, bandpass, band reject and prescribed transfer function characteristics available from 1Hz to 150MHz.

Custom resonator design and production is available for frequencies from 10KHz through 30MHz.

BANDPASS FILTERS & DELAY EQUALIZERS FOR VOICE, RTTY MULTI-PLEX OR DATA TRANSMISSION.

NOTES

1. Many models and frequencies are available with off-the-shelf delivery.
2. When ordering a standard product, please specify model, frequency and any desired option.
3. While Vectron offers a broad line of standard products, we are equipped to handle "specials" expeditiously and economically.

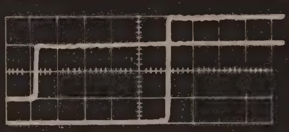
SERIES "HF", "HR" & "VHR" LUMPED CONSTANT DELAY LINES

HIGHEST $\frac{\text{TIME DELAY}}{\text{RISE TIME}}$ RATIO EVER BUILT!

These Delay Lines have the highest ratio of time delay to rise time that has ever been built in a Lumped Constant Line. Unlike other types of high ratio lines, the Lumped Constant Delay Line has a passband from D.C. to its cutoff frequency and maintains a constant delay over these frequencies. These lines are also unique in that they offer relatively low insertion loss. The units are characterized by tight time delay tolerances, low pulse distortion, excellent phase linearity and good temperature stability.



1 MICROSECOND PER DIVISION

For laboratory use, any time delays from 10 microseconds to 100 microseconds can be built into variable decade instruments with ratios of over 100/1. These units could have a resolution of up to 1/5000 of the total delay.

NEW MINIATURIZED SERIES "HF" HIGH FREQUENCY

The "HF" Series in most cases will serve as more than adequate electrical replacement for coaxial cable. The inconvenience of handling and storing cable will thus be eliminated.

Standard impedances of 50 and 75 ohms are available. Part numbers shown are for 50 ohms. For 75 ohms, substitute Z075 in place of Z050.

Time delays are shown in microseconds. Rise times are shown in nanoseconds in the "HF" tables below, and in microseconds in the "HR" and "VHR" tables on the following page. Bandwidths are shown in megahertz.

Units are normally supplied with BNC connectors. Tapped lines and time delays other than those listed can be supplied.

50/1 RATIO
Attenuation 9db Max. Size: 1¼"x4"x7½".

*50 OHMS ONLY

SERIES "HR"

SERIES "VHR"

While the Lines listed below are standard, time delays in-between tabulated values can be manufactured. Units are hermetically sealed in metal cans. Four studs are provided for mounting. Input and output BNC Connectors are supplied as standard. Hermetic seal terminals can be substituted on special requests.

SPIRADEL®* THE MOST COMPACT
Highest Time Delay to Rise Time Ratio DISTRIBUTED DELAY LINE

FOR IMMEDIATE DELIVERY!

SPIRADEL is a small diameter, distributed constant fixed delay line, featuring higher delay to rise time ratio and excellent pulse fidelity. Its new shape offers greater package design versatility than most other delay lines available, and the entire unit is encapsulated for maximum environmental protection.

SPIRADEL covers a delay range of 20 to 6000 nanoseconds. Any delay within this range may be selected.

Time delay to rise time ratios range up to 30 to 1. Any impedance from 50 to 1000 ohms is available. Standard delay tolerance is 5%, although tighter tolerances can be held.

SPIRADEL is designed for operation from −55°C up to +105°C. Temperature coefficient over this range is 150 parts/million/°C. Bandwidth is from DC to frequency f = .35/rise time.

"TAPPED" SPIRADEL®* FOR IMMEDIATE DELIVERY!

HIGHEST TIME DELAY TO RISE TIME RATIOS FOR COMPARATIVE SIZE AT LOWEST COST

TAPPED SPIRADEL covers a delay range from 20 to 1500 nanoseconds. Any delay within this range may be selected. Total delay tolerance is ±5%. Standard units are tapped at increments of 10% of their total delay. Delay tolerance at all taps is 10% or 2 nanoseconds (whichever is greater). Operation is from −55°C up to +105°C. Bandwidth is from DC to frequency f = .35/rise time.

STANDARD HEIGHT OF ALL UNITS: 7/16"

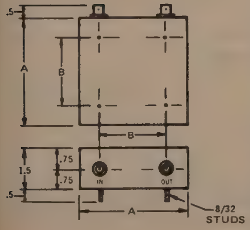
"HI-RATIO" SPIRADEL®*

HIGHEST TIME DELAY TO RISE TIME RATIO IN SPIRADEL FAMILY

TO ORDER SPECIFY PART NUMBER



"HI-RATIO" SPIRADEL offers the same excellent electrical specifications for which the standard Spiradel is so well known.

These Delay Lines are packaged in metal cans and are usually supplied with two B.N.C. connectors. Four 8/32 mounting studs are provided.

The units are available in 100 ohm impedances with time delays from 1.5 to 5.5 microseconds.

Standard Delay Tolerance: 5%

TIME DELAY/RISE TIME — 40/1 RATIO ATTENUATION 10 DB MAXIMUM

DUAL-IN-LINE "MINI" SPIRADEL®* FOR IMMEDIATE DELIVERY!

FEATURES EXCELLENT PULSE FIDELITY

EXCEPTIONALLY FINE PHASE LINEARITY OVER WIDE FREQUENCY RANGE

- Designed for operation from −55°C up to +105°C. Units exhibit a change of less than 175 parts/million/°C over this entire temperature range.
- Designed for dual-in-line mounting. Compatible with integrated circuits.
- Maximum attenuation for all delays: 7%.

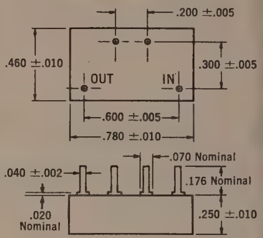
STANDARD DELAY TOLERANCE 10% (5% ON SPECIAL ORDERS)

UP TO 5 UNITS can be connected in series to achieve longer delays providing the delays and impedances of each unit are the same. The total rise time of the series combination can be determined by the following formula:

$$Tr = \frac{Td}{50} + Tr_1$$

Where
Tr = Total Rise Time
Td = Total Time Delay
Tr_1 = Rise Time of Individual Unit



*Patented and patents applied for.

DUAL-IN-LINE "MIDI" SPIRADEL®*

THE WORLD'S LOWEST COST DELAY LINE HAVING TIME DELAY TO RISE TIME GREATER THAN 5/1

"MIDI" SPIRADEL offers the same excellent pulse fidelity and phase linearity as the Standard Spiradel. Its low silhouette and dual-in-line mounting permit packaging with semiconductor and comparable components. In high volume use, the unit's low cost is competitive with all types of active devices with no sacrifice in stability and reliability. While units listed are standard-stocked, other delays and impedances are available on special order. Standard Delay Tolerance 10%. (5% on special order.)

THE "LC DIP" offers the ultimate in high density packaging and tapping capabilities. These units are excellent for high frequency applications. The availability of 10 equal delay increments and the dual-in-line packaging along with its low silhouette make for compatibility with semiconductor and other assemblies where circuit board height must be held to a minimum. This makes the "LC DIP" extremely adaptable for the computer and allied industries.

Delay Tolerance:
±5% or 4 ns (whichever is greater) for delays of 250 ns or less.
±5% or 20 ns (whichever is greater) for delays of over 250 ns.

Working Voltage: 50 volts DC.

Construction: Epoxy encapsulated.

LUMPED CONSTANT DECADE DELAY LINES TYPE "D"

Type "D" Variable Decade Delay Units are engineered to provide variable time delays with absolute stability for accurate triggering and excellent reproduction of the input pulse. These lumped constant delay lines are completely passive. All models have a minimum of 1000 to 1 resolution and consist of three or more decade switches. Any delay output of Type "D" decade delay unit is the summation of individual lines. It is not the result of a tapped line. This feature is an important factor in eliminating undesirable reflections in the output pulse. Accuracy at any delay exceeding 1% of the unit's total delay is within 3%. These units have a characteristic impedance of 500 ohms in and out. While the units listed are standard, other delays and impedances can be manufactured to specifications.

PULSE & VIDEO DELAY LINE TYPE AV-397

These delay lines are designed to be used with any 75 ohm system for either pulse or video delay. Although intended primarily for equalizing the delays in various lengths of coaxial cable, the line can be used wherever any delay from .025 μs. to 2.075 μs. is needed. The delay is changed by adding individual lines of various delays to give the desired total delay.

Each type AV-397 delay line consists of seven individual delay lines each having its own input and output terminals. Each of these seven lines may be used individually or collectively. By connecting the output of one to the input of another, 83 different time delays are available in .025 μs steps from .025 μs to 2.075 μs. The delay of each individual line is marked between its input and output terminals. The total time delay is the sum of the delays of the individual lines that are connected.

Maximum Delay: 2.075 microseconds ±3% variable in .025 microsecond steps from .025 microseconds to 2.075 microseconds.
Time Delay of Individual Lines: 1, .5, .2, .2, .1, .05, .025 microseconds.
Rise Time for Entire Line: .06 microseconds maximum.
Frequency Response: 3 db down at 5 MHz for 2.075 microseconds delay.
Distortion: 2% maximum with .2 microsecond input pulse.
Impedance: 75 ohms ±5%.
Temperature Coefficient: 50 parts/million/°C from −55°C to 105°C.
Attenuation: 7% maximum for 2.075 microsecond delay.
Mechanical: Hermetically sealed in a steel can 2" x 2½" x 5½", painted gray with black identification markings, and using 10/32 x ½ inch studs spaced on 1½" x 2" centers for mounting.

ALSO AVAILABLE: Model 75-2 — A switch variable version of the above Pulse & Video Delay Line.

TV LINE EQUALIZER TYPE AV-535

The Allen Avionic's AV-535 Equalizer is designed to compensate for losses in RG-11/U (75 ohm) cable and its equivalents. The unit is capable of equalizing 50 to 300 feet in 50 foot increments.

Terminals on mounting surface are so arranged to provide for simplified strapping for compensation of different cable lengths. All units are foamed and hermetically sealed in steel cans.

Size: 2 x 3½ x 5 inches (not including mounting stud length).
Mounting Centers: 1½ x 3 inches.
Stud Size: 8/32 x ½ inch long.

Impedance: 75 ohms ±2 ohms to 8 MHz.
Attenuation of Cable Plus Equalizer: 3 db.
Attenuation of equalizer alone is as shown in the following table:

Feet	0.1 MHz	2 MHz	4 MHz	8 MHz
50	2.97 db	2.86 db	2.79 db	2.67 db
100	2.93	2.68	2.53	2.27
150	2.90	2.51	2.28	1.88
200	2.86	2.35	2.03	1.52
250	2.82	2.19	1.82	1.21
300	2.78	2.02	1.58	0.86

Tolerance: ±.07 db.

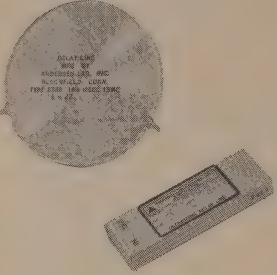
ULTRASONIC DELAY DEVICES

QUARTZ AND GLASS DELAY LINES



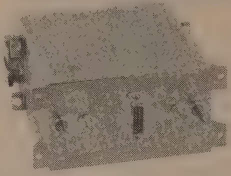
QUARTZ DELAY LINES for signal processing and storage applications. Offered with delays from 1 microsecond to 4.8 milliseconds; center frequencies from 5 to 100 MHz.

GLASS LINES for analog and digital storage in computer and teleproduction applications. Built to custom specifications in delays from 2 to 250 microseconds; center frequencies from 5 to 30 MHz.

MAGNETOSTRICTIVE DELAY LINES

MAGNETOSTRICTIVE DELAY LINES for computer memory buffer storage and video display applications. Operate over wide range of environmental conditions with excellent delay time stability. High storage capacity, rugged, reliable, low cost. Available with TTL compatible electronics; typical storage of 16,666 bits with 8.333 millisecond delay at 2 MHz bit rate. Delay range: 10 microseconds to 10 milliseconds at frequencies to 3 MHz.

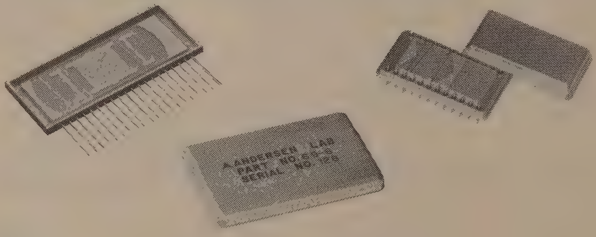
DISPERSIVE DELAY LINES



DISPERSIVE METAL STRIP DELAY LINES for pulse compression radar. Linear change of delay with frequency. Dispersive delays from 1 to 1,000 microseconds; dispersive bandwidths from 0.1 to 6 MHz. Time-bandwidth products to 150.

IMCON REFLECTION-MODE DISPERSIVE DELAY LINES for scanning spectrum analysis, pulse compression radar and compressive receivers. High time-bandwidth product, high dynamic range and low sidelobe level. Dispersive delays from 1 to 1,200 microseconds; bandwidths from 0.1 to 15 MHz. Time-bandwidth products to 10,000.

SURFACE ACOUSTIC WAVE DEVICES



Surface Wave devices for radar, communication, telemetry, and frequency domain filtering systems. Reliable, compact. Planar processing manufacturing techniques permit low cost, high volume production. Compliant with military specifications.

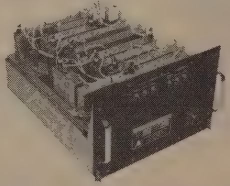
LINEAR PHASE BANDPASS FILTERS: center frequencies from 10 to 300 MHz; bandwidths from 1 to 40%; shape factors as low as 1.2

PHASE CODED DELAY LINES: any bi-phase or quadri-phase code can be specified. Center frequencies to 200 MHz; bandwidths to 50 MHz; up to 127 chips.

NON-DISPERSIVE AND TAPPED DELAY LINES: center frequencies from 10 to 200 MHz; bandwidths up to 60 MHz; time delays to 60 microseconds. Typical insertion loss of 6 to 40 dB. One or up to 60 taps available.

DISPERSIVE DELAY LINES: center frequencies to 300 MHz; bandwidths up to 40%. Sidelobe levels from 30 to 40 dB.

SUB-SYSTEMS



PULSE EXPANSION-COMPRESSION EQUIPMENT: complete sub-systems including dispersive delay lines and all necessary electronics to perform pulse expansion, pulse compression, and sidelobe suppression.

UNITY GAIN DELAY CHANNELS: complete sub-systems containing dispersive or non-dispersive delay lines with electronics as needed to satisfy specified gain, amplitude, and phase requirements.

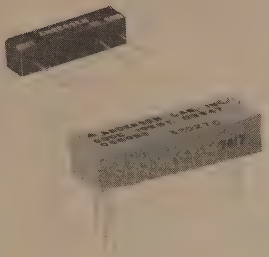
VIDEO DELAY MODULE: for drop-out compensators, vertical aperture correctors, comb filters, video disc systems; contains circuitry to pass base-band NTSC or PAL video. Available in 1H, 2H and 1/2H configurations.

ANDERSEN LABORATORIES, INC.

1280 Blue Hills Avenue • Bloomfield, Conn. 06002 • 203-242-0761 • TWX 710-425-2390

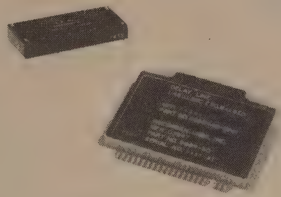
ELECTROMAGNETIC DELAY LINES

DISTRIBUTED DELAY LINES



Fixed and variable DISTRIBUTED CONSTANT DELAY LINES for video, commercial and military applications. Reliable, low-cost performance with excellent pulse fidelity and high delay to rise time ratios. Small size; for chassis or printed circuit board assembly. Conform with most mil specs. Delay ranges from 10 nanoseconds to 1 microsecond. Impedance from 500 to 2,000 ohms. Available in tapped or untapped versions.

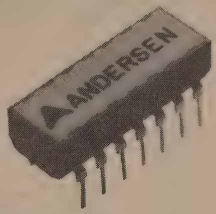
LUMPED CONSTANT DELAY LINES



FIXED AND VARIABLE LC DELAY LINES for use in commercial, video, and military applications. Available in a wide range of delays and performance characteristics to meet the most stringent requirements.

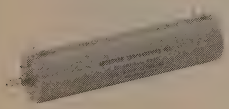
ENCODER-DECODER LC DELAY LINES for use in aircraft identification systems, transponders, and navigational aids. A multi-tapped LC delay line with low loss, light weight, for use under extreme environmental conditions such as specified by MIL STD 202B.

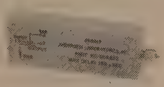
MINIATURE DELAY LINES



Low cost DUAL-IN-LINE and SINGLE-IN-LINE DELAY LINES for computer applications. Compatible with most integrated circuit series. 14 or 16 pin configurations; other pin arrangements and variable delays available. Delay ranges from 5 to 1000 nanoseconds. Delay to rise time ratio approximately 4 to 7. Available in untapped or tapped versions with typical tap spacings of 10% of total delay.

ELECTRICALLY VARIABLE DELAY LINES



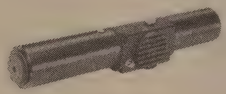


ELECTRICALLY VARIABLE DELAY LINES for controlling precise delays with high resolution and fast response time. Time constants of control circuit designed for specified response. Control is manually operated or automatically adjusted by feedback or servo mechanisms. Withstand extreme environmental controls. Nominal delays from 0.1 to 3 microseconds, with ±20% variation. Bandwidths to 50 MHz.

ACOUSTO-OPTIC PRODUCTS

by Datalight, Inc.

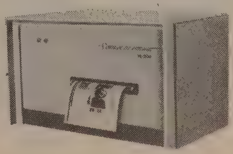
ACOUSTO-OPTIC COMPONENTS



ACOUSTO-OPTIC MODULATOR for high power Argon laser. Rise time, 50 nanoseconds; laser power level, 15 watts; multi-line contrast ratio, 10:1; single line contrast ratio, 1,000:1.

Other MODULATORS and BEAM DEFLECTORS for 3,000 to 10,600A° wavelengths. Complete line of Q-SWITCHES for NdYag lasers.

GRAPHICS RECORDER



Reliable laser-powered recording system for recording with facsimile equipment, scan converters or computer data sources to produce photographic quality hard copy with a dry process. Analog or digital interface; asynchronous operation. Records 8½ x 11" page on 3M dry silver paper in 10 seconds with resolution of 200 lines-per-inch and 16 shades of grey.

LASER RECORDING SYSTEMS

Custom LASER RECORDING SYSTEMS for OEM applications in computer output, facsimile, high speed non-impact printing, phototypesetting and laser plate making. Typical recording speed: 16mm frame, .04 sec.; 8½ x 11" page, 10 sec.; 17 x 22" newspaper page, 60 sec.

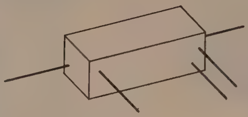
SPECIFICATIONS

Dimensions: 0.5 x 0.56 x 1.56″
Tap Spacing: 1/10 total delay
Rise Time: 15%-20% total delay
Delay Tolerance: 3% or 1 nsec
Thermal Coeff. Delay: 50-150 ppm/°C
Working Voltage: 400 v, DC or pulse
Test Voltage: 800 vDC
Temperature Range: −65°C to 125°C
Environmental: MIL-STD-202
Leads: #22 AWG tinned solid wire, 1¼″ long
Attenuation, for total delay:

0-1 μsec:	1 db max
1-8 μsec:	2 db max
10 μsec:	2.5 db

Ordering Information: Part numbers are given by designating first the type number and letter, and then the total delay, e.g., 26B-0.25.

TYPE 26



SPECIFICATIONS

Weldable leads—Internal shield
Dimensions: 0.5 x 0.5 x 1.56″
Rise Time: 15%-20% of delay
Delay Tolerance: 3% or 1 nsec
Taps: None (see below)
Thermal Coeff. of Delay: 50 to 150 ppm/°C
Working Voltage: 400 v, DC or pulse
Test Voltage: 800 vDC
Temperature Range: −65°C to 125°C
Environmental: MIL-STD-202
Leads: #24 AWG gold dumet, 1½″ long
Attenuation: 1.5 db max
Internal Shield: minimizes cross-coupling when more than one delay line per board is used
Other values of delay and impedance can also be furnished, as well as taps in specified positions.

APPLICATION INFORMATION

Most of the delay lines on this page were developed for space-flight use in scientific satellites and planetary probes. Thousands of them have been supplied over the last 12 years to NASA installations and contractors without a single reported failure or malfunction; in fact, without a single return for any reason. The design and construction methods used are our own, and to our knowledge are unique in the industry.

These designs and off-shoots in almost endless variety have been used in the whole gamut of aerospace and naval electronic equipment and instruments. Our file of modifications and custom designs is so large that special customer requirements can usually be satisfied with an existing design, at little or no increase in cost over a standard item. Among the variations included are special delay times, impedance levels, tap positions, case configurations, etc.; also closer tolerances on delay or impedance, lower temperature coefficients, higher delay to rise time ratios, etc. Recently there has been considerable interest in very low attenuation figures: 0.1 db max for 200 nsec, or 0.7 db max for 100 μsec delay, to give two examples.

TYPE 18 AND TYPE 227

Delay Tolerance: 3% or 1 nsec
Thermal Coefficient of Delay: 0.005%/°C to 0.01%/°C
Test Voltage: 800 VDC
Temperature Range: −65°C to 125°C
Ordering Information: Part Numbers are given by designating first the type number and then the delay, e.g., 227-0.75. Other values of delay and impedance can also be furnished.

TYPE 227

10 Taps, equally spaced
Rise Time: 10% of total delay time
Dimensions: 1/2" x 9/16" x 2 1/2" (lead face is 9/16" wide)
Leads: #22 AWG tinned solid wire, 1 1/4" long

Leads on end faces are spare ground leads to provide added mounting rigidity. They may be clipped off if not needed, since a third ground lead is provided on the long face.

PRECISION, RUGGEDNESS, RELIABILITY

These four series of military grade delay lines are encapsulated in an epoxy casting resin, which is poured under vacuum and cured to a solid, void-free block of high-temperature plastic. All components and wires are solidly supported against shock and vibration and completely protected from moisture and salt spray. All four series meet the requirements of MIL-STD-202.

The remarkable performance and stability of these very compact delay lines is due to the extraordinary care taken in the design and manufacturing processes. Phase characteristics are individually adjusted for optimum pulse performance, to give fast-rising, noise-free output pulses with minimum overshoot and distortion. A complete system of inspections and tests at every stage of construction and assembly assures the utmost in quality and reliability.

OTHER TYPES AND CUSTOM DESIGNS ALSO AVAILABLE

SERIES L 10 Taps

Rise Time: 7% to 8% of Total Delay

ARTRONIC INSTRUMENT CO.
SILVER SPRING, MD.

Size: 1/2" x 1.5" x 2.9"
Mounting: Two 6-32 tapped inserts

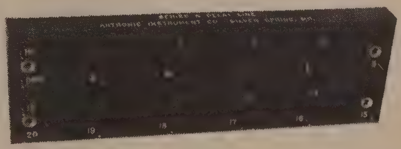
SERIES N 20 Taps

Rise Time: 3% to 4% of Total Delay



Size: 1/2" x 2" x 6.4"

Mounting: Four 6-32 Tapped Inserts

SERIES L AND SERIES N

Delay Tolerance: 2%
Delay Temp. Coeff.: 0.003%/°C to 0.01%/°C
Test Voltage: 800 vDC
Working Voltage: 400 vDC max
Pulse Voltage: 400 v peak max
Temperature Range: −65°C to 125°C
Connections: 22 gauge pins, 3/16" long

Designed to plug into printed wiring boards for dip-soldering into place, these high-performance units are readily adaptable to other types of circuit construction, since the 22 gauge pins may be easily formed to fit lugs or terminal posts. The pins are laid out on the standard 0.1" printed circuit grid.

Careful control of the attenuation characteristic and the provision of special phase-compensating circuits result in superlative pulse performance. The tables give the cut-off frequencies of the delay lines which are available in each series. Part Numbers: Give series, impedance, and delay; e.g., N-1000-40.

DUAL-IN-LINE DELAY LINES

- Delays from 1-1000 nanoseconds.
- Band Width to 60 mhz.
- Impedance 50 to 1000 ohms.
- Resistive Terminations if desired.
- Tapped Delay Lines available.
- Several separate lines in one case.
- Contact Bel Engineering for special applications.

DIP DELAY LINES

- Built to conform to MIL-D-23859.
- Temperature Range −55°C to +125°C.
- Temperature Coefficient 100 ppm/°C or less.
- Will meet most stringent MIL requirements.
- Low attenuation.
- Excellent pulse fidelity.
- Compatible with TTL and other logic modes.
- Other delays available upon request.
- Contact Bel Engineering for special applications.

DIGITAL DELAY LINE SERIES 447

Bel Fuse Digital Delay Line Series 447 features five equally tapped delay lines with total delays of 50 to 500 nanoseconds. The lines are compatible with TTL and DTL circuits. Either Logic "1" or Logic "0" inputs are accepted. Cascading of units causes no undesirable reflections. The .870 x .400 x .260 dimensions, with standard Dip Pin-Out permits dense packaging on your circuit board. Delay tolerances for total delay is 5%. Tap tolerances are ±3nsec or 10% whichever is greater. Operating temperature is 0°-70°C. Special designs upon request.

GENERAL CHARACTERISTIC OF CATALOG ITEMS AND CONSIDERATIONS FOR SPECIFYING DELAY LINES

Wherever possible, it is suggested that standard catalog items be used. When this is not possible, the following factors should be considered.

CONSIDERATIONS:

1. Delay Time
2. Rise Time
3. Attenuation
4. Impedance
5. Distortion
6. Temperature Coefficient
7. Package Design

Of these seven parameters, rise time, delay time and attenuation are closely related and have a major effect on the complexity and cost of a delay line.

Rise time of catalog items are specified as a maximum. The Td:Tr ratio is probably the most important factor in determining the cost of a delay line, since it determines the number of sections required. To overspecify this ratio is costly.

The increase in the number of sections can grow at a rate of 2 to 4 times the Td:Tr ratio. As the sections increase, their individual section efficiency decreases. To compensate for this, more complex section designs are required and consequently the costs increase.

Since input pulse width may considerably affect the design of a delay line, this parameter should always be given. As a rule of thumb, the width of the input pulse should be at least two times the required delay line rise time to avoid added attenuation or special design.

Normally, rise time measurements are made from 10% to 90% of the leading edge of the delayed pulse; however, in some applications, the rise time between two other intermediate amplitude levels on the leading edge may be more pertinent to circuit requirements. When this is the case, rise time may be specified as being read between the 20% to 80% points, etc. All catalog item rise times are specified between the 10% and 90% points.

Attenuations typically are from .2 to 3db depending on delay and compactness of the line. Special core materials are available for extremely low attenuation. Bel Fuse can generally, lower the attenuation simply by increasing case size slightly. This has a negligible effect on cost. Attenuation is generally specified as a maximum. Generally, as the attenuation in a delay line is decreased, the complexity and cost increase. With input pulse characteristics which obey our rule of thumb, the attenuation of the output pulse is dependent mainly on the individual inductor design.

The maximum input amplitude will be limited by the dielectric strength of the capacitors or the saturation point of the inductors. The problem of inductor saturation, however, occurs more often with relatively long delay lines. A more serious consideration is the size of the overall package. It is well to remember that lower voltage capacitors can be obtained in smaller sizes than the higher voltage capacitors. Working voltage is specified as a minimum. Catalog items with a prefix 0430, 0431, 0433, 0440, and 0448 are rated at 100 volts operating. All other catalog prefix numbers are rated at 50 volts operating.

GENERAL CHARACTERISTIC OF CATALOG ITEMS AND CONSIDERATIONS FOR SPECIFYING DELAY LINES

(continued)

Bel Fuse produces delay lines with impedances ranging from 50 to 2000 ohms. Impedances from 20 to 10,000 ohms are available on special order. The easiest and most straight-forward impedance parameters are between 50 and 500 ohms. Typical tolerances are 3%, 5% and 10%. All catalog items are specified at ±10% for impedance.

Distortions typically run 10%. Bel Fuse can supply delay lines with distortions as low as 2%. It should be remembered that distortions are input rise time dependent; i.e., a delay line which exhibits a distortion of ±10% with a 3ns input rise time may show only ±5% distortion with a 10ns input risetime. If distortion is to be reduced on a given line, cost will increase.

Bel Fuse delay lines are available with delays as low as 1 nanosecond (1 x 10^{-9} sec. and as high as 50 microseconds (1 x 10^{-6}). Normal delay tolerance is ±5%. A tolerance tighter than ±5% will, of course, increase the unit price. Tapped delay lines, listed in the catalog have a delay tolerances tap to tap of less than ±10%.

Bel Fuse can also provide delay line packages consisting of several increments with one common ground, and the input/output taps of each increment brought out for external connection.

Another major factor affecting delay line costs is the temperature coefficient (TC). The more economical design is achieved when TC for the delay line is ±50 PPM/°C or higher. An operating range of —25° to +85°C is suggested for all catalog part numbers with a prefix of 0414, 0420, 0430, 0431, 0433, 0440 and 0448. An operating range of —55°C to +125°C is suggested for part numbers with a prefix of 0404, 0432, 0444, 0445. Catalog part numbers prefixed 0404, 0432, 0444, 0445, and 0046 have a TC of 50 PPM/°C. Catalog part numbers prefixed 0414, 0420, 0430, 0431, 0440, 0448 have a TC of 100 PPM/°C.

The final factor that should be considered in specifying delay lines is package design. The physical lead configuration of a delay line is almost the same as its schematic configuration. For minimum costs, the package design and pin designation should correspond to the basic internal layout of the delay line circuit board design. If the printed circuit board design establishes a tangled pattern for terminal locations, the package complexity may increase substantially and drive costs up.

If possible, size should be suggested in limits rather than in a fixed dimension, so that Bel Fuse might select a standard package, resulting therefore in a lower cost.

bel defining a degree of excellence

APPLICATION OF BEL FUSE PRECISION DELAY LINES IN DATA PROCESSING EQUIPMENT

PULSE SHAPING/CLOCK PULSE GENERATION

The operation and application of high speed integrated circuitry with logic propagation times in the range from 2nsec to 20nsec requires the conversion of logic edges to pulses and the generation of accurately controlled clock pulses. BEL FUSE'S distributed parameter and lumped constant delay lines allow these functions to be performed in close proximity to the actual logic circuits and in the same packaging technology employed by the logic circuit set. BEL FUSE'S DIP delay lines can be automatically inserted into circuit boards along with integrated circuit DIP logic circuits.

In large scale third generation computer systems clock pulses are distributed to many different points within the data processing hardware over large distances. Pulse degradation due to attenuation, logic skew, spurius noise, etc, can cause intermittent system operation. BEL FUSE delay lines in conjunction with logic gates and/or flip-flops permit efficient means of local clock pulse REgeneration which contributes greatly to the preservation of the integrity of logic system.

Figure 1 shows two application methods of the use of BELFUSE delay lines for pulse shaping and clock pulse generation.

INTEGRATION OF ASYNCHRONOUS LOGIC OPERATIONS

A parallel processing techniques utilizing several different and independent operation logic function units can be a very efficient approach. Typically the functional units are under the control of one master control unit. The master control unit dispatches data and/or commands to be processed to several function units simultaneously. The resultant overlapping of processing operations results in significant improvement in overall system operation and thruput as compared to sequential processing techniques.

Due to the fact that the independent, asynchronous logic function unit response times differ from each other and in fact are variable in some cases, a problem arises when the master control unit samples their processed outputs because their outputs are available at different times.

Precision BEL FUSE delay lines can be employed to compensate for the various response times of the asynchronous logic units so that on a precision timing basis the combined results are made available for sampling by the master control unit and a data skew problem is eliminated.

Figure 2 is a functional block diagram of a typical parallel processing system employing precision BEL FUSE delay lines as a response time variance compensation device.

DELAY LINES

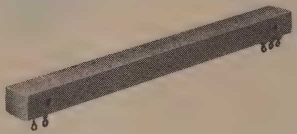
WITH OR WITHOUT CIRCUITRY

MAGNETOSTRICTIVE ★ LUMPED CONSTANT ★ ULTRASONIC ★ DISTRIBUTED CONSTANT ★ DISPERSIVE STRIP

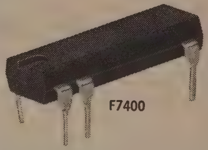
MAGNETOSTRICTIVE DELAY LINES — Fixed and variable delays to 10,000 microseconds. Fixed — FMS Series; Variable — VM Series.

FIXED MAGNETOSTRICTIVE DELAY LINE — Up to 10,000 bits of data for memory storage. Circuitry compatible with all microcircuit logic. Choice of data format: RZ, NRZ or Bipolar.

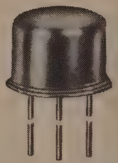


ULTRASONIC DELAY LINES — Replaces most quartz or glass lines. Offers superior performance, lower attenuation and smaller size at less cost. Frequencies to 30 MHz. Delays to 200 usec and greater.

SUBMINIATURE DELAY LINES



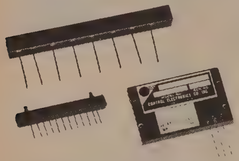
F7400



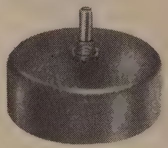
F-TO-5

TO-5 and micrologic packaged delay lines from 0.01 to 0.64 and longer delays. Ideal for timing transistors and other circuit components.

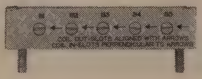
LUMPED CONSTANT DELAY LINES — Many shapes available including miniature types with pin connectors for PC Boards, connector fingers for plug-in units...multi-tapped units...terminal-ended units, etc. Delays from 0.05 usec to 500 usec for standard units. Delay to risetime ratios up to 100:1. Temperature stability to 50 ppm/C°.



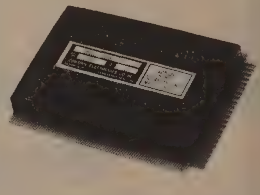
COMPACT FIXED DELAY LINES FOR PC BOARDS — Extremely high density packaging. Typical Unit: 25:1 delay-to-rise-time ratio in a volume of 2 cubic inches.



VARIABLE DELAY LINE
Resolution of 1 part in 120. Delay up to 10 usec. 1″ x 3″.

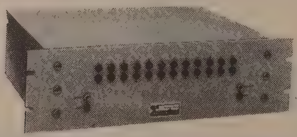


UNIQUE BINARY CODED SECTIONAL DELAY LINE — Uses miniature transfer switches. Also available with terminals for remote switching.



IFF MULTI-TAP DELAY LINES
Standard IFF delay lines with taps every 1.45 usec. High density packaging available for airborne transponder use.

AUDIO, HIGH FREQUENCY & DISTRIBUTED CONSTANT DELAY LINES — With unusual circuits, extreme delays, high frequency application, rapid rise times, conforming waveform circuits and corrective circuits. Write for complete details.



AUDIO DELAY CABINET — Relay rack mounted cabinet houses 25 millisecond delay with taps at every ms. Units can be cascaded for longer delays.

DISPERSIVE STRIP DELAY LINES — Delay varies with frequency. A prime application is in Pulse Compression Radar Systems, eliminating large, expensive filter components. Compression ratios of 150:1, typical.

SHORT FORM CATALOG

DUAL-IN-LINE DELAY LINES SERIES 1500 & 1501

SPECIFICATIONS

- Taps available
- Td/Tr ≥ 3/I and 2/I series 1501 & 1500 respectively
- Withstanding voltage – 100 vdc for series 1500; 50 vdc for series 1501
- Longer cases available for longer delays

DIP-TAPPED DELAY LINE SERIES 1519

SPECIFICATIONS

10 TAPS

DATA DELAY DEVICES

STOCKED

- Delay accuracy – ±5% (others on request).
- No. taps – 10 Equally spaced taps.
- Taps accuracy – ±5% of tap delay.
- Impedance tolerance – ±10% (others on request).
- Rise-Time – 20% of time delay.
- Withstanding voltage – 50 Vdc. Min.
- Temperature coefficient – 100 PPM/°C.
- Environment – Meets or exceeds MIL-D-23859C.
- Overall case height – 0.280 inches.

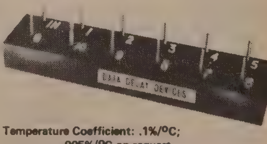
TAPPED DELAY LINES

SERIES 8000



SPECIFICATIONS

Delay Accuracy: ± 2%
No. Taps: 10
Terminals: Printed-circuit type, spaced 0.2 inches
Impedance accuracy: ± 5%
Distortion: ± 5%
Temperature: – 55° C to 125° C
Temperature Coefficient: .1%/°C; .005%/°C on request
D.C. Working voltage: 200 vdc
Case: epoxy encapsulated

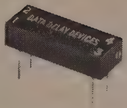
TRIM-DIP DELAY LINES SERIES 1503



SPECIFICATIONS

- Continuously variable delay
- Multi-turn adjusting screw (40 turns approx.)
- Delay (see table)
- Impedance (see table)
- Rise-time (see table)
- Withstanding voltage – 50 Vdc
- Temperature Coefficient – 100 PPM/°C
- #20 gauge leads
- Resolution – .12NS approx.

STOCKED

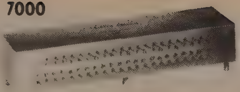
AUDIO DELAY LINES SERIES 7000



SPECIFICATIONS

TOTAL DELAY: See table. TAP DELAY: Normal IN and OUT (100 taps can be accommodated). DELAY ACCURACY: ± 3% (± ½% on request). IMPEDANCE: 200 to 10,000 ohms. ± 5%. ATTENUATION: 6 db or better. PHASE RESPONSE: ± 1% over bandwidth. TEMPERATURE RANGE: -55°C to +125°C. TEMPERATURE COEF.: ± 50 PPM/°C (± 15 PPM/°C on request). WORKING VOLT.: 200 WVDC (400 WVDC on request). CASE: Vertically sealed metal. SIZE: 5.75 x 3 x 2 (14.6 x 7.67 x 5.10 cm). MOUNTING: 4 - 10 - 32 x .25 studs, spaced 3.5 x 2. TERMINALS: Glass-to-metal or press-fit.

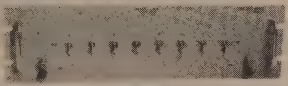
STEP VARIABLE DELAY LINES SERIES 510,511,1510,1511



DESCRIPTION

L-C networks in tandem, with precise delay increments and low attenuation. Use as delay syntesizers for evaluation of Worst-Case design analysis; as time delay standards and Phase measuring devices. Meets Military specifications. Type 510 and 511 use a single 10 positions switch.

SPECIFICATIONS

ACCURACY: ± 2% of setting. ATTENUATION and *TIME DELAY see table. *RISE TIME: 2% of time delay or less. TEMPERATURE COEFFICIENT: ± 50 PPM/°C. DISTORTION: Less than 3% for pulse signals on most types. Essentially no harmonic distortion for sine wave signals. SIZE: 8 x 3.5 x 4.5 (20.32 x 8.89 x 11.43 cm) Max. for type 510 and 511. 16.75 x 5.25 x 5.5 (41.54 x 13.33 x 13.97 cm) Max. for type 1510 and 1511 (Rack-Mount Panel available on request).

*other can be provided on request.

CONTINUOUSLY VARIABLE DELAY LINES SERIES 500

SPECIFICATIONS

DELAY VARIATION: 0 to 10 shaft rev. ACCURACY: ± 3% or better. BANDWIDTH: f(3db)=.35/TR. IMPEDANCE TOLERANCE: ± 10% or better. OPERATING TEMPERATURE: -60°C to +125°C. TEMPERATURE COEFFICIENT: 50 PPM/°C for type 500. 170 PPM/°C for type 501. CASE: plastic. DIMENSION: 6.5 x 1.56 x 1.12 (16.5 x 3.96 x 2.85 cm). SHAFT: .25 dia. (.635 cm). MOUNTING: 2 - 6 - 32 centered on 1.56 side, spaced 6.25.

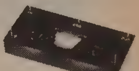
ELECTRICALLY VARIABLE DELAY LINES

SERIES 300



SPECIFICATIONS

DELAY VARIATION: 30% or more of total delay. DELAY TRACKING: ± 4%, ± 1% if control signal is sawtooth. DELAY/VOLTAGE LINEARITY: Normally non-linear. FREQUENCY RESPONSE: 5 MHz. Max. DELAY/RISE TIME RATIO: 10/1 (other to specification). MAXIMUM CURRENT: 50 MA. IMPEDANCE VARIATION: Less than 4%. VOLTAGE SWING: 0-20V max. ATTENUATION: Less than 2db over the voltage swing. SIZE 5 x 1.25 x 1.25 (12.7 x 3.17 x 3.17 cm) max. CASE TYPE: Epoxy. TERMINALS: #18 gauge pins, .25 long.

PART NO.	DELAY CHANGE (μs)	MAX DELAY (μs)	MIN DELAY (μs)	VOLTAGE RANGE	IMPEDANCE (Ω)	MAX RISE TIME (μs)

DATA DELAY DEVICES

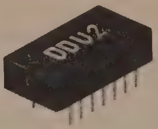
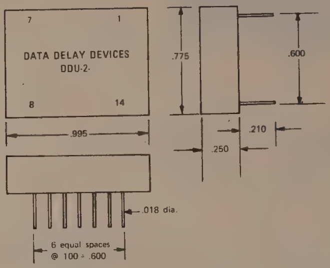
253 CROOKS AVE., CLIFTON, N.J. 07011 Tel. (201) 772-1106

DIGITAL DELAY UNIT
LOW PROFILE

SERIES:
DDU-2





FEATURES

- Completely interfaced for TTL and DTL application.
- No external components required.
- P. C. board space economy achieved.
- Low profile.

SPECIFICATIONS

- **Delay tolerance:** ±5% or better.
- **Rise-Time:** 4 NS typically.
- **Temperature coefficient:** 100 PPM/°C.
- **Temperature range:** −55°C to +125°C.
- **Supply voltage:** 4.5 to 5.5 Vdc.
- **Logic 1 input current:** 50 ua max.
- **Logic 0 input current:** −2 ma max.
- **Logic 1 V out:** 2.5 V min.
- **Logic 0 V out:** 0.5 V max.
- **Logic 1 Fan-out:** 20/tap max.
- **Logic 0 Fan-out:** 10/tap max.

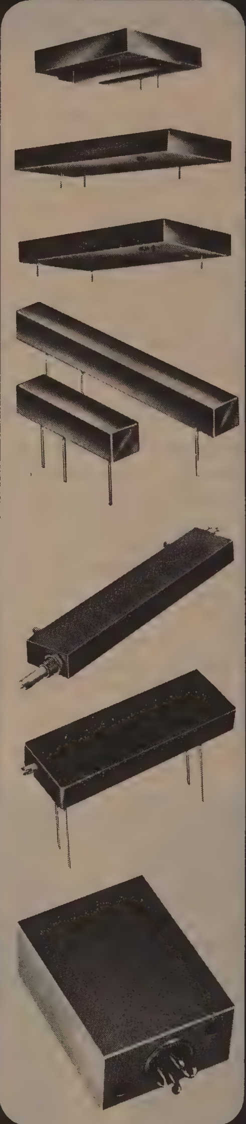
ESC The World's Leading Producer of Electromagnetic DELAY LINES

DUAL-IN-LINE DELAY LINES	EC Series: From delay (T) of 5 ns and rise time (tr) of 2.5 ns to T = 25 ns and tr = 10 ns, Impedance (Z) = 200, 300, 400 or 500 Ω Size: .66 x .250 x .250 EP Series: From T = 20 ns to 50 ns, tr = 5 ns to 12.5 ns, Z = 200, 300, 400 or 500 Ω Size: .46 x .76 x .25 EL Series: From T = 50 ns to 100 ns, tr = 8.5 ns to 17 ns, Z = 200, 300, 400 or 500 Ω Size: .46 x 1.40 x .25 *Request Bulletin — ECPL* D Series: (Low temp. coeff. of Delay Types) From 20 ns to 100 ns, T/tr = 3.3, Z = 100 Ω or 200 Ω Size: .46 x .76 x .25 E Series: (Low temp coeff. of Delay) From 50 ns to 500 ns, T/tr = 6, Z =100 Ω or 200 Ω Size: .46 x 1.4 x .25 F Series: (Low temp. coeff. of Delay) From 100 ns to 1000 ns, T/tr = 10,Z = 100 Ω or 200 Ω Size: 1.0 x 1.5 x .25 *Request Bulletin — DEF*
DISTRIBUTED CONSTANT DELAY LINES	Delays from 20 ns to 1100 ns, tr from less than 20 ns to 120 ns depending upon delay. Impedance from 100 to 1800 Ω. *Request Bulletin — DC*
SUB-MINIATURE NANOSEC DELAY LINES	SM Series: T = 10 ns to 50 ns at Z = 100 and 200 Ω; T = 100 ns to 300 ns at Z = 500 Ω T/tr = 3.5 average; Size = 1 x .32 x 32; T = 50 ns to 120 ns at Z=100 and 200 Ω and T = 400 ns to 1200 ns at Z = 500 T/tr = 5 to 10; Size 2 x .32 x .32 *Request Bulletin-SM*
TAPPED DELAY LINES	Delays of 100 ns to 1000 ns; tapped in 10 or 20 equal increments tr = 10 ns for T = 100 ns to 55 ns for T = 1000 ns, Z from 50 Ω to 200 Ω; Size 1 x 3 x .35 for 100 and 200 ns delay; 1.25 x 5 x .35 for longer delays. *Request Bulletin-T*
PROGRAMMABLE DELAY LINES	Adjustable constant Impedance lines with increments arranged in binary order; resolution is the smallest increment. Total delay from 125 ns to 1000 ns with resolution of 5 to 40 ns; tr = 10 ns to 80 ns; Z = 100, 200 or 500 Ω Size: .875 x 3.0 x .45 *Request Bulletin — PR*
STANDARD MIL TYPE LUMPED CONSTANT DELAY LINES	Chassis mounting, steel enclosures, delays range from 1.0 µsec to 50 µsec, Impedance 50 Ω to 2000 Ω; T/tr from 10 to 50. Specs per MIL-D-23859 Slash sheets. *Request Bulletin — MIL*
CONTINUOUSLY VARIABLE DELAY LINES	400 Series: T = 100 ns to 700 ns; tr = 30 to 95 ns; Z = 100 to 1500 Ω Metal encased, Size: 6 17/32 x .66 x 1 1/4 500 Series: T = 1.0 to 12.0 µsec; tr = .15 to 1.9 µsec; Z = 75 to 1000 Ω Metal encased, Size: 7 1/4 x 1 x 1 5/8 *Request Bulletin-400/500* 700 Series: T = .125 to 1.5 µsec, tr = .03 to .1 µsec, Z = 75 Ω to 1800 Ω Metal encased, Size: 4.5 x .5 x 1.51 800 Series: T = 10 to 280 ns; T/tr = 4 for size 2.25 x .75 x .35 and T/tr = 7 for 4 x .75 x .35, P.C.B. mounting, Epoxy enclosure. ("Trimline" TM) 900 Series: Size: .76 x .46 x .25 for T = 5, 10 and 20 ns with T/tr = 2 to 2.5 for T = 30, 40 and 50 ns with T/tr = 3.3 Size is 1.5 x .46 x .25 Z is 200 and 300 Ω Epoxy enclosure for P.C.B. mounting. ("Mini-Trimline" TM) *Request Bulletin — 700/800/900*
HIGH DENSITY PC MOUNTING DELAY LINES	For delays of .5 µsec to 10.0 µsec with T/tr from 18 to 29 Size is 2 x 2 x .4. For delays of 15 µsec to 30 µsec with T/tr = 40 Size is 2.75 x 4.2 x .65.Z varies from 50 Ω at shorter delays to 500 Ω for longer delays. *Request Bulletin — PC*
EXTENDED DELAY/RISE TIME DELAY LINES	Delay/Rise time from 100 to 250; T = 10 µsec to 100 µsec; Z from 75 Ω to 250 Ω. Volume is 91 to 294 cu. in. depending upon T/tr. *Request Bulletin-HP*
MILLSECOND DELAY LINES	Delays from .1 msec to 5 msec; T/tr = 25, 33 and 50; Z = 500, 1000 and 2000 Ω; Volume is from 40 to 162 cu. in., hermetically sealed metal cased construction. *Request Bulletin — MS*



The lines described above represent only a small segment of our total design capability. ESC also designs and manufactures, typically . .

VIDEO	Fixed programmable and mechanically-variable delay lines for the TV broadcast industry, including video cable simulators and voltage variable delay lines.	**SONAR**	Delay lines used in beam forming systems. These units are manufactured to precision tolerances and are supplied in matched sets or groups.
HI-REL	Proven design, manufacturing capabilities, and facilities encompassing all quality levels dictated by MIL-I-45208 and MIL-Q-9858A.	**ATC**	Precision tapped delay lines for Air Traffic Control systems of all types, IFF, Beacon Systems, Tacan, Vortac, etc.

CUSTOM DELAY LINES

MODEL	DESCRIPTION
54-67	**29 μs High Density Package** for DME applications provides a maximum rise time of 2 μs at a 400 ohm impedance. Attenuation is 2 db and size is 3 x 1½ x ¼.
81-64	**1213 μs Dual Polarity Balanced Delay Line.** Delay accuracy is ±1% and the nominal impedance is 1100 ohms. It features a low attenuation of 1 db max and the maximum operating frequency is DC to 6 Khz.
62-45	**Sonar Precision Tapped Delay Line of 566 μs** used for beam forming. Tolerance on delays is ±0.5% and operating frequency range is 700 to 2500 Hz. The attenuation of 35 db is controlled to within ±0.2 db.
81-59	**5000 μs Delay Line** with rise time of 70 μs in only 125 cu. inches. Impedance is 1000 ohms; attenuation 12 db max.
55-27	**High Delay-Bandwidth product** of 95 for a delay of 31.52 μs is feature of this item. Impedance is 75 ohms and attenuation is 20 db. Delay linearity from DC to 0.5 Mhz is ± 40 ns, .5 Mhz to 1 Mhz is ± 60 ns and from 1 Mhz to 3 Mhz is ± 100 ns. Size 8 x 5 x 16.

MODEL	DESCRIPTION
75-06	**Miniature Mechanically Variable Delay Line** features highest performance. The maximum time delay is 50 ns and a maximum rise time is 5 ns. The impedance is 50 ohms and package dimensions are 2.5 x .7 x .35.
75-45	**Electrically Variable Delay Line** has a nominal delay of 3.1 μs and is electrically variable from 2.55 to 3.6 μs. The bandwidth is suitable for processing television video signals up to 7 Mhz. Peak to peak ripple is less than .2 db and the average goup delay is 25 ns maximum.
62-40 62-41	**Non-Linear Precision Matched** multiple section delay lines with delay varying parabolically with frequency and delay-matched between sections and any combination of sections to within .25%. Delays cover ranges of 100 to 400 μs.
14A89	**Programmable Line** consisting of 4 sections of 750, 80, 40 and 20 ns, delay linearity up to 6 Mhz is ± 8 ns and from 6 Mhz to 8 Mhz is ±16 ns. Impedance is 150 ohms and size is 8 x 2½ x ½.

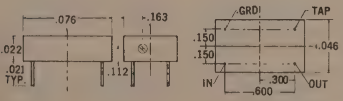
VARIABLE DELAY "DUAL IN-LINES" DIP SERIES L-61



RCL offers for the first time, a variable delay line in a Dual In-Line package.

- Hermetically sealed construction
- Precious metal contacts
- Resolution: 2% for highest possible reliability performance

Delay lines meet applicable portion of MIL-D-23859.

Short run production facilities can produce prototype quantities in exceptionally short lead time.

TYPICAL EXAMPLES:

RCL Type No.	Delay Range (Max. nsec.)	Rise Time (nsec.)	Impedance ohms (±10%)
L-61-10	0-5	5	100
L-61-11	0-20	15	200
L-61-12	0-30	20	350
L-61-13	0-40	25	500

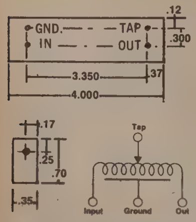
When ordering, lead length should be specified (½" nominal).

VARIABLE DELAY LINES — Series L-62

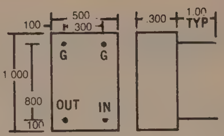


For applications which require adjustable delay time in the operating circuitry. The units are sealed against moisture and contamination. The adjusting shaft is equipped with a watertight "O" ring seal.

10 Turn Adjustment

RCL Part No.	Delay Range nsec.	Impedance ohms	Rise Time Max. nsec.
L-62-10	10-250	1000	40
L-62-11	10-200	200	40
L-62-12	0-300	750	60
L-62-14	5-80	300	20
L-62-15	10-250	500	60

For other variable delay lines consult our Engineering Department.

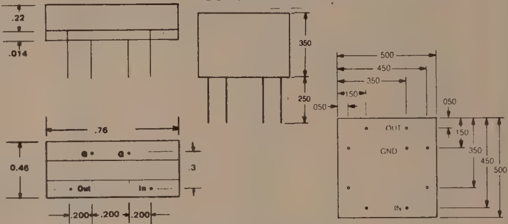


MINIATURE DELAY LINES Series L-04

RCL Part No.	Delay nsec. (±5%)	Rise Time nsec.	Impedance ohms (±10%)	Distortion %	Attenuation %	Working Voltage (max.)
L-04-10	20	3	100	10	10	100
L-04-11	25	4	100	10	10	100
L-04-12	40	6	100	10	10	100
L-04-13	50	8	100	10	10	100
L-04-14	75	12	100	10	10	100
L-04-15	100	20	100	10	10	100

Other tolerances on request.

SUBMINIATURE DELAY LINES Series L-05 & L-06



TYPICAL EXAMPLES:

RCL Part No.	Delay nsec.*	Rise Time nsec.	Impedance† ohms (±10%)
L-05-10	25	10	100
L-05-11	50	20	100
L-05-12	100	46	100
L-05-13	200	80	100
L-05-14	30	16	200
L-05-15	50	18	200
L-05-16	200	80	200
L-05-17	50	20	500
L-05-18	200	80	500
L-05-19	100	46	1000
L-05-20	500	200	1000
L-06-10	4	2.5	50
L-06-11	16	3	50
L-06-12	20	4	50

Distortion: 10% all-encompassing

Attenuation: 10%

Working Voltage: 100V

Temperature Coefficient: 70 ppm/°C max. −55° to +125°C

Mil Spec: Meets or exceeds all applicable sections of MIL-D-23859.

In addition to the above examples of Delays, many others are available on request.

* ±1 nsec. or ±10%, whichever is greater.
† Other impedances available.
Other tolerances on request.

RCL SPECIAL VIDEO DELAY LINES (RCL SERIES VL)

Designed to equalize and/or synchronize color television signals. These lines are especially designed to fulfill existing stringent specifications in regard to frequency and phase response within the color television frequency band 405, 525 and 621 line color video systems.

Specialized design feature and test instrumentation are applied. The visual display of frequency and phase response using sophisticated test equipment makes it possible to manufacture video delay lines to precise performance specifications.

These lines are used in color TV cameras and recorders. In addition, similar delay lines are used for studio work, to either replace or equalize bulky cable lengths. These cable replacements are normally 75 ohm lines with either standard terminals or BNC coaxial plugs.

Precise loss pads are also available for 75 ohm lines equipped with BNC plug and jacks for easy coupling between cables and delay lines. Test specifications are either expressed in Amplitude and Delay ripple response, or T Pulse response for a specified k factor.

electromagnetic delay lines

AUDIO DELAY LINES
RCL Series L1100

RCL Audio Delay Lines are custom designed and manufactured to the most stringent specifications. The electrical performance, due to advanced design techniques, classical and synthesis network theories, insures the ultimate in precision performance.

ENGINEERING FEATURE:
Envelope delay of better than 0.1% in the mid-frequency region, and 0.2% in the 6 db fall off. The frequency characteristic is maximally flat with 0.1% frequency ripple.

Typical Delay range up to 10 milliseconds

Typical Delay-Bandwidth product up to 30

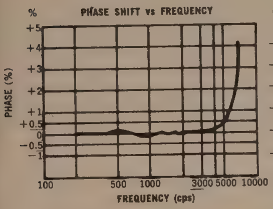
Typical Impedance 500 ohms to 1,000 ohms

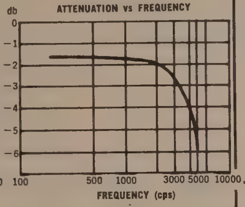
Typical Attenuation 0.001 to 0.003 per microsecond

Units are normally housed in standard rack type mounting cabinets.

A typical example of electrical performance for a delay line of 5 milliseconds is indicated in the following graphs:

Any tap spacings available upon request.





ELECTRICAL VARIABLE DELAY LINES

Voltage and Current Type

The Electrical Variable Delay Line (EVDL) is basically a Lumped Constant Delay Line (LCDL) with the same design approach as outlined for LCDL's.

The capacitive or inductive element is voltage or current sensitive, respectively.

Normally EVDL are defined by an inherent Center delay at a specified Bias input and a % deviation of Delay from Center.

Modern EVDL's are generally voltage controlled, with infinite resolution, and excellent frequency and phase response over the specified delay variation.

EVDL's are used as Vernier devices, either manually or automatically adjustable, also as phase modulator of fast response.

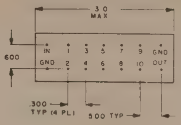
The precision performance of the voltage controlled EVDL makes it a reliable device for tape compensation in color television recorders.

Carrier frequencies: Up to 70 MHz and phase modulation of up to 1 MHz, for automatic adjustments of Delay of quartz or glass delay lines, due to temperature variation. Expensive temperature compensators can be avoided.

Control voltage inputs: Either single or push-pull, low or high impedance.

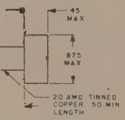
Carrier voltage inputs from 50 to 1000 ohms impedance.

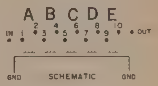
MODULAR DELAY LINES
Series L-44
Multiple Discreet Delay Lines in a Single Package



SPECIFICATIONS:

- Operating Temperature: −55°C to +125°C
- Attenuation: 1 db
- Distortion: ±10%
- Temperature Coefficient: 100 ppm/°C
- Dielectric Strength: 100 VDC
- Delay Tolerance: ±5% or ±3 nsec, whichever is greater.
- Impedance: ±10%





Part No.	Ohms Impedance	Time Delays (nsec.) A	B	C	D	E	Total	Total (nsec.) Rise Time

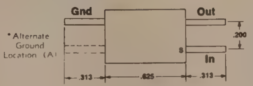
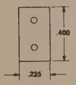
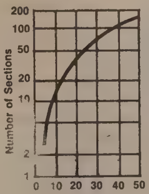
ECONOLINE DELAY LINES
Series L-09







Lumped Constant, Econoline Modules are designed primarily for computer applications where large quantities of low cost time delays are required. Eleven different time delay values between 10 and 200 nanoseconds are available in this new modular form. Each module unit is a single time delay section. The required total delay and delay to rise time ratio can be obtained by simply interconnecting a number of modules. The accompanying chart shows how to select the proper module values.

Econoline Delay Line Modules are also ideal for prototypes and breadboard circuits. Single modules can be connected together on a circuit board with taps available at each connection point, if needed.

Econoline Delay Line Modules should be used in applications where pulse distortion and tolerance are not critical. They provide a convenient low cost time delay for commercial and industrial usage.

SELECTION CHART

The chart above can be used to determine the number of modules required to provide a desired delay and rise time.

1. Determine the delay to rise time ratio by dividing the desired time delay by the desired rise time.
2. Using the chart determine the number of sections required for this T_d/T_r.
3. Divide this number of sections by the total delay to determine the delay per section.

Total delay is the sum of the individual section delays. It can be trimmed to the desired value by selecting the proper value of the last module.

RCL Part No.	Delay nsec. (±10%)	Impedance ohms (±10%)	Attenuation db (max.)	Working Volt. (max.)

ENGINEERING AND MANUFACTURING CAPABILITY

RCL Electronics designs and manufactures lumped constant, distributed constant and variable delay lines. We pride ourselves on the quality of our product, the extent and quality of our test equipment and the high caliber of our engineering staff. All of these capabilities have only one purpose—to provide you with the finest delay lines available at the lowest price consistent with quality. Our staff and facilities are always available to help you. The first and most important step in selecting a delay line might well be a call to RCL Electronics for an engineer-to-engineer discussion of your delay line requirements. Our engineering staff includes some of the most experienced delay line engineers in the industry. They will promptly tell you what's available in delay lines to solve your problem.

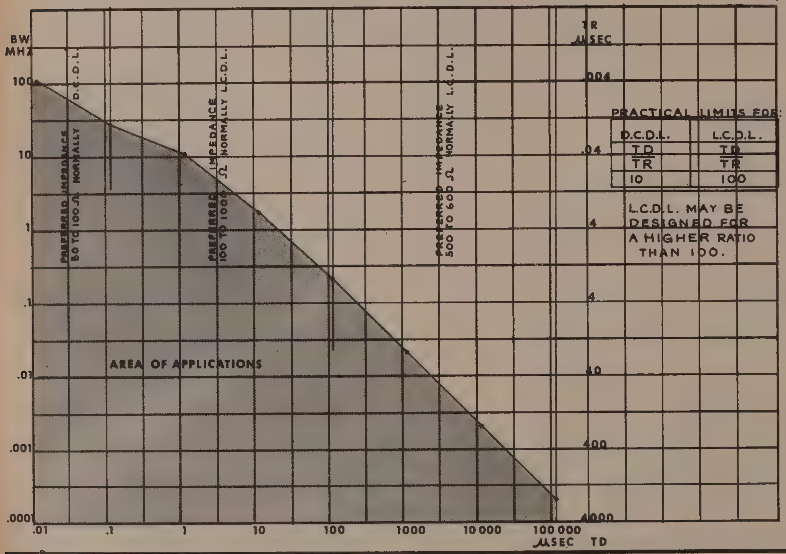
Quality Assurance

Stringent process controls are enforced at RCL to insure the highest quality levels and maximum reliability of all delay lines. A quality assurance department performs continual in-process inspection and monitors all final testing operations. Periodic checks are made on environmental specifications and material analyses. A comprehensive study is made of all failures and field problems to insure maximum product quality consistent with cost. RCL has participated in many high-reliability military programs in their quality assurance department.

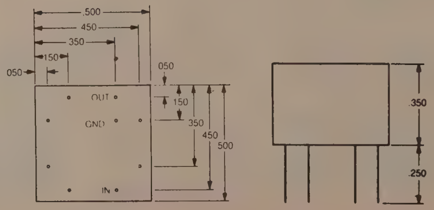
CUSTOM DELAY LINES

When one of the standard RCL delay lines will not meet your specific requirements a custom delay line can be designed for your application. For example, practically any kind of AUDIO and VIDEO delay lines are available, manufactured to the customer's specifications. When considering the specifications for your custom delay it is recommended that you call on an RCL engineer for his advice and recommendations. RCL employs the most experienced delay line engineers in the industry and his advice could result in your obtaining a better unit at less cost. When required, a detailed laboratory report accompanies prototype custom delay lines. Oscillograms of the actual delay line under test and the exact test procedure are part of the report. With the aid of the oscillograms a customer has concrete evidence for comparing his test results with the RCL report.

PRACTICAL LIMITS OF ELECTRO MAGNETIC DELAY LINES



SERIES L-06



Distortion: 10% all-encompassing.
Attenuation: 10%.
Working Voltage: 100 V.
Temperature Coefficient: 70 PPM/°C max. −55°C to +125°C.
Mil Spec: Meets or exceeds all applicable sections of MIL-D-23859.
In addition to the above examples of Delays, many others are available on request.

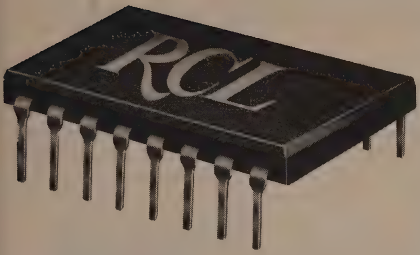
delay line driver



RCL Part No. DLD

A device that replaces circuitry, which often must be introduced to drive delay lines ... New from RCL.

Totally compatible with TTL logic, the devices are designed to drive delay lines with characteristic impedances of 50 to 350 ohms.

Operating temperature range is - 40°C + 85°C. Storage temperature range is - 25°C to + 125°C.

With switch characteristics at full load, using 50 ohms, 125 nsec delay line, rise time to logic "1" is 9 nsec, and fall time to logic "0" is 5 nsec. Propagation delay to logic "1" level is 9 nsec.

Input Signal Characteristics At +25°C

INPUT VOLTAGE		INPUT CURRENT
Threshold Level		Threshold Level
LOGIC "1"	+2.0 Vmin.	1.5 ma max.
LOGIC "0"	+0.8 Vmin.	-2.6 ma max.

Input Pulse Characteristics:

Pulse width is 30 ns min. (50% points)
Risetime and falltime is 20 ns max.

Output at +25°C

Load is 50 ohms paralleled by 120 pf

Voltage at full load:
Logic "1" is +3.2 V nominal
Logic "0" is +0.080 V nominal
Current capabilities: Source and sink is 120 ma

Switching Characteristics At Full Load

	LOGIC "1"	LOGIC "0"
Rise Time	9ns	5ns
Propogation Delay	9ns	5ns

Power at +25°C

VCC is +5.0 V + 0.5 V
Power is 85 mw with no load and 110 mw loaded
(50% duty cycle, max load)

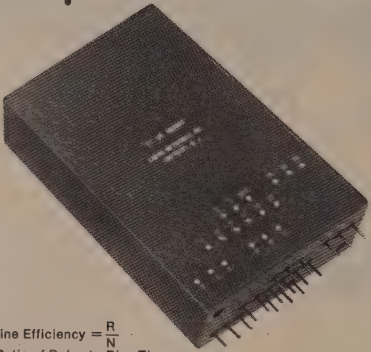
PRECISION SONAR DELAY LINES / SERIES A

The basic design of this series incorporates unsymmetrical Pierce sections with precisely controlled equalization. These sections consist of closely matched high Q inductors and precision tolerance capacitors to assure unsurpassed performance.

SPECIFICATIONS

Delay Range: from 500 μsec to 10^6 μsec ±1%
Delay Linearity: available to within ±0.05%
Bandwidth: 70 KHz maximum
Dielectric Strength: 100 VDC
Operating Temperature: −55°C to +125°C
Temperature Stability: under 50 ppm/°C

SUPER-η* DELAY LINES / SERIES H



*η = Delay Line Efficiency = $\frac{R}{N}$
where R = Ratio of Delay-to-Rise-Time
N = Required number of LC sections

SUPER-η LINES embody a new design principle providing the highest efficiency yet obtainable in lumped constant delay lines. Use of network synthesis techniques** rather than conventional m-derived methods result in sharply improved delay line efficiency. Compared to ordinary delay lines of the same delay-to-rise-time ratio, **Super-η** LINES use far fewer LC sections. For this reason these newly-developed lines provide such outstanding advantages as:

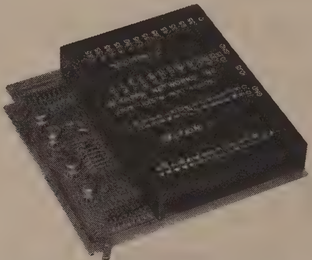
- Greater Inherent Reliability
- Smaller Package Size
- Appreciable Cost Reduction

**KAPPA Technical Report #TR-101

SPECIFICATIONS

Delay Range: 0.5 μsec to 500 μsec ±5%
Delay-to-Rise-Time Ratio: as required, up to 150
Delay Linearity: ±1%
Bandwidth: 70 MHz maximum
Distortion: ±10% maximum
Dielectric Strength: as required
Operating Temperature: −55°C to +125°C
Temperature Stability: 50 ppm/°C

TRANSPONDER LINES / TACAN LINES / DME LINES / SERIES C



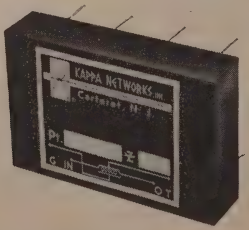
Designed to meet the requirements of MIL-D-23859 and to withstand the most rigorous military environments.

- Tap Selecion to Precise Tolerances
- Compact Packaging
- Used in Air and Ground Measuring and Signalling Equipment

SPECIFICATIONS

Tap-Spacing: as required
Tap Tolerance: as required
Delay-to-Rise-Time Ratio: 100 maximum
Delay Linearity: ±0.5%
Attenuation: from 1.5 to 6 db
Distortion: as required, to 1%
Dielectric Strength: as required
Operating Temperature: −55°C to +125°C
Temperature Stability: 50 ppm/°C or less

LOW DISTORTION LINES / SERIES D



Used primarily in precision instrumentation where high bandwidth and low distortion are critical considerations.

SPECIFICATIONS

Delay-to-Rise-Time Ratio: 50 maximum
Bandwidth: 50 MHz maximum
Dielectric Strength: as required
Operating Temperature: −55°C to +125°C
Temperature Stability: 50 ppm/°C
Distortion at Output: 2% maximum
Distortion at Taps: less than 5% at any tap
Distortion Limit: as low as 0.1% if required
Delay Range: up to 100 μsec
Standard Tolerances: ±1% on Delays ±5% on Impedance

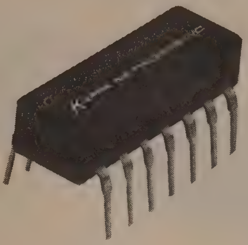
KAPPA NETWORKS, INC.

165 ROOSEVELT AVENUE / CARTERET, NEW JERSEY 07008 / TEL: (201) 541-1600

DUAL IN LINE / DELAY LINE SERIES DP

This series widely used in computer, radar and timing applications.

- Available with Tapped Delay Increments
- Plug into Standard Dual-in-Line Sockets or P.C. Board
- Manufactured and Tested to MIL-D-23859



SPECIFICATIONS

Delay Range: to 1000 nanoseconds
Distortion: 10%
Operating Temperature: −55°C to +125°C
Temperature Stability: 50 ppm/°C
Dielectric Strength: 100 VDC

MINIATURE NANOSECOND DELAY LINE SERIES KM

This series of lumped constant design, incorporates an advanced technique of packaging, to offer high figure of merit in small volume.

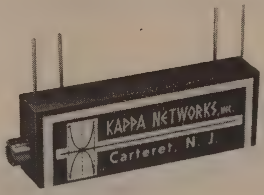
KAPPA NETWORKS, INC.

SPECIFICATIONS

Operating Temperature: −55°C to +125°C
Temperature Coefficient: 50 ppm/°C
Attenuation: 0.5 db maximum
Dielectric Strength: 100 VDC
Distortion (typical): ±10%
Meets MIL-D-23859

MINIATURE CONTINUOUSLY VARIABLE DELAY TRIMMERS SERIES TT

This Series is the smallest of its kind and is immediately available from stock. Intermittent-free operation is assured by KAPPA's unique contact design.



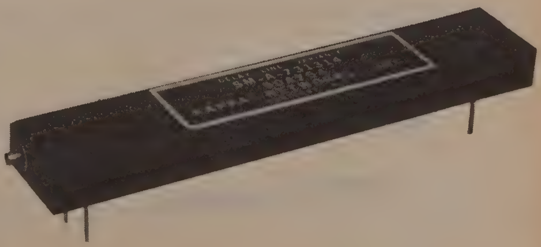
SPECIFICATIONS

Size: ¼ cubic inch
Delay Range: up to 120 nanoseconds
Resolution: −25 nanoseconds or less
Delay-to-Rise-Time Ratio: 4/1
Bandwidth To: 70 MHz
Attenuation: .25 db maximum
Distortion: ±15% maximum
Dielectric Strength: 100 VDC
Operating Temperature: −55°C to +125°C
Temperature Stability: 200 ppm/°C

MINITRIM DELAY LINE SERIES MT

This series available in both distributed and lumped constant design.

- Ideal for P.C. Board Insertion
- Wide Range of Delay
- KAPPA Minitrim Delay Lines are Designed for Circuits Requiring Precise Delay Adjustments



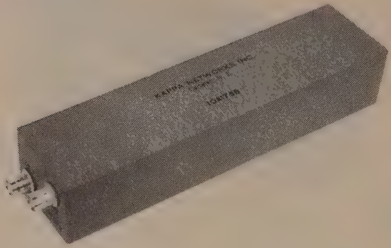
SPECIFICATIONS

Delay Range: up to 300 nanoseconds
Resolution: less than 1 nanoseconds
Attenuation: less than .5 db
Dielectric Strength: as required
Operation Temperature: −55°C to +125°C

KAPPA NETWORKS, INC.

165 ROOSEVELT AVENUE / CARTERET, NEW JERSEY 07008 / TEL: (201) 541-1600

VIDEO BROADCAST DELAY LINES SERIES BC



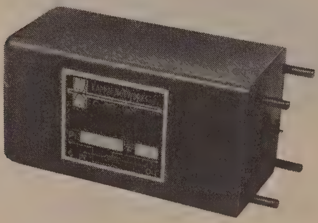
KAPPA Video Broadcast Delay Lines yield a greater delay-bandwidth from fewer components than conventional units, and their performance more nearly approaches constant delay at all transmitted frequencies than do conventional (m-derived) delay lines.

This performance has established their wide acceptance for use in the most demanding color television applications of American and European Systems.

SPECIFICATIONS

Delay Range: to 10 μsec
Impedance: 75 ohms ±2%
Linear Delay Bandwidth: to 14 MHz, Delays to 1 μsec
7 MHz, Delays to 5 μsec
5 MHz, Delays to 10 μsec

STANDARD LUMPED CONSTANT DELAY LINES SERIES LC



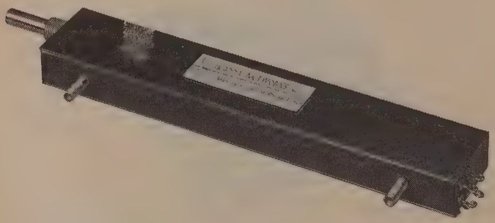
Most standard KAPPA Lumped Constant Delay Lines utilize either the highly efficient Golay or unsymmetrical Pierce designs. Equalization is precisely calculated and realized, fully accounting for variations in magnetic core permeability, distributed capacity and other variables. The resulting units exhibit the specified delay linearity tolerance to frequencies beyond the 3 db passband.

SPECIFICATIONS

Delay: 50 nanoseconds to 1 second*
Impedance: 20 ohms to 50 K ohms
Delay-to-Rise-Time Ratio: 150 maximum
Delay Linearity: ±0.5%
Bandwidth: DC to 250 MHz*
Distortion: ±10% or as required
Operating Temperature: −55°C to +125°C
Temperature Stability: 50 ppm/°C

*Subject to a limit on delay X bandwidth

CONTINUOUSLY VARIABLE DELAY LINES SERIES K



This series offer continuously variable delay lines of lumped constant design. Incorporating special contact feature for intermittent free variation.

SPECIFICATIONS

Delay Range: to 2.0 μsec
Resolutions: 1/1000 of total delay or 1 nanosecond whichever is greater
Delay-to-Rise-Time Ratio: up to 10:1
Attenuation: under 1.5 db
Dielectric Strength: as required
Operating Temperature: −55°C to +125°C
Temperature Coefficient Delay: 50 ppm/°C

STANDARD DISTRIBUTED CONSTANT DELAY LINES SERIES DC

These Delay Lines offer limited delay-rise-time ratio and small volume at lowest cost.

- Available for P.C. Board Insertion
- Short Delivery Cycle

SPECIFICATIONS

Delay Range: up to 3 μsec ±5%
Relay-to-Rise-Time Ratio: 11 maximum
Bandwidth: 30 MHz maximum
Distortion: ±5% typical, ±10% maximum
Dielectric Strength: as required
Operating Temperature: −55°C to +125°C
Temperature Stability: 200 ppm/°C maximum

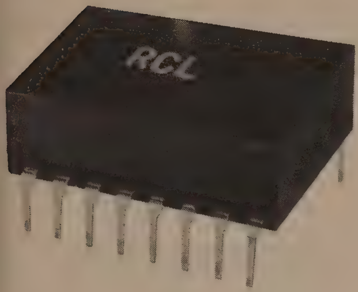
dual-in-line option blocks



For Micro Programming

Designed to be used for bussing or micro programming, such as code conversion and rate multiplication. The units can also be used as shorting modules for test fixture compensation.

- Δ 14 & 16 pin packages
- Δ Custom configurations are available
- Δ Shorting pattern may be modified by simply cutting off individual leads
- Δ Allows shorting of multiple arrangements of pins for various circuit applications on circuit boards using a standard DIP spacing.
- Δ May be used for bussing or micro programming, such as code conversion and rate multiplication.
- Δ Can be used as shorting modules for test fixture compensation.

TTL DELAY MODULE

TTL Delay Modules are designed to be used directly with super high speed TTL, standard TTL and DTL logic circuits. They provide many timing applications without any or minimum interface.

TTL Delay Modules can be cascaded to get any combination of delay without derating output rise time (T_R+ or T_R-). Delay to rise time ratio (T_D/T_R) of individual modules is very high (approximately 50:1) and improves with cascading modules. Output rise times of each module are independent of input rise times up to 50 nsec. Each module can handle input pulse widths as low as 15 nsec, (with ≤ 2.5 nsec, input rise times).

TTL Delay Modules are encapsulated by transfer molding. They are pin compatible with 74 Series TTL/SSI 14 Lead DIP Circuits. MIL version available for −55°C to +125°C operation.

Delay Characteristics @ Vcc = 5.0 volts, 25°C, No Load.

			Nanoseconds			All Taps	
Part No.	T_D1	T_D2	T_D3	T_D4	T_D5	T_R+ &	T_R-

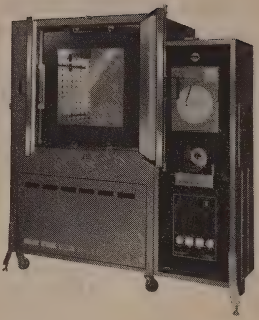
CONSTANT TEMPERATURE

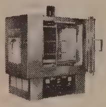


TEMPERATURE/HUMIDITY CHAMBERS

Full-Range Chamber illustrated typifies entire line. Maximum capability cabinets perform all current MIL humidity tests. Dual wet and dry bulb POWER-O-MATIC 60® Proportioning Control Systems assure absolute stability and reliability. Horizontal mechanical convection units feature programming, separate monitoring recorder, and built-in overtemperature protection. Range: −18°C. to +93°C. (±½°C.). Meets MIL-202D, Method 106C, Step 7A; automatically performs −10°C. dip without changing cams. Maintains R.H. ±½%. Chamber sizes: 5.8, 11, 27 and 64 cu. ft.

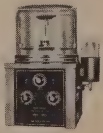
ALSO . . .

Full-Range Single Steady-State Chambers, new −38°C. Extended Range Cabinets, new +150°C. Steady-State Cabinets plus those described below. Acknowledged as the finest units of their kind ever built.



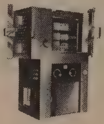
AIR-COOLED TEMPERATURE/ HUMIDITY CABINETS

Unique design lets air do the work, not costly conditioned water! The most accurate, reliable and economical chamber for long-term steady-state high temperature/humidity testing. Meets MIL-202D, Method 103D, Condition D — continuous operation for 56 days. Sizes to 10 cu. ft.



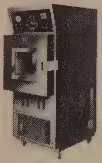
JAR TYPE CHAMBERS

Conduct many tests at once at lowest cost. Patented VAPOR-TEMP® design uses inverted Pyrex glass jar as work chamber, eliminating cost of expensive alloy cabinet. Controls humidity: 20%-98% (±1%); dry bulb: ambient to +77°C. (±½°C.). Also mechanically refrigerated models.



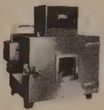
TESTONIC CONSTANT TEMPERATURE CABINETS

Versatile 0°C. to +204°C. (+400°F.) range, patented POWER-O-MATIC 60 Control and exclusive Versa-Kold Mechanical Refrigeration offer remarkable performance at a fraction of the cost of expensive wide-range chambers. Four sizes to 24 cu. ft.



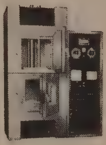
VERSA-RANGE® REFRIGERATED TEST CHAMBERS

Two versatile ranges: −73°C. to +204°C. and −40°C. to +93°C. Five chamber sizes—3 to 64 cu. ft. Patented POWER-O-MATIC 60 Control for incomparably reliable performance. Also −40°C. and −85°C. chest type units. Overtemperature protection.



STABIL-THERM® LN_2 CHAMBERS

Front or top opening models. −185°C. to +200°C. with solid-state instrumentation. Similar units with CO_2 as coolant have −73°C. to +300°C. range. Quality construction throughout, including overtemperature protection.



THERMAL SHOCK TEST CHAMBERS

Dual Cabinets for MIL-STD-202D and 883; 3-Stage Cabinets for MIL-STD-202D, Method 102A, Preferred Conditions C and D; Versa-Whirl Baths for MIL-STD-883, Method 1011, Conditions A to F. Latter available as an integrated, automated facility.

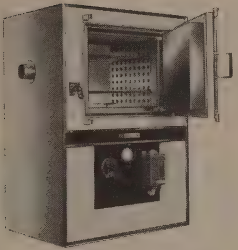
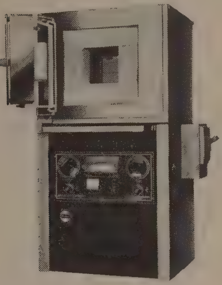
CONTROLLED EQUIPMENT

TYPICAL EXAMPLES OF AMERICA'S FINEST, MOST COMPLETE LINES OF OVENS AND FURNACES



FRICTION-AIRE™ — THE PATENTED ELECTRIC OVENS WITH *NO* HEATING ELEMENTS . . . NOW WITH 3 MODELS U.L. LISTED FOR CLASS 1, GROUP D SERVICE!

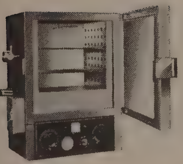
Air turbulence is the only source of heat . . . non-electric POWER-O-MATIC 90™ Control provides superb ±0.5°C. proportional performance. U.L. Listed models have 15°C. above ambient to +150°C. (+302°F.) range — remain well under +215°C. under any operating conditions. Other models built to N.E. Code recommended practices for Class 1, Group D locations . . . others engineered for general-purpose applications of a critical nature. Also Class A and Batch. Various sizes . . . temperatures to +260°C. (+500°F.). You can't buy a safer chamber!



HIGH TEMPERATURE CHAMBERS — OVENS TO +704°C. (+1300°F.); FURNACES TO +1650°C. (+3000°F.)

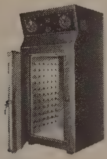
Ultra-Temp Ovens — gravity and mechanical, bench and floor — with ranges to +704°C. (+1300°F.) feature new patented POWER-O-MATIC 80™ Solid-State Proportioning Control for true straight-line performance. Available with a variety of options including programming. Other models with commercial solid-state instrumentation for less critical work.

Complete line of Furnaces includes new models — like Globar® illustrated — with POWER-O-MATIC 80 Control for proportional performance at elevated temperatures. Also Tube, Box Type Muffle and Industrial. All high temperature chambers have built-in overtemperature protection.



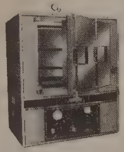
BURN-IN
AND
OVENS
LIFE-TEST

Variety of sizes and types with temperatures to +316°C. (+600°F.). New High-Powered Life-Test Oven is designed for extended tests, yet high K.W. rating and one-pass air-flow system also provides fast run-up and pull-down rates. All models have Blue M's own patented controls for superior performance and overtemperature protection for safety.



BATCH
OVENS

Dozens of models . . . sizes to 96 cu. ft. . . . temperatures to +400°C. (+750°F.). Available with POWER-O-MATIC 60 Control for precise work — or with less sophisticated instrumentation for less demanding performance. Options include programming, roll-in racks, timers, rear doors and many others. Also new Class A ovens meeting recommendations of NFPA Bulletin 86A. Built-in overtemperature protection.



INERT
GAS OVENS

Complete line includes simple units with manual gas control on up to fully automated chambers with programming. Bench and floor models. Temperatures to +593°C. (+1100°F.). All have patented Blue M control systems matched to the capabilities of the chamber for fine performance. Overtemperature protection standard. Properly applied, these units quickly pay for themselves in gas savings alone.

Complete selection ranging from small, inexpensive water baths for laboratory use on up to large, semi-custom units for pinpoint testing of exotic components and parts. Most feature Blue M's patented, fully automatic MAGNI-WHIRL® agitation — the built-in system which obsoletes old-fashioned, space-wasting circulating methods and mechanical stirrers. Blue M control systems — including POWER-O-MATIC 60 — are standard on most models.

FOR FULL DETAILS ON THESE PRODUCTS AND FOR INFORMATION ON OUR COMPLETE CONTROLLED TEMPERATURE CAPABILITY — INCLUDING CUSTOM-ENGINEERING — CONTACT YOUR NEAREST BLUE M BRANCH OFFICE OR WRITE US DIRECT. YOUR INQUIRY WILL RECEIVE OUR PROMPT ATTENTION.

ENVIRONMENTAL TEST EQUIPMENT

VIBRATION TEST SYSTEMS

Unholtz-Dickie produces vibration test systems for all test applications. Sine force ratings range from 50 to 20,000 pounds. The table below lists these systems, with pertinent technical data. Special systems, including those with multiple shakers are also available.

Every Unholtz-Dickie system includes a safe, reliable, proven solid state power amplifier, and features reliable air cooling of the shaker armature. Systems engineering of each system element assures maximum performance and utilization, with simplified operation.

SYSTEM PERFORMANCE				SHAKER

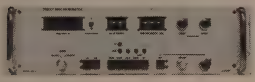
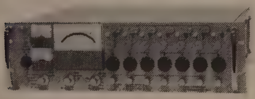
ACCESSORY INSTRUMENTS



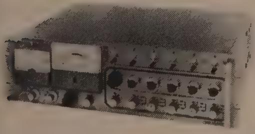
Model OSC-1

Sweep sine generator uses digital circuitry to generate output signal. Features presettable time of sweep, number of sweeps, and digital frequency counter with 0.1 Hz resolution displayed each second.



Model SP-7

Servo-programmer features acceleration, velocity or displacement control in any sequence in up to 7 independent automatic program segments as a function of frequency — log d-c output for record of test.

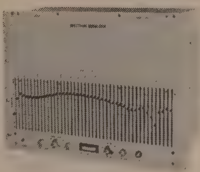


Model ACS-6

Acceleration Control Selector automatically switches to the highest (or lowest) acceleration input. Accepts six sine acceleration signals, and gates to the output whichever signal reaches its preset limit.

Model MAC-8

Multifunction Averaging Control features eight individually selectable data channels for control to the average signal level. Can be used for sine or random vibration testing.



Model E109B

Spectrum Equalizer featuring 45 active filters with individual, rectilinear motion attenuation controls. Convenient equalization can be performed using this unit in conjunction with a real time analyzer.

Accelerometers

A full line of piezoelectric accelerometers for general purpose vibration testing and for special applications. Various models are optimized to provide features such as subminiature size, high sensitivity, high frequency operation, and normalized 10 pC/g sensitivity.

FAN SELECTION GUIDE

BUNKER RAMO AMPHENOL

Step 1 . . . Determine your heat load.

Since almost all of the electrical power input to your system is dissipated as heat, you then have a close approximation to the amount of heat to be removed in watts.

Step 2 . . . Calculate the necessary air flow to remove that heat.

$$CFM = \frac{W}{\Delta T} \times 3.16$$

W-is the heat load in watts that you determined above.

ΔT-is an acceptable difference between average outlet temperature and average intake temperature. A good rule of thumb is 18° F (or 10°).

Step 3 . . . Estimate the resistance to air flow.

This is very difficult to do precisely but a ballpark estimate can be obtained by estimating the static pressure drops through air passages and adding them up. The most restricted area is the most significant.

Static pressure drop (inches of H_2O) $= [\frac{V}{4000}]^2$.

$$V = \frac{CFM}{\text{Area (sq. ft.)}}$$

Step 4 . . . Now that you have a rough idea of the fan performance curve required, you can narrow your choice by considering the following trade-offs:

Trade-Off 1 . . . Life vs. price.

Fan life (which is essentially bearing life) depends greatly on the demands of the application and, in particular, the ambient temperature. The life of sleeve bearing fans which use oil as a lubricant are adversely affected by heat which thins the oil and inhibits its lubricating properties. Sleeve bearing fans should not be used above 55°C; for these applications, ball bearing fans (AMPHENOL SERIES 760) would be needed to give acceptable life. Since ball bearing fans are lubricated with grease, which does not lose its lubricating properties with increases in temperature, the life of ball bearing fans is not dependant on temperature within its specified rating (typically a maximum of 70°C with 100°C capability on special models). In most applications a ball bearing fan will last twice as long as a sleeve bearing fan (typically ten years). If you lease or maintain your equipment then the extra dollars spent would be recovered in lower long run costs.

Trade-Off 2 . . . Air delivery vs. noise

A low noise fan is achieved by reducing rotational speed and hence CFM. What is most often overlooked is that available static pressure is a function of the square of the speed so that when speed is reduced by one half the resulting static pressure is only ¼th of that produced by the full speed fan!

Trade-Off 3 . . . Size

Because of their low cost and excellent cooling performance, the Brute models would be an excellent choice for many applications but they do require more space. However, good fan application practice requires at least a half impeller diameter between fan and components to allow the conversion of air velocity into static pressure. The extra room for the Brute model should then be available. For really tight applications the 760 Series offers models 4-½ inches square and 3-⅝ inches square that are only 1 inch thin.

AXIAL FANS

BUNKER RAMO AMPHENOL

Series 760 Axial Fans

Amphenol now offers an alternative source of supply for cooling fans through its Component Marketing Service subsidiary. This broad line is made by an experienced, innovative manufacturer — and is capable of second sourcing most industry standard models. Thin fans for high density packaging applications and high pressure and flow fans for unusually tough cooling problems are evidenced of technical ingenuity. Amphenol fans are known for high quality construction featuring ball bearings, aluminum frame and lightweight rotors. They offer longer operating life at competitive prices. The efficient aerodynamic design of the impeller assures highest pressure and flow for their size.

Models are illustrated in order of cooling capacity. Those models marked "stock" are available in production quantities from Broadview, Illinois. Limited quantities of other models may be available for evaluation. Detailed catalog describing entire line is available on request.

Series 760 Axial Fan — Model 126

760 126 is interchangeable with other 3⅛ in. size fans. The "knee" of the pressure/flow curve is about 10% better than other fans of this size extending the range of applications for the 126. We'll deliver more air at working pressures above .075 in. of water than any other fan of this size.

CHARACTERISTICS

Electrical connection: 2-12 inch long #22GA stranded wires.

Mounting: Double square flange and mounting holes.

Insulation and finish: See general catalog for specification codes.

Temperature range: Code 11 construction −40°C to +70°C.

Locked rotor protection: Impedance protected.

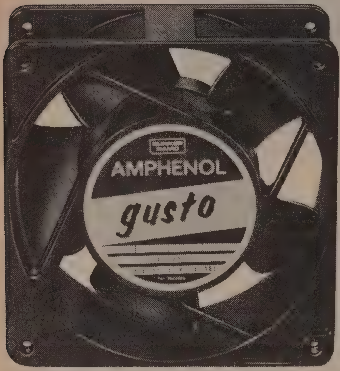
AXIAL FANS

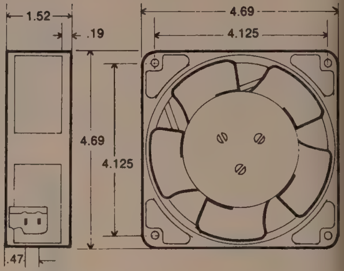
BUNKER RAMO AMPHENOL

Axial Fan Series 390 *gusto*



The Gusto series offers off-the-shelf delivery of the most popular fan size. Gusto fans are interchangeable with all other 4½ inch fans in terms of both performance and dimensions. Quality construction throughout — durable heat sinking metal frame, tough lexan impeller, lightweight non-position sensitive rotor and large sealed oil reservoir sleeve bearing system assure maximum reliability and life for a sleeve bearing design.

Typical life is in excess of five years depending on the application. UL recognized under File No. E53047. Available in low noise, standard and high performance versions. See Pages 000000 for accessories.



CHARACTERISTICS

AXIAL FANS

BUNKER RAMO AMPHENOL

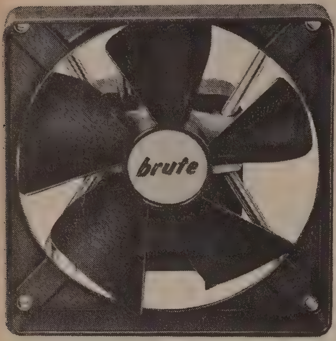
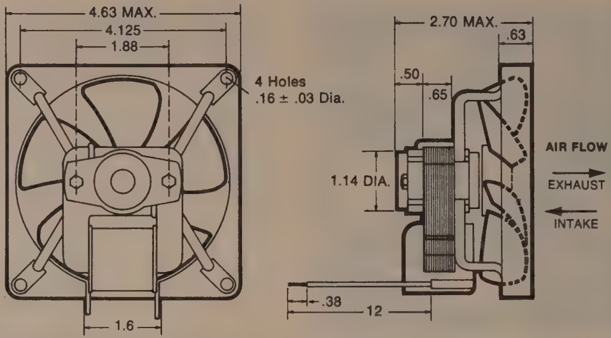
Axial Fan Series 390 DEMI brute





The designers choice where low noise is the prime consideration. The Demi Brute exhaust model delivers 70 cfm at an SIL of only 31 db. The Recirk™ oil circulation system eliminates the bearing wear problems that occur in slow speed concentric motor designs. Convenient 4⅛ inch mounting centers on durable metal frame allows ready substitution for your present fan. UL recognized, CSA listed. Impedance protected during locked rotor condition.

CHARACTERISTICS

Temperature Range
−30°C to 55°C
Materials
Venturi: Die cast zinc alloy painted black
Struts: 3⁄16 diameter aluminum
Impeller and Bobbin: 94V-0 rated plastic
Locked Rotor Protection
Impedance protected
Life Expectancy
Better than 7 years
Winding Insulation Class
B
Electrical Connection
Two 12 inch #18GA tinned stranded wires ⅜ end strip, 105°C PVC insulated

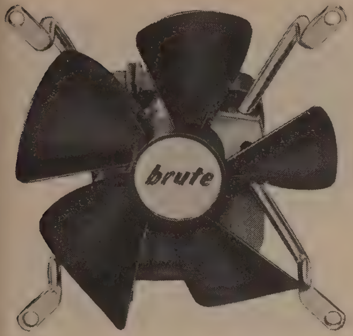
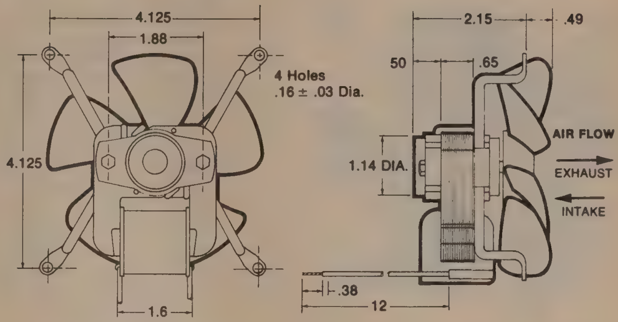
AXIAL FANS

BUNKER RAMO AMPHENOL

Axial Fan Series 390

BARE BONES brute





Allows the designer to save even more money by utilizing the mounting panel as a venturi. When mounted in a 4⅜ inch diameter hole in a ⅛ thick panel, the Bare Bones Brute produces a very respectable performance curve. May also be used to move free air for stirring or spot cooling applications at minimal cost. The Recirk™ positive oil circulation system gives life expectancies of 7 years in typical applications.

Ashland's reputation for consistent excellence is exemplified in this line of stage centrifugal blowers.

These self-contained direct drive blowers are driven by Ashland motors and contain long life, sealed ball bearings designed to withstand vacuum or pressure under the most adverse ambient conditions.

Available in one to six stage configurations with zero C.F.M. at 75 inches static pressure and 60 C.F.M. at zero static pressure.

ASHLAND ELECTRIC PRODUCTS INC.

32-02 QUEENS BLVD., LONG ISLAND CITY, N. Y. 11101 • PHONE (212) 392-4010

AEP MOTORS

model "A" centrifugal blower

**AVAILABLE IN — 115/208 VAC, OR 208-220/440 VAC
60 Hz OR 50/60 Hz, SINGLE PHASE OR THREE PHASE,
SLEEVE OR BALL BEARING, RESILIENT OR RIGID BASE MOTORS.**

All blowers are shipped with 12 O'clock blast which may be changed in the field to any of the 4 positions shown. Special positions can be supplied on order.

ROTATION — Model A blowers are available with either CW or CCW rotation. CCW rotation will always be shipped unless CW rotation is specified. The rotation cannot be changed in the field. Rotation is determined by viewing the blower wheel from the drive side of the housing.

MOTOR — NEMA frame designs manufactured by General Electric* are supplied with the Model A blowers. They are rated at 40°C, open — drip proof with integral resilient mounting.

THERMAL PROTECTION — is not provided due to the nature of the application and a desire for cost reduction. Thermal protectors (Automatic or manual) may be purchased from G.E. distributors and can be easily installed in the field.

LUBRICATION — all angle, sleeve bearing, General Electric motors require a minimum of Service. Lubrication instructions are shown on a terminal box coverplate.

WARRANTY — Ashland's standard one year warranty applies to all materials and workmanship of the blower. The motors are warranteed by G.E. for 13 months from date of manufacture. They can be serviced at any local G.E. service station.

THERMOELECTRIC COOLERS

INTRODUCTION TO THERMOELECTRIC PRODUCTS

Thermoelectric cooling units have many unique advantages over other types of coolers in their application area.

SIZE

They can be tailored to fit the application by easy addition or subtraction of modules to fill the need accurately and avoid waste.

POWER INPUT

Due to tailored modular construction, power requirements can be reduced to a minimum. Power is provided through a single pair of leads.

RELIABILITY

There are no parts that wear or clog, and no delicate moving parts. Gases, corrosive liquids or chemicals that will leak or dissipate with age are also eliminated. These features result in greatly reduced maintenance requirements.

LOGISTICS

There are no requirements at the load for pumping refrigerant or for a source of coolant such as liquid nitrogen to be added during operation of the system.

REMOTE CONTROL

The unit and heat sink are required in the cooling area; the power supply and most other control equipment can be mounted and operated remotely.

COOLING RANGE

Thermoelectric coolers are capable of operating from any heat-sink temperature from +100°C to −100°C.

TEMPERATURE CONTROL

Simple electronic control schemes allow control within a fraction of a degree of desired load temperatures above or below ambient.

HEAT SINKS

The design of the heat sink or heat exchanger is a very important aspect of a good thermoelectric system.

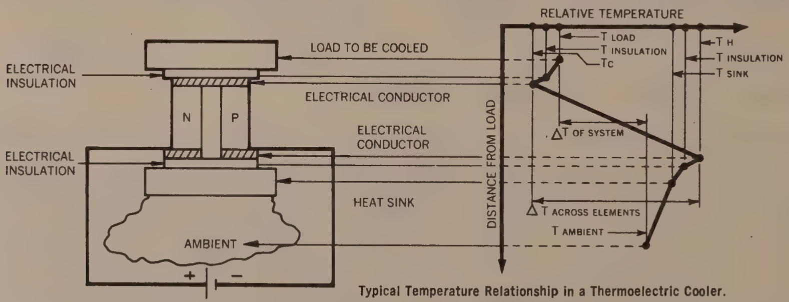
The figure below illustrates the steady-state temperature profile across a typical thermoelectric device from the load side to the ambient.

The total steady-state heat which must be rejected by the heat sink to the ambient may be expressed as follows:

heat rejected (Q_s) = heat absorbed from load (Q_e) +
power input ($V \cdot I$) + heat leakage (Q_1)

If the heat sink is not capable of rejecting the required Q_s from a given system, the temperature of the entire system will rise and the load temperature will increase. If the thermoelectric current is increased to maintain the load temperature, the COP tends to decrease. Thus, a good heat sink contributes to improved COP.

Energy may be transferred to or from the thermoelectric system by three basic modes: conduction, convection, and radiation. The values Q_e and Q_1 may easily be estimated; their total along with the power input gives Q_s, the energy the hot-junction must dissipate.



Typical Temperature Relationship in a Thermoelectric Cooler.

TIME TO COOL OR HEAT VARIOUS MATERIALS

The figure below shows the heat transfer required to cool or heat a given weight of known material in one hour without a change of state. When a change of state occurs (freezing, melting or vaporizing) the additional heating or cooling capacity required can be estimated by multiplying the weight of the given material by the appropriate latent heat. The equation plotted in the Figure at the right is:

$$Q \, \Delta t = m \, Cp \, \Delta T \qquad (2)$$

ΔT — required temperature change (°F)
Cp — average specific heat (BTU/lb-°F)
m — weight of material (lbs)
Δt — time interval
Q — heat removed or supplied (BTU/hr)

Using this formula, it is easy to design a photographic bath for processing film rapidly. The bath consists of 2 lbs of water in a 1 lb stainless steel container. The bath must be cooled from 110°F to 60°F in 1 hour. How much heat must be removed?

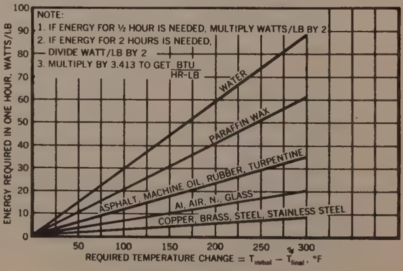
The temperature change is (110-60) = 50°F.

Enter Figure below on the horizontal axis at 50°F. Move vertically to the stainless steel and water curves and read on the vertical axis:

15 watts/lb × 2 lbs of water = 30 watts
1.6 watts/lb × 1 lb of stainless = 1.6 watts

Thus, for 1 hr, 31.6 watts are required.

The time provided by this graph is based on a constant heat transfer during the one hour period. Actually, a thermoelectric cooler would not pump heat at a constant level due to change in ΔT and this should be taken into account in a design. An effective heat pumping capacity of a thermoelectric cooler can be estimated as the heat pumping capacity at a temperature difference equal to one-half of the final operating ΔT (usually, initial ΔT = 0). Borg-Warner can provide assistance in more accurate transient design.



Energy to be Added or Removed Thermoelectrically in One Hour for Various Materials.

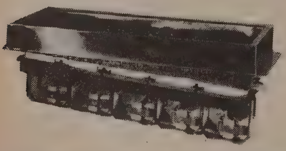
Ring type cooler to stabilize the inertial navigation system at 40°C and pump 280 watts with an input power of 338 watts.



This system cools one gallon of chemical solution to 40°F below ambient with 850 watts of input power. Load capability 450 watts at 0 ΔT.

TEMPERATURE CONTROLLERS FOR POWER SUPPLIES

TC-101	Set Point Relay Controlled Accuracy ±3°C	Heat and Cool
TC-102	Set Point Proportional Accuracy ±1°C	Cool only
TC-104	Set Point Proportional Accuracy ±1°C	Heat and Cool

Other Borg-Warner Thermoelectric Heat Pumps are available that will operate with larger or smaller heat pumping capacities and current input voltage. Power supplies, on/off temperature controllers with set point, and proportional reverse controllers are available to fit these pumps. Please contact factory for further information.

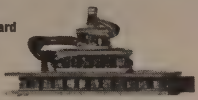
CASCADED THERMOELECTRIC COOLERS

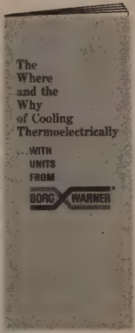
Model Number 954-70-16-4-1 Standard Four Stage Cascade



Special 145°K Eight Stage High Performance Cascade

Model Number 134BW-63-31-15-7 Low Power 193°K Cascaded Cooler

Model Number 936BW-65-32-17-8-4-2 Low Power 170°K Cascaded Cooler



The Where and the Why of Cooling Thermoelectrically

...WITH UNITS FROM BORG WARNER

Write on company letterhead for your free copy

The principles, applications, and design possibilities of thermoelectric cooling are discussed in this booklet.

STANDARD

2 - 5 Stages
From T_H 27°C
To T_C 180°K

Over 7000 Optimized Cascade Designs Using Partial Standard Borg-Warner Thermoelectric Modules.

- — Customer Design at Standard Cooler Prices
- — Lowest Price Per Watt of Heat Pumped
- — Quick Delivery, Usually one Week ARO

HIGH PERFORMANCE

2 - 14 Stages
From T_H 27°C
To T_C 130°K

Individual Computer Aided Cascade Design Using Standard or High Performance Thermoelectronic Materials.

- — Higest Heat Pumping Capability
- — Lowest Temperatures
- — Lowest Power Input

STANDARD LOW POWER INFRARED DETECTOR COOLERS

Base Size	0.46″ x 0.76″	0.94″ x 1.03″
Height	0.63″	1.27″

DELIVERY FROM STOCK

Cascaded Thermoelectric Coolers are available at premium prices that will withstand ambients or bake-out temperatures of 150°C.

CUSTOM DESIGN

Engineering back-up is available for designs to meet customer specifications.

APPLICATION OF THERMOELECTRIC PRODUCTS

Cold traps for vacuum chambers
Crystals
Discrete silicon components
Inertial guidance systems
Infrared detectors
Integrated circuits
Lasers
Masers
Nuclear radiation detectors
Parametric amplifiers
Constant temperature chambers
Environment chambers
Integrated circuit test chambers
Temperature baths
Display cabinets
Ice cube makers
Photo developing solution coolers

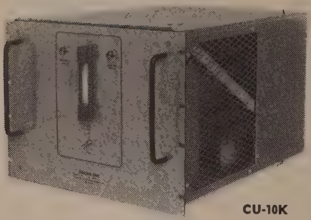
COOLING UNITS

HEAT EXCHANGE-REFRIGERATING

Electro
IMPULSE, INC.



CU-10K

Heat exchange cooling units are useful whenever it is desirable to prevent runaway heat conditions. Heat is absorbed by a circulating coolant liquid, then exhausted into the ambient by forced air passing through a radiator.

Use this series when coolant temperature can be allowed to rise above ambient.

CU SERIES

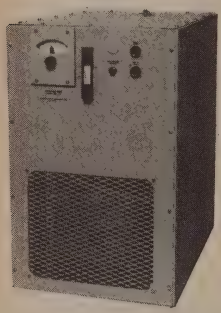
WATER-TO-WATER UNITS ARE NOW AVAILABLE

Model	Cap Watts (BTU/Hr)	(1) Temp. Rise (Water)	Cool-ant Flow	Max. Press.	Std. Op Volt	Size LxWxH	Wt.
CU-500	500 (1700 BTU)	10/500 w	.5	30	115-1-60	10x14x20	60
CU-5000	5000 (17,000 BTU)	5/KW	1	50	115-1-60	23x17 7/16 x14	75
CU-10,000	10,000 (34100)	4/KW	2	50	115-1-60	22x17½ x18	95
CU-20K	20,000 (68,000 BTU)	1.25/KW	5	60	208/230 1-60	33½x21½ x30	175
CU-50K	50,000 (170,000 BTU)	0.5/KW	12	60	208/230-3-60	40x40x40	250
CU-100K	100,000 (341,000 BTU)	0.3/KW	20	60	208/230-3-60	64x96x68	400

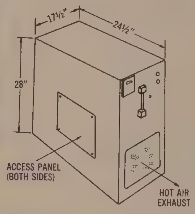
(1) Measured coolant rise above ambient per °F per unit watts indicated at rated flow using water.

Optional Equipment Available: Flow switch, Thermometers, Thermostat, Flowmeter, Heater and Water De-ionizer.

RU SERIES



RU-75



Models from this series are required when coolant temperatures must be below ambient. Using refrigeration, they can provide temperatures to 0 degrees C and below, while removing up to 9000 watts of heat.

These units are ideal for remote applications. Coolant temperatures are low, flow rate is steady, and the final heat sink can be in a location which will not cause overloading of air-conditioning equipment.

Special options can provide temperature control of ±0.15 degree F, while combinations of refrigeration and heating can hold temperatures at any point above ambient.

Model	Amb. 70°F Capacity Watts Water @ 65°F	Amb. 90°F Capacity Watts Water @ 65°F	(1) Cool-ant Flow	Max. Press.	Std. Op Voltage	Size LxWxH	Wt.
RU-6	370	325	.5	30	115-1-60	24½x14x11	90
RU-12.5	900	780	.5	35	115-1-60	34x18x14	150
RU-25	1180	1050	1	50	115-1-60	23x13½x22	200
RU-50	1780	1560	1	50	115-1-60	17x17x15½	220
RU-75	2600	2300	1	50	115-1-60	24⅝x17¾x 28¼	230
RU-100	3350	2900	3	60	208/220-1-60	24⅝x17¾x 28¼	230
RU-200	4630	4130	3	60	208/220-1-60	26⅛x18¾x 36¾	240
RU-300	7100	6100	4	60	208/230-3-60	32x18x36	300
RU-400	11,000	9000	5	60	208/230-3-60	32½x18x36⅜	390

(1) Recommended min. flows — other flow rates available.

Optional Equipment Available: Thermometer, Thermostat, Flow Meter, Heater.

RACK COOLER

This series is designed for air, rather than liquid cooling. A sealed volume of air is cooled by a refrigeration system and continually re-circulated within the enclosure. Cool sensitive rack-mounted electronic equipment, or use duct work and manifolds for extensive cooling of radar or other electronic control consoles and cabinets.

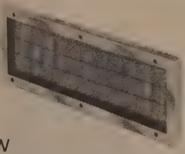
EVANS air filters

for Electronic Cabinet Application

. . . used on Computers . . . Card Readers . . . Tape Transports . . . Transceivers . . . Power Supply Units . . . both large and small cabinetry. Evans Air filters are permanent. Rigid. Aluminum. Made to withstand the brutal abuse of military field conditions. Frames have mitered corners for smooth, close tolerance fit. Die cut, expanded aluminum grids are criss crossed and precision fitted into each filter. Patented Brillo Lock design gives more air delivery with positive cleaning results.

Tolerance:	± 1/32″
Velocity:	200 to 900 FPM
Efficiency:	75% AFI Test
Finishes:	Available in chemical film finish to meet requirements of MIL-C-5541 . . . MIL-F-14072 . . . MIL-A-8625
Sizes:	Filter of 1/2″ or 3/4″ dimension. Made to a maximum area 400 sq. inches . . . with maximum length 25″ on one side without special bracing. For complete information write or call.

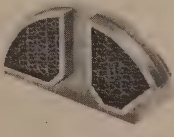


LOW
RESISTANCE FILTER

Special serts permit fastening solidly to blower unit. Made for air drop equipment.

LOUVERED FILTERS

For outside application. Louvers protect filter media from water, ice, snow.



HEAVY DUTY UNIT

For rugged military use. Extra rigid frame made from .063 aluminum.

to meet your most demanding cooling requirements. Slim-profile IMCool tubeaxials, compact (4-11/16″ to a side) Boxers and MiniBoxers in Mil-Spec, 400 Hz and variable frequency versions, propeller fans and centrifugal blowers for intake or exhaust, against back pressure, and in harsh environments. Also, high performance vaneaxials from miniature IMCube (1″ cube) to 14.5-inch diameter sizes, automatic air density/speed compensating "Hi-Slip" models for high altitude applications. Air deliveries from 6.5 to 3500 cfm.

Select from the thousand or more catalog designs, a sampling of which appear below, or we will custom design to your exact specifications . . . new systems, evolving systems, exasperating parameters, it's all in a days work for our Applications Engineering Section.

IMC MAGNETICS CORP.
EASTERN DIVISION
570 MAIN STREET, WESTBURY, NEW YORK 11590

IMC FAN FACTS

Our well-built airmovers are rugged and reliable

Standard **Boxer** fans, rugged ball and new **Grand Prix** sleeve bearing types, both rated at more than 10 years operating life. **Super Boxer** for exceptional output at high back pressure. Versatile **DC Boxer** accepts DC and converts it to drive the unit's AC motor, eliminates brush wear, RF noise and other common DC motor problems. Miniature **PeWee Boxer**, delivering the highest cooling punch of any fan its size.

These reliable performers feature Boxer's sturdy all-metal construction, compact design for ease and flexibility of installation, and patented long-life bearing systems, as do **MiniBoxers, Tandem Boxers, Hi-Fi Boxers** and the new **Fulmar** fans. There's also the slim-profile **Condor** (3½″ thin by 10″ dia.) with air delivery to 575 cfm, and quality proven **IMCair** fans and centrifugal blowers. They are all distributor stocked for immediate availability.

If you'd like complete specifications and performance parameters for our full line of airmovers, send for 20 page catalog No. ND4R-5. It's available from **IMC Magnetics Corp., New Hampshire Division. Tel. (603) 332-5300.**

IMC FAN FACTS

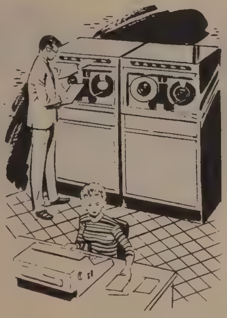
ALL 50/60 HZ AIRMOVERS

Here's a fan with high performance for low-profile cooling

The IMC Pe Wee Boxer fan delivers the highest available air flow for any unit of its size — up to 36 cubic feet of air per minute. The answer for cooling radio transmitters, tape decks, power suppliers, 3″ high relay rack panels etc. Well built for long life — varied designs.

3⅛″ square by 1.665″ deep.

PE WEE BOXER FAN



Our standard Boxer Fan is rugged and reliable

Here's a compact* whose whirlwind delivers 70 to 115 cubic feet of air per minute. The Boxer can convert to a variety of uses — has long life and saves time and money.

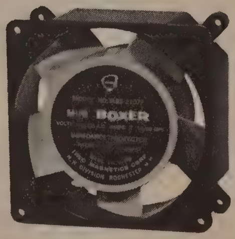
BOXER FAN
IMPEDANCE PROTECTED

* 4¹¹⁄₁₆″ square by 1½″ deep.

STANDARD BOXER FAN

IMC's MINI has a MAXI

When it comes to applications, our Mini Boxer fan can meet a maximum of uses — ranging from the busy ring of the supermarket cash register to the soothing melodies of a modern tape deck. Variations of this model include the Ball Bearing, G.P. Sleeve Bearing, Skeleton and Mil Type Miniboxers — all with similar low profile applications.



3⅝″ Sq. by 1½″ deep

The Originators and Leaders in Packaged Cooling Equipment

RACK–MOUNTED BLOWERS

Over 100 models available in any panel width. Heights from 3½" to 12¼". Airflows to 1000 CFM. Pressurize systems with cool, filtered air. Prevent dust from entering systems. Standard EIA notching. Quick, easy mounting. No cutting. No filing. Also Packaged Fans for pressurizing or evacuating. Four sizes. Airflows from 275 to 120 CFM. All units available to Commercial, Military or EMI Shielded Specifications.

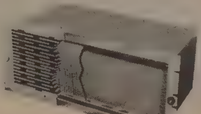
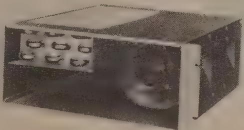
*ALL MODELS ARE 19" WIDTH EXCEPT ID300A (HALF PANEL) **ALL MOTORS ARE 115V 50 60 NZ UL APPROVED
UNITS ALSO AVAILABLE TO OTHER RACK WIDTHS AND FOR RECESSED INSTALLATION



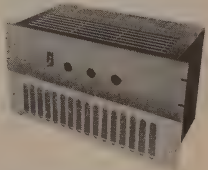
EMI—SHIELDED UNITS

All packaged blowers available with an EMI shield and wave guide media built into the airstream. Cuts signal leakage inward or outward.



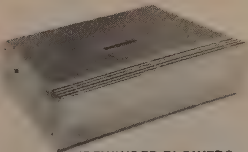
HEAT EXCHANGERS

Maintain cabinet temperature at 80°F maximum with 1 KW heat dissipation. Air recirculates in rack and is cooled by exchanger in blower case.



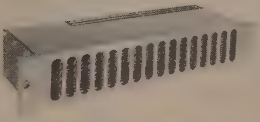
HEATER—COOLERS

For unheated field installations. Maintains an even 65°F with surrounding air as low as 10°F.



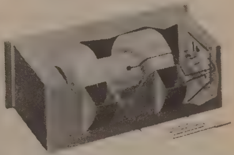
SIDEWINDER BLOWERS

More air. More pressure. Less space. Delivers 180, 350 or 515 CFM in a 17" wide airstream.



SLOT BLOWERS

Ideal for jam-packed circuitry. Delivers 150 CFM from a 3½" panel. Quiet.



SOLID STATE TEMPERATURE CONTROLLERS

Cuts noise level. Modulates blower speed. Keeps operating between 80-90°F. Costs less than air conditioning.

Also a broad line of accessory equipment including grilles, controls, etc.

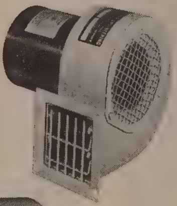
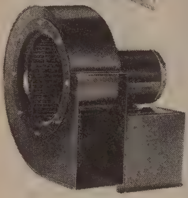
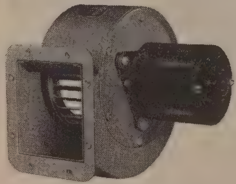
mc lean®

Single and Dual Centrifugal Blowers
Filter Grille Panels





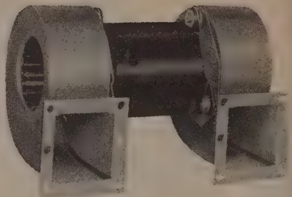


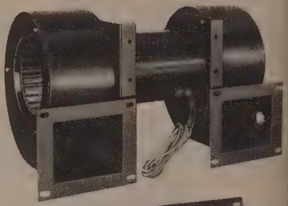
SINGLE CENTRIFUGAL BLOWERS—McLean does have a large selection of single centrifugal blowers engineered to meet a wide variety of CFM output and pressure characteristics. Inlet duct flanges, exhaust outlet flanges and protective screens are available. CW and CCW rotations can be supplied. Each motor has been specifically designed for the application, bearings are properly loaded, double shielded and permanently lubricated. Motor and wheels are balanced to precision tolerances assuring vibration-free operation. All motors are UL approved. These blowers may be operated in any shaft position.

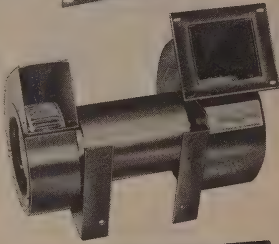
CFM output ranges from 50 to 2000 CFM with static pressures from 0″ to 3.0″ SP. Motors can be supplied for any AC frequency or power.

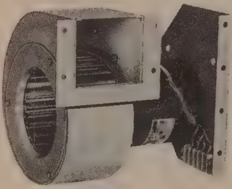
DUAL CENTRIFUGAL BLOWERS—There is an extensive variety of McLean Dual Centrifugal Blowers offering a wide choice of static pressure and output characteristics. Wheel diameters range from 3″ to 12″. Motors can be supplied for any AC frequency or power, single or three phase. Each motor has been specifically designed for the application, bearings are properly loaded, double shielded and permanently lubricated. Motors and wheels are balanced to precision tolerances assuring vibration-free operation. All motors are UL approved.

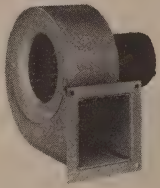
Exhaust outlet flanges, inlet duct flanges, protective screens and various types of mounting flanges and supports are available.

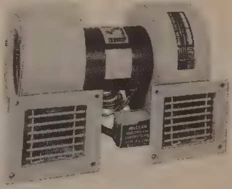


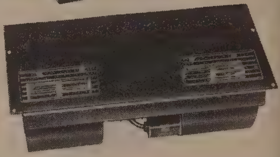




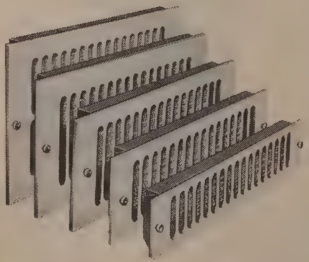








FILTER GRILLE PANELS



Filter Grille Panels are for use in electronic cabinets where louvered area is needed to permit adequate ventilation. These panels may be used as an air inlet or air outlet. They are available with two different grille designs as shown herewith and are complete with dust filters. Can be supplied in standard EAI cabinet heights from 3½″ x 10½″ and widths 9½″, 19″. 24″ and 30″.

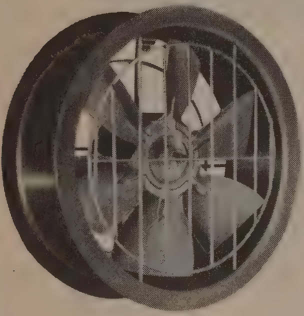
FANS — Venturi, Orifice, Panel-Mounted

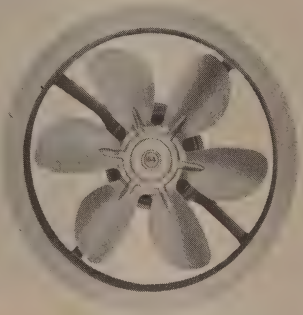
VENTURI-MOUNTED



MODEL 1VB80

A 420 cfm self-contained unit that mounts against top, bottom, or side of rack. Mounts for airflow in either direction . . . no need to stock two models for push or pull. Venturi is black anodized aluminum 3⅞″ deep. Motor: 1600 rpm; 60 watt, 115 volt, 50/60 Hz; shaded pole; stainless steel shaft; double-shielded ball bearings; permanently lubricated; fungus, moisture, and corrosion resistant. Installs fast and easy — just bolt flush to rack opening and fan is ready to go.

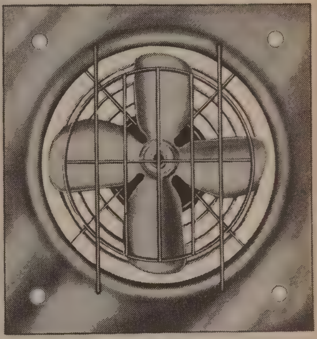
ORIFICE-MOUNTED



SERIES 1NB65

Rugged, self-contained. Strong, lightweight, axial flow aluminum for maximum pressure. Mounts easily on top, bottom or side of rack. Deep-pitched, accurately-balanced blades are quiet and vibrationless. No welds, joints, or rivets to break. Motors: 115 volts, 50/60 Hz; shaded pole, stainless steel shaft. The INB65 Series is 3000 rpm, 60 watts, airflow either direction. The 1NB80 Series is 1600 rpm, 55 watts air flow either direction. cfm's are 275, 300 or 395. Dimensions: 4″ deep x 8½″ dia. or 4¾″ deep x 10¼″ dia.

PANEL-MOUNTED



SERIES 1PB65

Low-cost, long-life, self-contained fans ready to mount, shaft in any position, for vertical or horizontal operation, inside or outside rack. May be installed flat against mounting surface in a round or square opening with a minimum of installation time and effort. Propeller protected with heavy wire guard welded flush in bell mouth orifice plate. Motor side also protected by heavy cadmium-plated guard. Air delivery 280 cfm. Motor: 3100 rpm, 70 watt, 115 volt, 50/60 Hz, permanent lube. Dimensions: 10″ square panel on 9″ centers, $4\frac{23}{32}$″ deep.

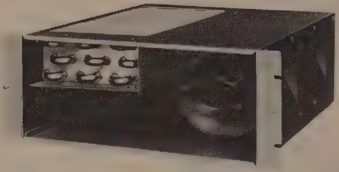
Heat Exchangers • Heat Pipes

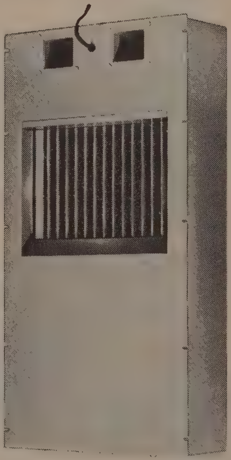
HEAT EXCHANGERS

McLean Heat Exchanger models are designed to meet individual specifications and applications. Air is recirculated within the electronic enclosure and cooled by a heat exchanger installed within the blower case. The systems do not use room ambient air nor do they exhaust hot interior cabinet air into the room atmosphere. These heat exchangers are highly reliable with a more accurate interior cabinet temperature control. Especially recommended in critical applications involving a harsh environment surrounding the electronic installation.



HEAT PIPE HEAT EXCHANGERS

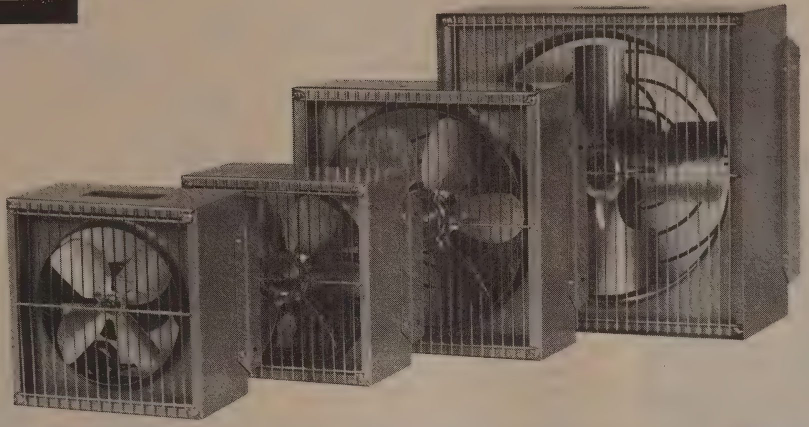
Model HPI is an air-to-air system utilizing the most advanced method of heat transfer now in use. The heat pipe is a super thermal conductor, transmitting heat by the evaporation and condensation of a working fluid sealed in the pipe. Ambient air is cooled and recirculated without introducing outside air. Ambient air is used only to cool the heat pipe and is not induced into the cabinet. Model shown will remove 1 KW of heat and will maintain a stable interior temperature differential of 16°F above ambient.



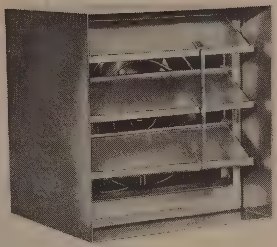
McLEAN ENGINEERING LABORATORIES

P.O. Box 127B, Princeton Junction, New Jersey 08550 • Phone (609) 799-0100 • TELEX 84-3422

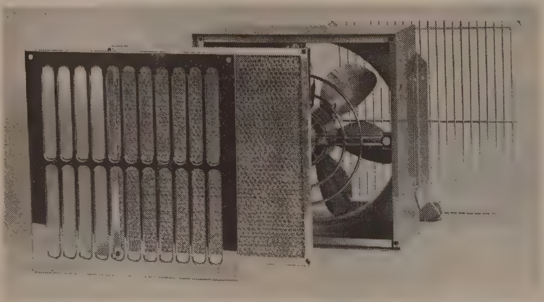
Reversible Filter Box Propeller Fans



MODEL 1RB65 MODEL 1RB80 MODEL 1RB100 MODEL 1RB120



MODEL LA120



Extra Equipment: Stainless Steel Grille, Permanent Washable Filter, Heavy Gauge Propeller Guard.

Efficient, versatile, and compact line of mechanically-reversible fans with a wide range of CFM capacities and flexibility of mounting arrangements. May be used to pressurize or evacuate electronic cabinets. Can be supplied with guards, dust filters and decorative air inlet grilles. All UL approved.

Model 1RB65 delivers 275 cfm, 3100 rpm 4½" deep x 8⅞" square

Model 1RB80 delivers 450 cfm, 1650 rpm 4½" deep x 8⅞" square

Model 1RB100 delivers 725 cfm, 1600 rpm 4½" deep x 12⅛" square

Model 1RB120 delivers 1200 cfm, 1450 rpm 4½" deep x 15⅛" square

Model LA120 Back Draft Damper is used in conjunction with Model 1RB120. Louvers automatically open when power is applied and close when power is off. May be used in horizontal or vertical positions.

Premium Grade Fans

PAMOTOR offers a premium grade fan line for the most critical of applications. Guaranteed to be the most reliable fans available, the PENTAFLOW ™ series is covered by a special 5-year warranty.

Every model in the PENTAFLOW ™ series incorporates seven basic points of superiority designed into them: lightweight, durable all-metal construction . . . low noise level . . . low operating temperature . . . optimized shape factor . . . minimum electromagnetic field . . . low true cost . . . and high reliability.

FEATURES
- 5-Year warranty
- All-metal construction
- UL recognized - Yellow Card E41168
- Special moisture resistant finish

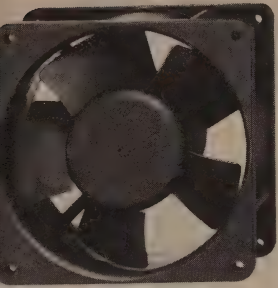
(415) 347-1203 • TWX 910-374-2353 • TELEX 34-9373

FEATURES
- Out-performs equivalent sized AC fans
- Polarity protected
- No external inverter required
- Fully self-contained
- Reliable all-metal construction
- Input power - 20% of that required in AC units

PAMOTOR has introduced the first self-contained DC cooling fan that does not require an external voltage inverter. This new design concept eliminates many of the inherent reliability and RF noise problems associated with using AC motors in a DC environment.

The new PAMOTOR DC fans are available in three configurations: two axial fans and one radial blower. All of the units are designed to meet U/L, C.S.A. and I.E.C. requirements.

MODEL 4110
Size: 4.68" Square x 1.50" Depth
122 CFM



U.S. Patent No. 3-873-897

Characteristic	Model 4110	
	24 VDC	28 VDC
Bearing System	Ball Bearing	Ball Bearing
Voltage	19 - 28 VDC	19 - 28 VDC
Input Power	4.1 watts	5.9 watts
Input Current	170 mA	210 mA
Air Flow	82 cfm	122 cfm
Speed	2225 rpm	3175 rpm
Weight	21 ounces	21 ounces
Noise Level (SIL)	28 dB	35.6 dB

What follows will give you an idea of what we can offer you in standard centrifugal, axial, tube axial, and transverse blowers.

Torin

Torin Corporation
United States: Torrington, Conn.
Van Nuys, Calif.
Rochester, Ind./Elgin, Ill.
Canada: Oakville, Ont.
England: Swindon, Wilts
Belgium: Nivelles
Australia: Sydney
Spain: Alcalá de Henares

The models on the following pages sum up our selection of ready-to-go standard blowers. They're the substance behind our statement that we have an unmatched choice . . . in size and variety.

We also have extensive production facilities that are strategically situated from the East to the West Coast in North America, as well as throughout Western Europe and Australia. Our inventory is a good guarantee that you won't grow old waiting for deliveries.

After all, we've been in this air-moving business for fifty-odd years. So we know what service is all about. Many of the products presented here are available directly from our nationwide stocking distributors.

The best way for us to get started together is for you to ask for literature that contains complete specs and data on our complete standard blower line. Write or phone Torin Corporation, Torrington, Ct. 06790 . . . 203-482-4422. Make your choices, and we'll zap off literature or samples to you immediately.

See how easy we make it to solve air-moving problems?

Standard Axials

Torin

Torin Corporation
United States: Torrington, Conn.
Van Nuys, Calif.
Rochester, Ind./Elgin, Ill.
Canada: Oakville, Ont.
England: Swindon, Wilts
Belgium: Nivelles
Australia: Sydney
Spain: Alcalá de Henares

Torin Standard Axials offer a wide range of air and pressure delivery. They provide a low-cost answer for many cooling applications. The impeller design is the result of a great many years of application and design experience. It is a one-piece construction that exhibits a high degree of aerodynamic design in its blade configuration.

The motors are manufactured by Torin's wholly owned subsidiary Cole Dynamics.

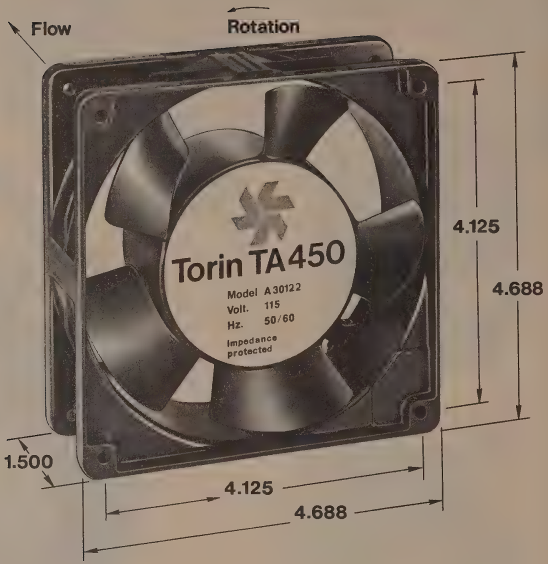
Standard TA450 Tube Axial

Torin

Torin Corporation
United States: Torrington, Conn.
Van Nuys, Calif.
Rochester, Ind./Elgin, Ill.
Canada: Oakville, Ont.
England: Swindon, Wilts
Belgium: Nivelles
Australia: Sydney
Spain: Alcalá de Henares

The TA450 is a small tube-axial blower with an integral motor. It was designed to reflect improvements over competitive units and the needs of customers as revealed by our market survey. The TA450 is utilized primarily in computers, business machines and electronic equipment. Its size and characteristics also make it applicable to many other uses.



Elements

Housing: One-piece zinc die casting which provides strength and acts as a heat sink in dissipating heat from the motor. Finish is plain or black paint.

Motor: Shaded pole designed as an integral part of the unit. Motors are impedance protected.

Bearing system: The unit is available with either sleeve or ball bearings.

Sleeve Bearings: A sintered bronze bearing impregnated with high-quality oil (23% volume). Hydrodynamic pumping and pressure at the front end of an air-tight system causes oil to move along the shaft to provide a constant film of lubricant.

Ball Bearings: Double-shielded ABEC-3 electric motor quality bearings, press fitted into the rotor laminations.

Life expectancy: Because of the lubricant reserve and low loss design, you can expect long bearing life. Actual life in any given case will depend upon operating conditions, including temperature, duty cycle, vibration and contamination levels. A normal expectancy for nominal indoor ambient conditions would be 20,000 hours life.

UL and CSA approval on units.

Models

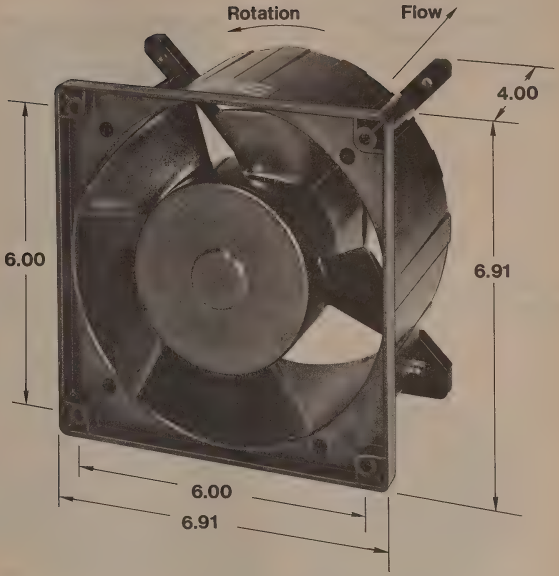
Model No.	Voltage	Frequency	Phase	Bearing Type	Performance CFM at zero static pressure
A30108	115	50/60	1	Sleeve	106
A28678	230	50/60	1	Sleeve	106
A30122	115	50/60	1	Ball	106
A30135	230	50/60	1	Ball	106

Standard TA700 Tube Axial

Torin

Torin Corporation
United States: Torrington, Conn.
Van Nuys, Calif.
Rochester, Ind./Elgin, Ill.
Canada: Oakville, Ont.
England: Swindon, Wilts
Belgium: Nivelles
Australia: Sydney
Spain: Alcalá de Henares

The TA700 is a tube-axial unit developed to produce greater air delivery than any other blower of its size and type. It was designed specifically for applications that demand a large volume of air working against moderate static pressure, such as densely-packaged relay racks in communications equipment and printed-circuit card chassis in computers. The TA700's construction is rugged, yet not heavy. It outperforms competitive units in air flow, power consumption and quietness of operation.



Elements

Impeller: Lexan polycarbonate black plastic injection molded. Airfoil shape for optimum air performance with low noise.

Note: Lexan polycarbonate has U.L. rating 94V-O for flammability. It has high-impact strength, dimensional stability, heat resistance, and excellent environmental resistance to maintain these properties over a long life.

Housing: Lexan polycarbonate black plastic injection molded. Housing ribbed for additional strength and rigidity.

Motor mounting: Aluminum die cast with four radial motor support struts, semi-elliptically shaped to lessen noise. The entire bracket operates as a heat sink to hold temperature rise to a minimum. Air ventilating holes are also provided.

Motor: Shaded pole, thermally protected, developed to use less current and lower draw than any other blower motor of similar size and performance.

Two double shielded ball bearings.

Life expectancy: Because of the lubricant reserve and low loss design, you can expect long bearing life. Actual life an any given case will depend upon operating conditions, including temperature, duty cycle, vibration and contamination levels. A normal expectancy for nominal indoor ambient conditions would be 20,000 hours life.

UL and CSA approval on units.

TA450 & TA700 Accessories

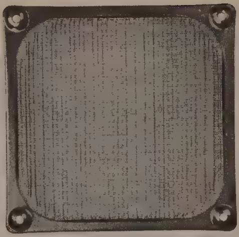
Products designed for use on Torin tube axial units.

Torin

Torin Corporation
United States: Torrington, Conn.
Van Nuys, Calif.
Rochester, Ind./Elgin, Ill.
Canada: Oakville, Ont.
England: Swindon, Wilts
Belgium: Nivelles
Australia: Sydney
Spain: Alcalá de Henares

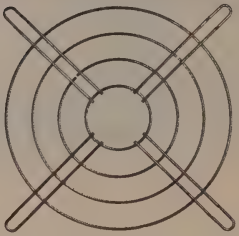
Filter: for use with TA450 tube axial unit. Designed to attach directly to the TA450 unit. Matched filter and fan insure proper operation and easy assembly.

Part number 30208

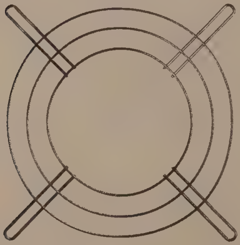


Guards protect personnel or object from coming in contact with rotary fan.

Part number 30181 for TA450



Part number 30204 for TA700



Cord assembly for use on both TA450 and TA700

Part number 30225

Standard Transverse Flow

Torin

Torin Corporation
United States: Torrington, Conn.
Van Nuys, Calif.
Rochester, Ind./Elgin, Ill.
Canada: Oakville, Ont.
England: Swindon, Wilts
Belgium: Nivelles
Australia: Sydney
Spain: Alcalá de Henares

Because of their configuration, Transverse Flow Blowers occupy minimum height and depth. Utilizing the entire width of the impeller blades, they take air in across the entire width of impeller and discharge it at that width. They deliver a wide band of uniformly distributed air at a plane defined by the discharge of the specially-designed housing.

There is a definite price advantage in the utilization of this new line of nine standard models, but the economy involves no sacrifice of quality.

Standard Centrifugals

Torin

Torin Corporation
United States: Torrington, Conn.
Van Nuys, Calif.
Rochester, Ind./Elgin, Ill.
Canada: Oakville, Ont.
England: Swindon, Wilts
Belgium: Nivelles
Australia: Sydney
Spain: Alcalá de Henares

Torin Standard Centrifugals feature the most widely used air impeller in air moving history. The continuous blade strip Airotor wheel. This wheel, developed by Torin engineers over twenty five years ago, and improved by usage gained from experience is the standard of the industry. Strong, efficient, rattle free; a forward curved wheel produced to close tolerances of trueness and balance that guarantees you years of trouble free air delivery.

Rotron® Fans and Blowers

Long recognized as the leader in the design and manufacture of air moving devices for cooling and flushing electronic equipment, Rotron offers fans and blowers for virtually every need. Quality standards are the highest in the industry. And costs to the customer are among the lowest. If you do not find the product you need in the following pages, or need help in selecting an air mover to meet your requirements, contact your Rotron representative, distributor, or field office today.

Why settle for less when the best costs no more?

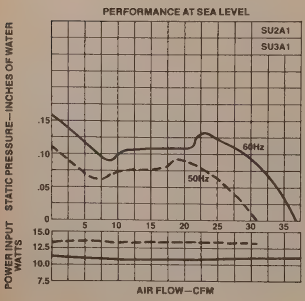
Sprite® Fan

A smaller size fan that delivers relatively high pressures at close-to-maximum air delivery.

- 36 cfm free air delivery, with 25 cfm at .12 inches H_2O
- ideal where space is at a premium, just 3.13″ square x 1.64″ depth
- withstands ambients from -28°C to 60°C
- outperforms larger, conventional fans in many applications
- extremely quiet, with only 35 dB noise level
- UL Yellow Card Recognized
- up to 5 years maintenance-free life
- comes with terminals (standard) or lead wires



Model No.	Part No.	Volts	Hz	Watts	CFM
SU2A1*	028064	115	50/60	10	37
SU3A1*	028067	230	50/60	10	37

*with leads

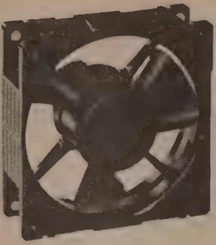
Rotron® Fans and Blowers

ROTRON INCORPORATED



Whisper® Fan

The quiet one - for efficient cooling where low acoustical disturbance is a must.

- just 18 dB at full 52 cfm free air delivery
- available in skeleton or venturi version
- ideal for cooling TV cameras, public address and sound systems, tape recorders, hi-fi equipment, TV receivers, and ham radio gear
- essentially a low-speed Muffin, with all its long life advantages
- 4.68" square x 1.50" depth. Weighs 17.2 oz.
- UL Yellow Card Recognized

Model No.	Part No.	Volts	Hz	Watts	CFM

Muffin® Fan

***The* dependable, low cost fan for all commercial cooling applications.**

- 105 cfm free air delivery
- 10 years continuous duty at 70°F. without relubrication
- only 4.68" square x 1.50" depth
- proved by the millions in thousands of applications
- rated for ambients from −18°C to 70°C
- venturi or skeleton version
- low 40 dB noise level
- available with ball bearings
- UL Yellow Card Recognized
- weighs just 17.2 oz.

ROTRON INCORPORATED

Rotron® Fans and Blowers

Sentinel® Fan

An especially rugged fan for severe application conditions, including temperature and shock.

- 105 cfm free air delivery
- stainless steel ball bearings
- withstands ambients up to 100°C
- meets MIL E-4970A
- sturdy glass-filled phenolic venturi block
- low NC-40 noise level
- 4.68″ square x 1.50″ depth
- weighs 16 oz.
- venturi or skeleton version
- UL Yellow Card Recognized

Caravel® Fan

Maximum air volume, from a narrow fan, for flushing large racks and cabinets.

- full 590 cfm free air delivery
- measures just 10″ diameter x 3.50″ depth
- sealed ball bearings for long, quiet, maintenance-free life
- for ambients from −30°C to 60°C
- acoustical rating as low as NC-45
- weight 4.4 lbs.
- UL Yellow Card Recognized and C S A listed

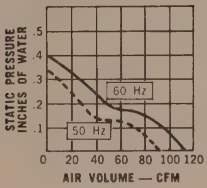
Centaur® Fan

The highest performance in air and pressure delivery for a fan of its size.

- 115 cfm at free air delivery
- withstands ambients from −40°C to 70°C
- 5+ years continuous duty at 21°C
- UL Yellow Card Recognized
- Low NC-47 noise level
- 4.68 x 1.50″ depth allows interchange with Muffin, Sentinel, or Whisper
- weighs 19 oz.



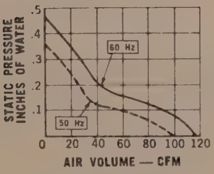
Model No.	Part No.	Bearings	Volts	Hz	Watts	CFM
CR2A1	028076	sleeve	115	50/60	16	115
CR52A1	028082	sleeve	230	50/60	16	115

For complete information, see Catalog Sheet COM 070

Spartan Fan

The MIL SPEC version of the famous MUFFIN.

- 115 cfm free air delivery (132 cfm for 400 Hz model)
- unusually high pressure characteristics (up to .5″ hg)
- dimensionally interchangeable with Muffin® fan 4.68″ square x 1.50″ depth
- double shielded stainless steel ball bearings
- lubricated for life
- highly efficient multi-slot motor
- withstands ambients from −54°C to 125°C
- venturi, spiders, and hub are single aluminum casting for shock and vibration resistance
- meets all applicable mil specs for ground and shipboard use



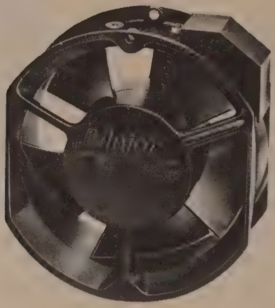
Motor Series	Volts	Hz	Watts	CFM
682YS	115	50/60	13	117
810DS	115	400	13	135

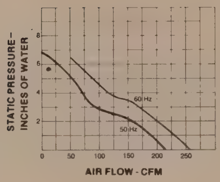
Type SL with leads, Type ST with terminals

For complete information, see Catalog Sheet MIL 070

ROTRON INCORPORATED

Rotron® Fans and Blowers





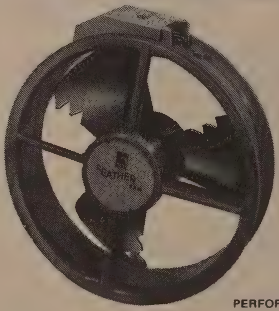
Major® Fan

Newest Rotron tubeaxial fan: a rugged peak performer offering exceptionally high pressures for densely packed spaces.

- unusually high pressure building capacity in 100-200 CFM range
- shallow 2″ depth permits application in tightest spaces
- efficient, permanent split capacitor motor prevents over-heating, down-time
- extremely low noise level ideal for computer room environments
- Major's unique housing design facilitates multiple fan installation
- withstands ambients up to 70°C.
- long life bearings — permanently lubricated
- U.L. yellow card recognition

Model No.	Part No.	Volts	Hz	Watts	CFM
MA2B4	026551	115	50/60	34	260
MA77B4	026553	230	50/60	28	260

For complete information, see Catalog Sheet COM 080



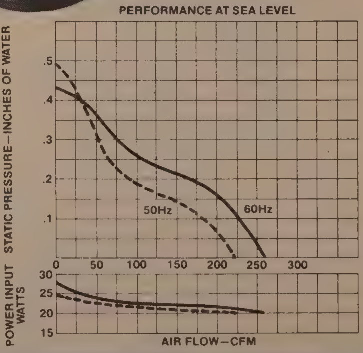
Feather® Fan

High volume air performance where space is severely limited, particularly in depth.

- 270 cfm free air delivery
- 7″ diameter and just 2.47″ depth
- exclusive new Feathered Edge™ blade is extra quiet at free delivery—NC-48
- pre-lubricated stainless steel ball bearings
- withstands ambients from −54°C to +65°C
- multi-slot induction motor, capacitor provided
- UL Yellow Card Recognized

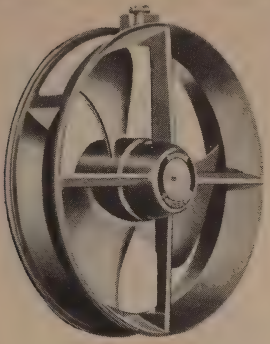
Model No.	Part No.	Volts	Hz	Watts	CFM	Thermal Protector
FF103	026161	115	50/60	20	270	No
FF113	026165	115	50/60	20	270	Yes
FF203	026162	230	50/60	20	270	No
FF213	026166	230	50/60	20	270	Yes

For complete information, see Catalog Sheet COM 090



Rotron® Fans and Blowers

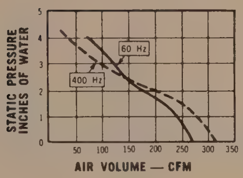
ROTRON
INCORPORATED



Saucer® Fan

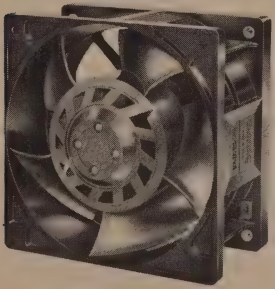
High volume and high pressure both, from a minimum of fan space.

- 275 cfm free air delivery
- generates pressures of over .5" H_2O
- driving motor entirely within hub for minimum depth - 2.50", dia. 7"
- pre-lubricated stainless steel ball bearings
- for ambients from —54°C to 125°C
- clamping rings at venturi ends for easy mounting
- meets all applicable military specifications



Motor Series	Volts	Hz	Watts	CFM
340ZS	115	50/60	25	275

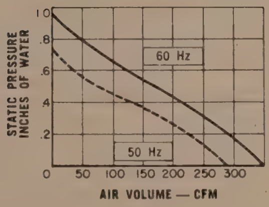
For complete information, see Catalog Sheet MIL 080



Tarzan® Fan

High air volume and pressure combined, for tightly packed cabinets and chassis.

- 340 cfm free air delivery
- patented design gives pressures approaching centrifugal blowers
- unusually high 0.9" H_2O pressure at cut-off
- tough phenolic venturi, die cast aluminum spiders
- double shielded ball bearings
- 3-4 year maintenance-free life at 49°C
- withstands ambients from —18°C to 55°C
- UL Yellow Card Recognized
- 6.91 square x 4.34" depth



Model	Volts	Hz	Watts	CFM
TN3A2 TN3C2	115	50/60	85	340
TN3A3 TN3C3	230	50/60	85	340

*A with terminals, C with leads

For complete information, see Catalog Sheet COM 120

ROTRON INCORPORATED

Rotron® Fans and Blowers

Aximax® 1, 2, & 3

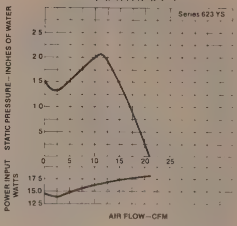
Family of miniature, high-performance air movers for air-borne and other critical space/weight/performance applications.

- free air delivery from 7 cfm to 160 cfm
- optional Altivar® motors automatically increase speed with altitude
- life expectancies from 10,000 hours up at 72°C
- withstands ambients up to 125°C
- sizes: 1.50" x 1.50", 2" x 1.50", and 3" x 2.38"
- weight 4 oz., 4½ oz., and 14 oz. respectively
- meet all applicable military specifications

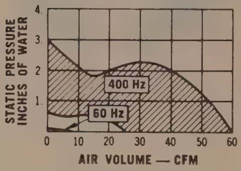
Models for 115 VAC, 1 phase, 400 Hz; 200 VAC, 3 phase, 400 Hz, and 115 VAC 1 phase, 60 Hz (except Aximax 1)

For complete information, see Catalog Sheets,
Aximax 1 - MIL 020
Aximax2, Aximax 3-MIL 040, MIL 030

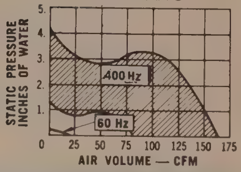
AXIMAX 1

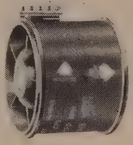


AXIMAX 2



AXIMAX 3





PROPIMAX 3B
PROPIMAX 2
PROPIMAX 3

Propimax® 2, 3, & 3B

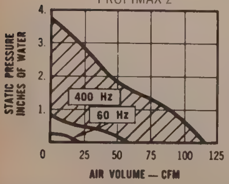
Large-volume and high-pressure air movers for airborne equipment.

- free air delivery from 22 cfm to 190 cfm
- offer pressures as high as 7" H_2O at cut-off
- optional Altivar® motors automatically increase speed with altitude
- life expectancies of 10,000 hours at 14.7 psia and 72°C
- withstand ambients up to 125°C
- size/weight: 3.25" x 1.50" and 6.5 oz., for Propimax 3.75" x 2" and 15.2 oz. for Propimax 3 & 3B
- meet all applicable military specifications

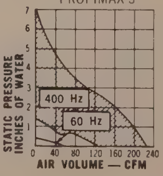
Models for 115 VAC, 1 phase, 400 Hz; 200 VAC, 3 phase, 400 Hz; 115 VAC, 1 phase, 60 Hz

For complete information, see Catalog Sheets,
Propimax 2 - MIL 050 Propimax 3 & 3B - MIL 060

PROPIMAX 2



PROPIMAX 3



Rotron® Fans and Blowers

® ROTRON
INCORPORATED

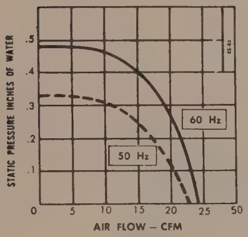
Biscuit® Blower

The only air moving device that fits inside a 1¾" rack panel mounted instrument.

- 25 cfm free air delivery
- 4.75" square and only 1.56" depth
- built around famous Muffin fan features
- delivers sufficient pressure for tightly packaged equipment
- 10 year life expectancy at room ambients
- withstands ambients from −18°C to 72°C
- low NC-42 noise level
- UL Yellow Card Recognized

Model No.	Part No.	Volts	Hz	Watts	CFM
BT2A1	025447	115	50/60	16	25
BT3A1	025449	230	50/60	17	25

For complete information, see Catalog Sheet COM 130

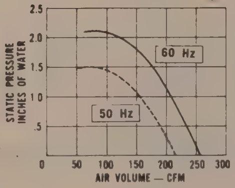


Centrimax® Blower

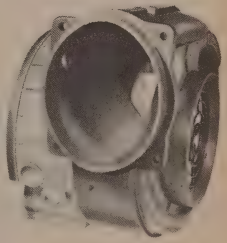
Compact, efficient and versatile blower for use where system impedance is relatively high.

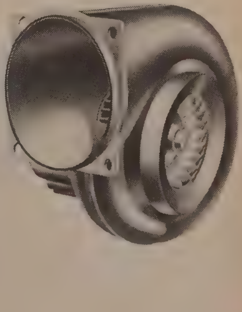
- over 3" of static water pressure at 50-300 cfm available with CX33A
- motor completely integrated with impeller design
- oversize double-shielded ball bearings, lubricated for life
- adjustable blast direction - housing rotates 360°
- installs in any attitude, from any of three mounting surfaces
- accepts standard, readily available round ducting
- housing of flame retardant polyester, won't bend or rust
- operates from −20°C to 55°C

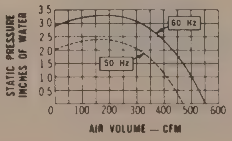
For complete information, see Catalog Sheet



CX29







CX33

ROTRON INCORPORATED

Rotron® Fans and Blowers

Spiral® Blowers

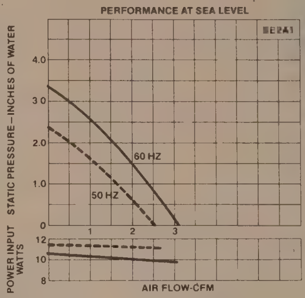
Spiral Blowers are revolutionary new motor/blower packages that develop unusually high positive or negative air pressure with low-to-moderate air volume. There are no sliding seals or vanes. No brushes or commutators to wear or cause RF interference. Extra wide, lubricated-for-life ball bearings provide the only contacting surfaces.

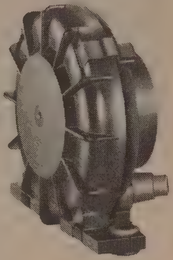
Mini-Spiral®

The advantages of spiral blowers in an ultra-compact high-performance unit.

- suction as high as 3 inches H_2O at shut-off
- compact 4.16″ diameter x 1.81″ depth
- fully encapsulated stator for protection against environment
- double shielded, stainless steel ball bearings
- maintenance-free life of six years
- low 10 watt power consumption
- UL Yellow Card Recognition
- weight only 17 oz.

For complete information, see Catalog Sheet COM 140



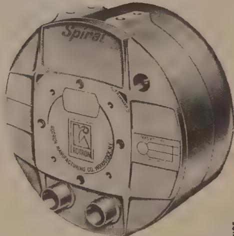


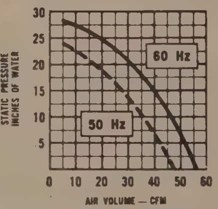
Spiral® Simplex

Reliable, economical, versatile source of high pressure, high vacuum.

- pressures up to 30″ wg, air flow to 55 cfm
- compact 10″ diameter x 5.87″ depth
- high strength die-cast aluminum housing
- for ambients to 55°C at normal 5 to 15 cfm, higher as air flow is increased
- optional trimmer valves at inlet and outlet allow precise adjustment for system requirements
- optional accessories include filters, pressure gauge clamps, thermal protector, and terminal box
- weight 21.9 lbs.

For complete information, see Catalog Sheet HIP 020

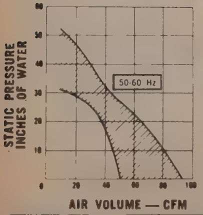




Spiral® Duplex

Two independent air sources from a single compact unit.

- pressures/vacuums 2 psig, pre-set to requirements at the plant
- air delivery up to 94 cfm
- oil free air - no possible contamination
- low 3300 rpm speed for quiet and long life
- mounts in any attitude, with four ¼-20 holes in two locations
- economically priced
- weight 36 lbs.



For complete information, see Catalog Sheet HIP 020

Axel

Must You Meet MIL-STD 461?

Here's where EXPERIENCE counts!

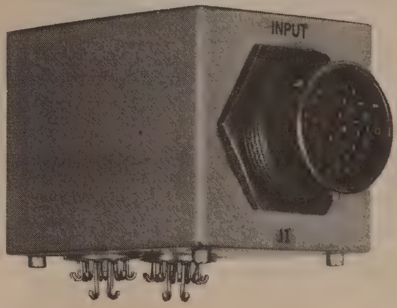
AXEL computer-aided designed filters will enable your system to meet the exacting requirements of MIL-STD 461 and MIL-F-15733.

Initial system analysis is our specialty.

AXEL ELECTRONICS is a highly experienced organization specializing in the design and production of standard and custom built filters.

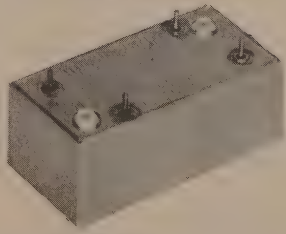
We offer a complete line of high quality, long life, high performance filters from low signal level devices to very high power line filters including special multi-circuit packages.

A total filter design service is available backed by a complete QC monitored manufacturing facility to meet your most stringent requirements.



OUR EXPERIENCE INCLUDES:

- Active and Passive Electric Wave Filters (MIL-F-18327)
- Low Pass - High Pass - Band Pass - Band Reject Filters
- Constant Delay Filters
- Delay Equalizers
- Signal Line Filters
- Transmission Line Filters



Ask for our complete catalog and
Look to the Leader in Filter Technology . . .

AXEL ELECTRONICS, INC.
A UNIT OF GENERAL SIGNAL CORPORATION
134-20B Jamaica Avenue, Jamaica, N.Y. 11418
(212) AX 1-3900 • TWX: 710-582-2618

Our complete service includes applications engineering and fast prototype delivery. Send us your specifications and/or applications and we'll do the rest.

Want a low-pass RFI/EMI filter with small size? See AMP.

Shown approximately twice actual size.

You'll find exactly the one you're looking for among a wide variety of rugged, single-piece, center-conductor RFI/EMI low-pass filters with solder or bolt-in mountings.

Features.

- Three sizes (standard, miniature and subminiature) suitable for a wide variety of applications.
- Standard or low-capacitance versions accommodate a wide range of cutoff frequencies.
- High insertion loss performance versus size.
- Rugged, single-piece construction offers excellent resistance to shock and vibration.

Environmental and physical specifications.

Salt Spray: MIL-STD-202, Method 101, Cond. A; 96 hrs. (salt solution 20%)
Temperature Cycling: MIL-STD-202, Method 102. Cond. D; except −55°C to +125°C
Immersion Test: MIL-STD-202, Method 104, Cond. A
Barometric Pressure: MIL-STD-202, Method 105, Cond. B
Moisture Resistance: MIL-STD-202, Method 106; 50 VDC applied
Vibration: MIL-STD-202, Method 204, Cond. D
Resistance to Soldering Heat: MIL-STD-202, Method 210, Cond. B
Shock: MIL-STD-202, Method 213, Cond. C
Terminal Strength: MIL-STD-202, Method 211, Cond. A 5 lb. pull test
Temperature range: −55°C to +125°C, without voltage derating.
Note. The following military standards and specifications are applicable to all series filters. MIL-STD-202, MIL-STD-220, and MIL-F-15733

Electrical specifications.

Standard-size 4000 pf filters (Series 55).

Maximum voltage rating (to +125°C, 60-400 Hz): 200 VDC; 125 VAC.
Maximum current rating: 15A (load); .5A (RF).
Minimum capacitance (either terminal-to case): 4000 pf @ 1 KHz (rms) @ +25°C.
Dielectric withstanding voltage (either terminal-to case): 500 VDC for 5 sec.
Minimum no-load insertion loss (per MIL-STD-220 @ +25°C):
3 db @ 2 MHz 50 db @ 100 MHz
10 db @ 10 MHz 90 db @ 300 MHz to 18 GHz.
Minimum insulation resistance (either terminal-to case): 500 megohms @ 100 VDC and +25°C.
Maximum DC resistance between in/out terminals (except filter P/N 859550-3): .002 ohms @ +25°C.

Miniature 3000 pf filters (Series 25).

Maximum voltage rating (to +125°C, 60-400 Hz): 125 VDC; 85 VAC.
Maximum current rating: 15A (load); .3A (RF).
Minimum capacitance (either terminal-to case): 3000 pf @ 1 KHz (rms) @ +25°C.
Dielectric withstanding voltage (either terminal-to case): 375 VDC for 5 sec.
Minimum no-load insertion loss (per MIL-STD-220 @ +25°C):
10 db @ 10 MHz 55 db @ 300 MHz
30 db @ 100 MHz 65 db @ 500 MHz to 18 GHz.
Minimum insulation resistance (either terminal-to case): 500 megohms @ 100 VDC and +25°C.
Maximum DC resistance between in/out terminals: .002 ohms @ +25°C.

Subminiature 1500 pf filters (Series 25).

Maximum voltage rating (to +125°C, 60-400 Hz): 125 VDC; 85 VAC.
Maximum current rating: 15A (load); .3A (RF).
Minimum capacitance (either terminal-to case): 1500 pf @ 1 KHz (rms) @ +25°C.
Dielectric withstanding voltage: (either terminal-to case): 375 VDC for 5 sec.
Minimum no-load insertion loss (per MIL-STD-220 @ +25°C):
5 db @ 10 MHz 40 db @ 500 MHz
20 db @ 100 MHz 50 db @ 1000 MHz to 18 GHz.
Minimum insulation resistance (either terminal-to case): 500 megohms @ 100 VDC and +25°C.
Maximum DC resistance between in/out terminals: .002 ohms @ +25°C.

Standard-size, low-capacitance filters (Series 45).

Maximum voltage rating (to +125°C, 60-400 Hz): 200 VDC; 125 VAC.
Maximum current rating: 15A (load); .5A (RF).
Maximum capacitance (either terminal-to case):
300 pf @ 1 KHz (rms) @ +25°C;
390 pf @ 1 KHz (rms) @ +125°C.
Dielectric withstanding voltage: (either terminal-to case): 500 VDC for 5 sec.
Minimum no-load insertion loss (per MIL-STD-220 @ +25°C):
3 db @ 25 MHz 45 db @ 1 GHz
35 db @ 500 MHz 70 db @ 5 to 18 GHz.
Minimum insulation resistance (either terminal-to case): 500 megohms @ 100 VDC and +25°C.
Maximum DC resistance between in/out terminals (except filter P/N 859604): .002 ohms @ +25°C.

Miniature low-capacitance filters (Series 15).

Maximum voltage rating (to +125°C, 60-400 Hz):
125 VDC; 85 VAC.
Maximum current rating: 15A (load); .3A (RF).
Maximum capacitance (either terminal-to case):
225 pf @ 1 KHz (rms) @ +25°C;
280 pf @ 1 KHz (rms) @ +125°C.
Dielectric withstanding voltage (either terminal-to case):
375 VDC for 5 sec.
Minimum no-load insertion loss (per MIL-STD-220 @ +25°C):
3 db @ 50 MHz
25 db @ 500 MHz
35 db @ 1.0 GHz
55 db @ 5.0 to 18 GHz.
Minimum insulation resistance (either terminal-to case):
500 megohms @ 100 VDC and +25°C.
Maximum DC resistance between in/out terminals:
.002 ohms @ +25°C.

Subminiature low-capacitance filters (Series 15).

Maximum voltage rating (to +125°C, 60-400 Hz):
125 VDC; 85 VAC.
Maximum current rating: 15A (load); .3A (RF).
Maximum capacitance (either terminal-to case):
130 pf @ 1 KHz (rms) @ +25°C;
170 pf @ 1 KHz (rms) @ +125°C.
Dielectric withstanding voltage (either terminal-to case):
375 VDC for 5 sec.
Minimum no-load insertion loss (per MIL-STD-220):
3 db @ 150 MHz
16 db @ 1.0 GHz
35 db @ 5.0 GHz
42 db @ 10 GHz to 18 GHz
Maximum insulation resistance (either terminal-to case):
500 megohms @ 100 VDC and +25°C.
Maximum DC resistance between in/out terminals:
.002 ohms @ +25°C.

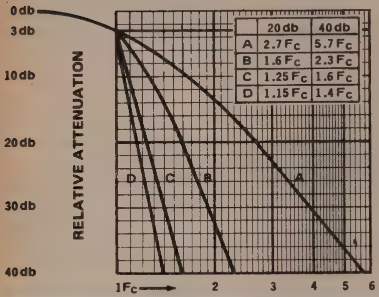
CUSTOM-BUILT L-C FILTERS

LOWPASS

PROTOTYPES CAN OFTEN BE DELIVERED IN LESS THAN 3 DAYS

TYPES: BUTTERWORTH, TCHEBYCHEFF & ELLIPTIC FUNCTION

The lowpass filters listed below are typical units that we build. We do manufacture lowpass filters with any cut-off frequency between 200Hz and 400MHz.



SIZE (INCHES)

Sealed in Metal Can. Printed Circuit Terminals, End Terminals or Connectors available where applicable:

J — 1.00 x .750 x .500
K — 1.50 x 1.000 x .800
L — 2.00 x 1.625 x 1.125
M — 3.00 x 1.625 x 1.125
N — 4.00 x 1.500 x 1.250
O — 5.00 x 1.500 x 1.250
P — 6.00 x 1.500 x 1.250
Q — 7.00 x 1.500 x 1.250

Encapsulated in Epoxy Container:

S — 1.25 x .875 x .625
U — 2.00 x 1.125 x .750
W — 2.50 x 1.125 x .750
X — 3.00 x 1.500 x 1.000
Y — 4.00 x 1.500 x 1.125
Z — 4.50 x 2.500 x 1.375

CUSTOM-BUILT L-C FILTERS LINEAR PHASE LOWPASS

LINEAR PHASE LOWPASS FILTERS

Types:
Bessel, Gaussian, Equal Phase Ripple and Transitional (Gaussian to 6 db).

Frequency Range:
400Hz to 50MHz.

Impedance Range:
50 ohms to 20K ohms.

Low Delay and Phase Distortion in Passband.

Very Low Pulse Distortion (Low Overshoot).

Construction:
Epoxy encapsulated or sealed in metal can.

DELIVERY: PROTOTYPES CAN OFTEN BE DELIVERED IN LESS THAN 3 DAYS

The lowpass filters listed below are typical units that we build. We do manufacture linear phase lowpass filters with any cut-off frequency between 1KHz and 50MHz.

SIZE (INCHES)

Sealed in Metal Can. Printed Circuit Terminals, End Terminals or Connectors available where applicable:

K — 1.50 x 1.000 x .800
L — 2.00 x 1.625 x 1.125
M — 3.00 x 1.625 x 1.125
N — 4.00 x 1.500 x 1.250

Encapsulated in Epoxy Container:

U — 2.00 x 1.125 x .750
W — 2.50 x 1.125 x .750
X — 3.00 x 1.500 x 1.000
Y — 4.00 x 1.500 x 1.125
Z — 4.50 x 2.500 x 1.375

The graph at right illustrates ideal delay characteristics.
Consult table below for typical realizable values.

Shape Factor	Max. Phase Distortion	Maximum Overshoot	Typical Delay Variation
A	±2°	1.5%	3%
B	±2°	1.5%	3%
C	±2°	1.5%	3%
D	±3°	3%	8%
E	±7°	6%	13%
F	±12°	9%	17%

	20 db	40 db
A	3.10 Fc	6.90 Fc
B	2.70 Fc	4.30 Fc
C	2.50 Fc	3.50 Fc
D	2.20 Fc	3.10 Fc
E	1.85 Fc	2.30 Fc
F	1.70 Fc	1.90 Fc

WRITE FOR CATALOG

LINEAR PHASE BANDPASS FILTERS

Type:
Gaussian-type offering unusual excellence in fast cut-off and low delay variation characteristics.

Frequency Range:
1KHz to 25MHz.

Impedance Range:
50 ohms to 10K ohms.

Exceptionally fine phase linearity combined with good impulse response.

Construction: Epoxy encapsulated or sealed in metal can.

DELIVERY: PROTOTYPES CAN OFTEN BE DELIVERED IN LESS THAN 3 DAYS

The linear phase bandpass filters listed below are typical units that we build. We do manufacture linear phase bandpass filters with any center frequency between 1KHz and 25MHz.

SIZE (INCHES)

Sealed in Metal Can. Printed Circuit Terminals, End Terminals or Connectors available where applicable:

L — 2.00 x 1.625 x 1.125
M — 3.00 x 1.625 x 1.125
N — 4.00 x 1.500 x 1.250

Encapsulated in Epoxy Container:

W — 2.50 x 1.125 x .750
X — 3.00 x 1.500 x 1.000
Y — 4.00 x 1.500 x 1.125
Z — 4.50 x 2.500 x 1.375

Maximum Phase Distortion over 3 db Passband	Typical Delay Variation over 3 db Passband

CUSTOM-BUILT L-C FILTERS

BANDPASS

BANDPASS FILTERS

Types:
Butterworth, Tchebycheff, and Elliptic Function.

Frequency Range:
400Hz to 150MHz.

Impedance Range:
50 ohms to 10K ohms.

Construction: Epoxy encapsulated or sealed in metal can.

DELIVERY: PROTOTYPES CAN OFTEN BE DELIVERED IN LESS THAN 3 DAYS

The bandpass filters listed below and on following page are typical units that we build. We do manufacture bandpass filters with any center frequency between 200Hz and 150MHz.

SIZE (INCHES)

Sealed in Metal Can. Printed Circuit Terminals, End Terminals or Connectors available where applicable:

L —2.00 x 1.625 x 1.125
M —3.00 x 1.625 x 1.125
N —4.00 x 1.500 x 1.250
O —5.00 x 1.500 x 1.250
P —6.00 x 1.500 x 1.250
Q —7.00 x 1.500 x 1.250
NN—4.00 x 4.000 x 1.250
OO—5.00 x 4.000 x 1.250

Encapsulated in Epoxy Container:

V —1.75 x 1.750 x .875
W —2.50 x 1.125 x .750
X —3.00 x 1.500 x 1.000
Y —4.00 x 1.500 x 1.125
Z —4.50 x 2.500 x 1.375

RADIO INTERFERENCE
FILTERS

FOLLOW THESE EASY STEPS

1. DETERMINE CURRENT AND VOLTAGE OF CIRCUIT WHERE THIS FILTER WILL BE USED.
2. OBTAIN BASIC PART NUMBER FROM TABLE BELOW BASED ON SUPPRESSION REQUIREMENTS.
3. SELECT MOUNTING STYLE AND TERMINAL TYPE FROM FACING PAGE.
4. BUILD UP PART NUMBER THIS WAY →

70 D 6.3 G P 11

BASIC PART NUMBER — MOUNTING STYLE — TERMINAL TYPE

RFI/EMI TESTING LABORATORY • FCC • MILITARY • RTCA

All-Tronics also maintains a complete RFI/EMI Testing Laboratory. The combination of large modern RFI shielded rooms, the latest in interference testing instrumentation, and top level know-how provide a complete testing service that is capable of covering all of the latest requirements of FCC, Military, Commercial and foreign interference specifications. The laboratory is an approved FCC testing lab specializing in Part 15 and Part 18 compliance testing and consulting. The military interference testing capabilities include testing to specifications such as MIL-STD-220A, MIL-STD-461A, MIL-STD-6181D, MIL-STD-826A and MIL-I-16910C.

In addition to RFI/EMI interference levels caused by your equipment, All-Tronics can also perform susceptibility testing to determine the effects of RFI/EMI emissions on your product. Along with FCC and Military interference testing, All-Tronics also performs interference tests specifically prepared by the Radio Technical Commission for Aeronautics for the commercial aviation industry. In the commercial power field, All-Tronics has and is capable of performing site surveys on power lines, power stations and sub-stations. Test plans per MIL-STD-831 and consultation on test methods for your products are also available.

MEASURED IN A 50Ω SYSTEM PER MIL-STD-220A

FOR PLF-H SERIES —
INSERTION LOSS: 100 db from 14KHz to 10GHz measured in accordance with MIL-STD-220A, load condition.

ALSO MEASURED UNDER FULL LOAD CONDITION FROM 14KHz TO 20MHz WITH EXTENDED RANGE BUFFER NETWORKS.

FOR PLF-R SERIES —
INSERTION LOSS: 100 db from 14KHz to 10GHz measured in accordance with MIL-STD-220A, load condition.

FEATURES:

- EXTREME RELIABILITY: Special features specifically developed for secure communications areas, shielded rooms, etc., in continuous service for years without failure.
- FIELD REPLACEABILITY: Each individual phase filter is easily replaceable in field without the use of any special tools.
- LEAKPROOF: Each individual phase filter, completely hermetically sealed and leakproof.
- INDESTRUCTIBLE TERMINALS: Terminal assemblies are made of indestructible alumina ceramic.
- FLEXIBLE LEADS: Flexible leads to the electrical connection preventing possibility of damage to terminals.
- NO FIRE OR EXPLOSIVE HAZARD: Non-flammable impregnant used wherever applicable.
- MAXIMUM VOLTAGE DROP: 2 volts.
- MAXIMUM OPERATING TEMPERATURE: 85°C.
- OVERLOAD SAFETY: 140% of rated current for 15 minutes in compliance with MIL-F-15733E. Short term current capability in excess of 10 times rating without damage.

For Architects' & Engineers' Specifications,
Request Catalog AR-73

GENERAL

The filter herein described shall be designed for filtering of radio frequency interference and to meet the requirements of Military Specifications MIL-F-15733, where applicable. These filters may be used with other electrical devices to enable the devices to meet the requirements of MIL-I-26600, MIL-I-16910, MIL-I-6181, MIL-I-11748, MIL-STD-461, 462, 463, FED-STD-222, and FCC Specification Part 18. Also, DCA specifications and others developed for special equipment and systems applications.

ELECTRICAL

INSERTION LOSS: The filter shall provide an insertion loss of 100 db minimum over its indicated frequency range when measured in accordance with applicable MIL-STD-220A, full load condition, by a government approved laboratory.

For PLF-H Series — Insertion loss: 100db from 14KHz to 10GHz measured in accordance with MIL-STD-220A, load condition. ALSO MEASURED UNDER FULL LOAD CONDITIONS FROM 14KHz TO 20MHz WITH EXTENDED RANGE BUFFER NETWORKS.

For PLF-R Series — Attenuation: 100db from 14KHz to 10GHz measured in accordance with MIL-STD-220A, load condition.

CURRENT RATING: The filters shall be capable of withstanding 140% of rated current overload for 15 minutes without any deterioration.

VOLTAGE: The filters shall be capable of operating continuously at full-rated voltage and of withstanding an over-voltage test of twice the rated voltage for one minute. Maximum voltage drop shall not exceed 2 volts when measured in accordance with MIL-F-15733E. Maximum operating temperature: 85°C.

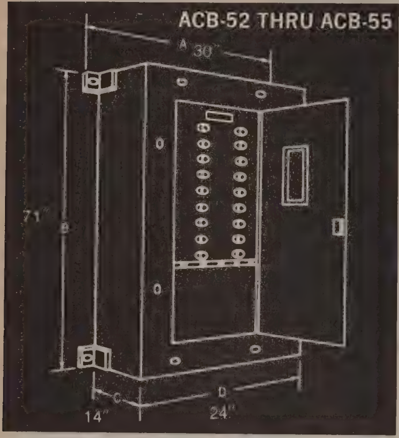
RF FILTERED & SHIELDED
CIRCUIT BREAKER
PANELBOARDS

ACB-50 SERIES • ACB-10 SERIES

INSERTION LOSS: 100db from 14KHz to 10GHz in accordance with MIL-STD-220A, load condition.

ACB-50 SERIES SPECIAL: ALSO MEASURED UNDER FULL LOAD CONDITION FROM 14 KHz TO 20 MHz WITH EXTENDED RANGE BUFFER NETWORKS.



ACB-50 SERIES: IAW DCA CIR300-175-1 CHANGE 5

FEATURES:

Designed to prevent undesired emanation of intelligence from secure communication installations by conducted or radiated RF energy.

The most important feature is that the circuit breaker panelboard is completely RF shielded even when the front door of the cabinet is open. RF integrity is maintained by mounting the RF Filters in an internal shielded compartment with RF gasketing of a corrosion resistant metal assuring proper RF contact between the filters and the shield wall.

The circuit breaker actuator mechanisms are designed so that their RF shielding effectiveness will be maintained for the life of the panelboard. Each circuit breaker toggle is operated by a wave-guide assembly in order to maintain the shielding effectiveness of the operating mechanism.

FILTER MODULE CASES

These cases will accommodate any of the following tubular filter types in any desired combination: PLF-1110, PLF-1111, PLF-1112, PLF-1113, PLF-1114, PLF-1115.

Request Catalog AR-73

These ALL-TRONIC filters are used in teletype, communication and telephone lines in conjunction with shielded and controlled facilities to achieve secure communication standards such as those required for DCA RED/BLACK ENGINEERING — INSTALLATION CRITERIA (U) per Specification DCA CIR C175-6A; DCA ENSP-422-5C, DCA C 300-175-1; and BuShips Inst. 011120.12C.

The ALL-TRONIC low-pass filters, meet or exceed the insertion loss characteristics, and all other requirements, of the above specifications. All units are hermetically sealed and housed in plated metal cases provided with mounting flanges and/or threaded necks for convenient mounting. Terminals are of compression-type glass, solder sealed. Duty cycle is continuous for all units. When installed on a shield-room wall, the filters remove spurious high-frequency energy, while providing a continuous RF-tight shield for the filtered signal. ALL-TRONIC also supplies assemblies of any combination of filters, completely pre-wired to terminal strips and enclosed in an RF-tight cabinet.

ALL ACCESSORIES AND FULL DETAILS DESCRIBED IN ALL-SHIELD CATALOG SE-2

ALL-SHIELD ENCLOSURES, INC.

All-shield designs, manufactures and installs a complete line of pre-fabricated, copper mesh and welded steel RF enclosures for medical, laboratory, electronics and governmental agencies. **All-shield** enclosures are designed to specifications 65-5 and 65-6 and also to the performance levels required by critical governmental agencies. **All-shield** produces a superior line of light weight doors. Both automatic and manual required by the discriminating user. The manual door in addition to light weight and meeting performance levels of 65-5 requires no elaborate latching devices to achieve attenuation. The automatic door uses an electric single point latch to eliminate the hand operation. Of importance, the manual door weighs approximately 100 lbs.; total weight of the door and frame approximately 275 lbs.; with the electrical operation the total weight is approximately 295 lbs. **All-shield** thru the application of materials and designs offer a new state of the art in enclosure design at lowered cost.

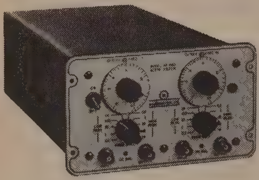
COMSTRON·SEG MULTIMETRICS DIVISION ACTIVE FILTERS

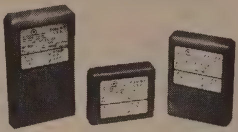
TUNABLE & FIXED 0.001Hz to 2MHz



SERIES AF-100, AF-200

20Hz to 2MHz, 0.2Hz to 20kHz; tunable; ruggedly built, low cost package. Designed for a wide range of applications.

- Top performance and versatility
- Individual channels are independent High or Low Pass Butterworth Filters
- Interconnected channels are Band Pass, Band Reject or have sharpened attenuation slopes
- Selectable Time Domain response for optimum transient (pulse) behavior
- All units rack mountable
- Quick delivery!



Fixed frequency, mini-sized modules. Low, high, band pass, band reject and notch functions, Butterworth, Chebyschev and elliptic responses. Frequencies from 0.001Hz to 100kHz. Other frequencies, response characteristics and pole configurations available.

SERIES AF-850A

35Hz to 3500Hz; ±1% accuracy; tunable; ideal for notched noise measurements and waveform analysis. Fully compatible with telephone channel transmission measuring techniques and equipment.

SERIES AF-400

0.001Hz to 99.9kHz; digital switch tuning; superb accuracy and stability. 115/230VAC or battery operated.

RFI Powerline Filters

S, V & W SERIES* These filters combine line-to-ground RFI filters with additional circuitry to reduce low frequency line-to-line noise. They are designed to protect equipment from malfunctions due to conducted line interference coming into the equipment from the line (susceptibility). They also provide needed noise suppression to allow most equipment to meet VDE, CISPR and CSA specifications for conducted emission. They are particularly effective when applied in equipment using switching type power supplies, SCR and T²L circuits. **NEW**

H SERIES* These filters are designed for use in health care equipment and are recognized under UL 544 specification. Model 6H1 is suited for patient care equipment. Models 6H4 & 6H9 are suited for non-patient equipment (equipment that is intended for use where contact with the patient is unlikely). **NEW**

B SERIES* These filters are general purpose types—effectively providing RFI control of line to ground noise in a small size at lowest cost. They are available in a broad selection of current ratings and termination styles.

EF SERIES* Now VDE approved. These filters incorporate the special IEC (International Electrotechnical Commission) power line connector. This connector has 4 mm minimum pin spacing and complies with all current and proposed requirements for use with industrial and test equipment in the European market where a detachable power cord is part of the equipment design. The EF series features extremely low leakage current; meets IEC, BSI, VDE, CSA and ASA requirements for data processing equipment. Minimum insertion loss 2.0 MHz to 5.0 MHz 50 DB.

K SERIES* These filters are similar to the B Series but have the added feature of being extremely effective in the control of line to line as well as line to ground RFI interference. The K Series is particularly suited where pulsed, continuous and/or intermittent RFI interference is present and should be used where line to line interference protection is required.

R SERIES* These filters are dual T section RFI powerline filters and provide premium performance at moderate cost. They are well suited for low impedance loads where noisy RFI environments are present. At frequencies as low as 150 KHz, the R Series has an insertion loss as high as 45 DB. They control pulsed, continuous and/or intermittent interference. The R Series provides extremely low leakage current without deterioration of insertion loss characteristics.

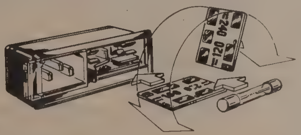
THE VS & F VOLTAGE SELECTING & FUSED CONNECTOR



Available to the industry for the first time in one unit a voltage selector switch, a connector and a fuse. The VS & F allows equipment to operate anywhere in the world. FOUR OPERATING VOLTAGES — The VS & F and a simple transformer modification allows the equipment to operate at 100, 120, 220 or 240 volts 50-400 Hz. Voltage selection is made with a unique voltage selector card. EASY INSTALLATION — Only one rectangular cut-out is required for easy snap in mounting. BUILT-IN SAFETY — The fuse and voltage selector card are enclosed behind a see-thru cover which cannot be moved until the power cord is removed from the equipment. UL & IEC — The VS & F has an IEC approved connector, UL SE-01 fire retardant polyester housing and complies with UL and IEC requirements. RFI FILTER — Available with RFI filter (see EF Series specifications for electrical data.) Minimum insertion loss at .5 MHz is 24 DB, at 2.0 MHz to 5.0 MHz 50 DB.

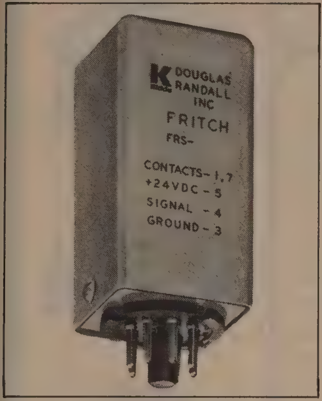
FRITCH® — Frequency Responsive Switch



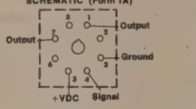
The FRITCH® is a sensitive, rapid tone detector combining solid state circuitry with a Reed Relay output. Two basic types are made:

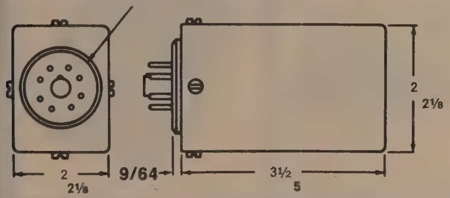
Type I — Used where only one frequency is present.

Type II — Used where several frequencies are present.

DOUBLE TONE FRITCHes detect two frequencies. They are prefiltered to operate in the presence of several frequencies and can incorporate optional time delays to minimize the effect of spurious signals. They are ideal for detecting touch tone pairs over telephone lines.

SCHEMATIC (Form 1A)





BOLD DIMENSIONS ARE FOR DOUBLE TONE FRITCH

LIGHT DIMENSIONS ARE FOR SINGLE TONE FRITCH

Specifications

FREQUENCY RANGE: 7 Hz to 100 KHz.

BANDWIDTH: Must Operate: ±2% fo. May Operate ±5% fo.

NORMAL CHANNEL SPACING: 11%.

INPUT SIGNAL LEVEL: 5 VRMS, 1 VRMS or 0.7 VRMS (odbm). Special to .050 V.

INPUT IMPEDANCE: 25,000 ohms typical.

RESPONSE TIME: To 75 pulses per second depending on frequency.

DC POWER INPUT: 12 V or 24 VDC ±10% (other voltages available).

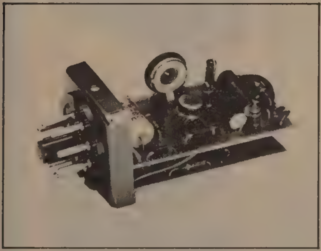
OUTPUT CONTACTS: Form 1A, 2A, 1B, 2B, 1C or 1A1B. Solid state output optional.

CONTACT RATING: Form A or B — 10 W, 0.5 A or 250 VDC Max. Form C — 3 W, 0.25 A or 28 VDC Max.

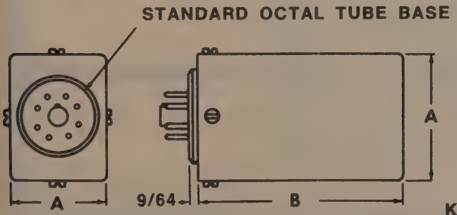
ENVIRONMENTAL LIMITS: Shock: 50 g; Vibration: 35 g; Temperature: −0°C to +50°C.

® Registered trademark of Douglas Randall Frequency Responsive switch. (Patent 3584275)

Oscillators

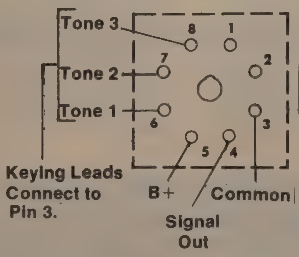


Douglas Randall Oscillators are solid state RC devices. The oscillator circuit operates continuously. The output stage is gated to a low impedance driver circuit, insuring extremely rapid signal response and freedom from frequency shift due to keying. Keying is accomplished by connecting the proper terminal to the power supply common (see schematic). The oscillators have reverse polarity protection incorporated in the unit to protect them if improperly connected. Single, double and triple tone versions are available in standard octal plug housings. They are also available for P.C. Mounting.



Dimension Single Tone	Double or Triple Tone
A — 1½	A — 2
B — 2¾	B — 3½

SCHEMATIC



Specifications

DC POWER INPUT: 12 V or 24 VDC ±10% (other voltages available).

LOAD IMPEDANCE: 600 ohms.

OUTPUT SIGNAL: Standard, 1 V RMS.

DISTORTION: 1%.

RESPONSE TIME: 50 Microseconds.

DECAY TIME: 50 Microseconds.

FREQUENCY RANGE: ±1%: 0°C to 40°C. ±1.5%: −20° to +65°.

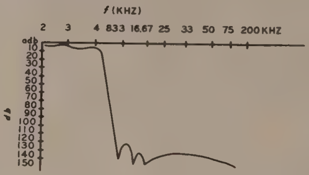
SONAR FILTERS IN PHASE AND AMPLITUDE MATCHED SETS

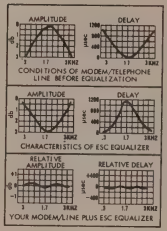
Linear phase bandpass and lowpass filters, with phase and amplitude matched passbands. Matching can be accomplished for any number of channels; generally three filters made a set, but as many as 900 have been phase and amplitude matched. ESC produces filters for Sonobuoys and audio comb analyzers.

HIGH ATTENUATION 140 db AIRCRAFT RADIO LOW PASS FILTERS



ESC is the leading manufacturer of high attenuation filters. These filters provide more than 140 db attenuation of harmonic frequencies in the audio band and have controlled minimum phase shift. Size is only 1.2 x 1.0 x .58.

ESC EQUALIZERS



ESC produces custom designed equalizers for group delay and amplitude distortion. In particular, ESC produces custom designed compromise equalizers for modem manufacturers to correct for transmission line and modem produced amplitude and phase (delay) distortion. Equalization allows modem sets to be used at highest possible rates with minimum distortion. Contact ESC for your specific requirement.

FILTERS FOR THE TELEPHONE INDUSTRY

ESC has a full line of 1010 Hz Band reject filters. Low profile versions for standard telephone testing production equipment. Available in 600 Ω and 900 Ω balanced and unbalanced versions to "Western Electric" specifications.

2600 Hz Band reject filters available to standard "Bell" specifications or in miniaturized version with height approximately ½". Low cost for standard "SF" Signalling equipment.

ESC TELEPHONE LINE SIMULATORS

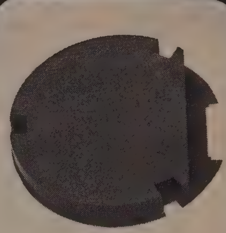
They provide voice-band data systems users with nominal worst case conditions of amplitude and envelope delay of Bell Telephone voice bandwidth data channel 3002 and C1, C2 and C4 conditioning.

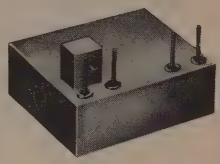
BROAD BAND VIDEO TRANSFORMERS

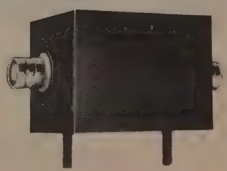
Series of extended wide band transformers covering frequency ranges up to 8 Mhz. Applications include impedance matching, interstage coupling, phase inversion, and elimination of ground loop problems encountered in video transmission. See photo and write for more details.

ULTRA SHARP HIGH SPEED DATA MODEM FILTERS

ESC produces a series of lowpass, bandpass and band suppression filters in 60 Khz to 108 Khz range for use in high speed (150 Kbps) data modems. Filters have very sharp attenuation characteristics, low group delay distortion and more than 60 db intermodulation distortion and are made in compact sizes for PC board capability.







The filters described above represent only a small segment of our total capability. ESC also designs and manufactures, typically . . .

VIDEO	Fixed programmable and mechanically-variable delay lines for the TV croadcast industry, including video cable simulators and voltage variable delay lines.
HI-REL	Proven design, manufacturing capabilities, and facilities encompassing all quality levels dictated by MIL-I-45208 and MIL-Q-9858A.
SONAR	Delay lines used in beam forming systems. These units are manufactured to precision tolerances and are supplied in matched sets or groups.
ATC	Precision tapped delay lines for Air Traffic Control systems of all types, IFF, Beacon Systems, Tacan, Vortac, etc.

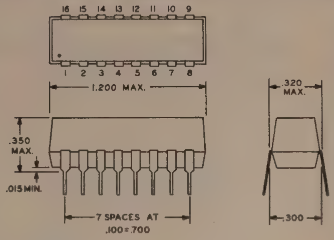
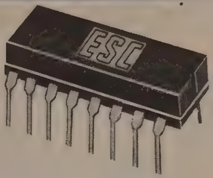
DIP LOW PASS FILTER SERIES



PIN 1 – IN
PIN 8 – OUT
PINS 9 & 16 – GND



SPECIFICATIONS:

- Insertion Loss: less than .5 db at .1 Fc
- Ripple: less than 1 db in Passband to Fc
- Attenuation: less than 3 db to Fc
  greater than 50 db at 3 Fc
- Operating Temp: – 55°C to + 125°C
- Built to conform to applicable portions of MIL-F-18327
- Mounting: Standard 16 Pin configuration
- For other filter types in DIP configuration contact plant

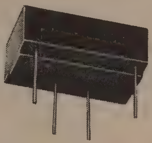
ESC DUAL-IN-LINE DIF FILTERS



Five series of filters, three lowpass and two highpass. As example DIF-L39 lowpass series is listed below. Also available is linear phase series DIF-LP, lowpass series DIF-L20, highpass series DIF-H20 and DIF-H39. Full specifications for attenuation and typical characteristics such as phase shift, group delay and pulse response are presented in catalog. A bandpass filter can be formed by tandem connection of a lowpass and highpass (minimum bandwidth is one octave).

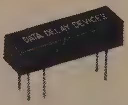
ACTIVE FILTERS



SPECIFICATIONS

- **Transfer characteristics** – Butterworth, Bessel, Tchebyshev.
- **Gain in pass-band** – 0 db ±.2db
- **Cut-off frequency accuracy** – ±2% @ – 3 db
- **Maximum imput voltage** – 10 volts peak.
- **Supply voltage** – ±15 volts min., ±18 volts max.
- **DC drift** – 20uV/°C typical.
- **Temperature range** – 0°C to 70°C (standard), -55°C to 125°C (on request).
- **Temperature/Coefficient** – .03%/°C. better on request.

electrocube filters

Electrocube has developed literally thousands of EMI filters, to meet the rigorous specialized requirements of military, aerospace and commercial applications. Company designs are found on Saturn and Apollo LEM space vehicles, Minutemen and Titan missiles, C-5A and other current aircraft, and on computers and UL listed commercial equipment.

Filters have been designed with current carrying capacities from 0.1 to 500 amps, voltages to 5000 VDC and 600 VAC, and for DC to 1000 Hz and intermittent or continuous duty. Single and multicircuit configurations are also offered, including L, Pi (also with feed-through capacitors) and T. Models include low pass, high reject, noise, interstage and line, screen room, and heavy duty industrial filters.

The important factor of packaging is also a prime consideration. Conformance to customer specified space, mounting, terminal and environmental requirements are met, and manufacturing tolerances of ±0.005 on mounting surfaces and ±0.015 on case dimensions can be provided. Case interiors are usually completely encapsulated for electrical isolation and environmental protection.

Electrocube maintains an experienced engineering group and complete in-house facilities for the production and testing of EMI filters. An extensive inventory of existing designs provides the benefits of standardization to non-standard filter design and production. Assistance is also offered during initial system design phases in the definition and resolution of filter requirements.

active filters FROM Frequency Devices INC.

FIXED FREQUENCY ACTIVE FILTERS—SERIES 700

High performance Active Filters offer Bessel, Butterworth, and Tchebyscheff transfer functions in 2-, 4-, 6-, and 8-pole designs. Low pass, high pass, bandpass, and band reject models available.

Wide Frequency Range: .001Hz to 20KHz.

Low Drift: $\Delta f_c < 0.05\%/°C$; Offset Drift: $30\mu V/°C$.

Z_{in} to 1MΩ; $Z_{out} = 1\Omega$; Insertion Loss = .02dB; Noise = 50μVrms.

RESISTIVE TUNEABLE ACTIVE FILTERS—SERIES 730, 740, 760, 780

730 & 740 Series Lowpass: Four and six pole filters with externally tuneable cutoff frequency. Various models are tuneable over 20:1, 50:1, 200:1 or 500:1 frequency ranges via external tuning resistors. Bessel and Butterworth responses in the frequency range from .001Hz to 50KHz. 780 Series Bandpass/Band Reject: Provides adjustable Q of 0.5 to > 100 with 1000:1 tuning. 50 to 60dB notch is trimmable to 60 to 80dB.

760 Series Bandpass: Two pole-pair Butterworth characteristics with Q of 5 or 10 and 1000:1 tuning. Various models cover the range 0.05 to 20KHz.

APPLICATIONS

- A to D Pre-Filtering
- Geophysical and Meteorological Data Reduction
- Noise Reduction
- Contiguous Comb Filter
- Demodulation Filter
- Phase Lock Control
- Vibration Analysis
- Voltage to Frequency Conversion
- Time Delay Filters
- Test Instrumentation
- RMS Measurements
- Harmonic Analysis
- Noise Reduction
- Waveform Purifier

VOLTAGE TUNEABLE ACTIVE FILTERS—SERIES 300

Versatile two-pole active filters are tuneable over a 20:1 frequency range by application of a control voltage. Simultaneous low, high, and bandpass outputs are provided. Operational without external components, but gain or Q may be varied with a single resistor.

Linear tuning (1%), $Z_{in} = 100K\Omega$; $Z_{out} = 10\Omega$; Insertion Low = 0.2dB.

UNIVERSAL VOLTAGE TUNEABLE NOW AVAILABLE: MODEL 320

- Spectrum Analysis
- Adaptive/Tracking Filter
- Frequency/Phase Locked Loops
- Automatic Test Instrumentation
- Sinewave VCO with Quadrature Outputs
- Bandwidth Control

PROGRAMMABLE FILTERS—744 SERIES & FC103

Butterworth and Bessel Lowpass Filters have BCD and Binary programmable corner frequencies. 500:1 and 1000:1 tuning with 80dB floors and 100dB dynamic range. Five models cover the frequency range from 0.1 to 50KHz. FC102: The almost instrument filter card. User need only interface signal & power. Corner frequency is selected via pencil point switches. Excellent choice for breadboard and laboratory applications.

FC103/104: Universal Remote Programming Card System allows TTL control of filters and oscillators.

- Programmable Test Equipment
- Anti-Aliasing
- Programmable Time Delay
- Computer Controlled Signal Processing
- Automated Measurements
- Tracking Sampled Data Systems

MODEM FILTERS—530 SERIES

Low cost/high performance modem filters for FSK modems. Switchable bandpass filters for transmitting and receiving applications where switching from 1 carrier frequency to another is desirable.

- Telephone Test Equip.
- Data Transmission

WEIGHTING FILTERS—580 SERIES

Ideal for telephone communications and test equipment. Includes "C Message" "Notch", "A Message" and other weighting functions.

PRECISION SINEWAVE OSCILLATORS, TONE DECODERS & ENCODERS ALSO AVAILABLE

FAST DELIVERY— 2 weeks on tuneable filters / 2-4 weeks on fixed frequency filters

Frequency Devices, Inc., 25 Locust St., Haverhill, MA 01830/ (617) 374-0761/ TWX 710-347-0314

FROM

Frequency Devices INC.

TONE ENCODERS FOR DUAL-TONE MULTIFREQUENCY (DTMF) APPLICATIONS

Model 510, 511, 520 Encoders

Model 510 Touch Tone* Encoder is a complete T^2L Compatible Dual Touch Tone* Encoder in a 2.4 cu. in. low profile (.4″) module. It features self contained decode logic to select the frequencies of its two low distortion oscillators and output gating logic to gate either or both of the oscillators outputs.

Specifications include: Low distortion outputs (< 1%) — Touch Tone* frequencies (±1%) (Osc. 1 — 697Hz, 770Hz, 852Hz, 941Hz: Osc. 2 — 1209Hz, 1334Hz, 1446Hz, 1633Hz). Gating isolation > 60dB — Low impedance output (10Ω).

Other models with Trunk Tone frequencies or customer specified frequencies are also available.

Tone decoder modules featuring two pole pair bandpass filters and level detection circuitry with T^2L compatible logic outputs are available.

Model 511 Tone Encoder, a complete TTL Compatible Dual Tone Encoder offering a signal amplitude of high tones 3dB greater than that of low tones.

Model 520 Tone Encoder, a complete, low-cost TTL compatible tone encoder for use with external switching and touch pads.

TONE DECODERS FOR DUAL-TONE MULTIFREQUENCY (DTMF) APPLICATIONS

Model 550-1 (Low Frequency) & Model 550-2 (High Frequency) Tone Detector Modules

The Model 550-1 and 550-2 Tone Detector modules are a complete, easy to use, adjustment free, high performance tone decoding system. They detect and decode standard Bell System Touch Tone* with relative amplitudes of ±10dB and absolute amplitude in the range from —30dBm to 0dBm. Detection and hold times have been designed to achieve non-ambiguous decoding of 40 ms on and 40 ms off tone bursts. Outputs may be interfaced with CMOS and T^2L logic.

Model 540 Band Separation Filter

The Model #540 Band Separation Filter attenuates the dial tone frequencies (by > 30dB) and the out of band portions of the voice spectrum. It also separates the high and low tone bands.

SINEWAVE OSCILLATORS LOW COST—HIGH PERFORMANCE—LOW DISTORTION

Fixed Frequency Models 400 — Tuneable Models 440

Modular fixed frequency and tuneable oscillators featuring low distortion quadrature (90° ±.1°) buffered outputs with amplitude tracking to better than 100 ppm/°C. Fixed frequency models available from 1Hz to 20KHz (externally adjustable ±10%) and Tuneable models externally variable over 1000:1 range.

Low frequency drift (0.01%/°C) — Low Noise (−85dB). Amplitude externally adjustable over 20dB range (with resistor or voltage).

An amplitude control module to maintain 100 ppm amplitude accuracy and stability is also available.

Model 450

The 450 Series features 0.1dB amplitude stability, 0.1% distortion, 1 to 20V p-p adjustable, 100Hz to 10KHz range, 1% accuracy (adj. ±5%) and .02%/°C stability.

APPLICATIONS

- CONSUMER CREDIT
- TRAVEL & ENTERTAINMENT
- MANUFACTURING FACILITIES
- TRANSPORTATION SYSTEMS
- FACSIMILE TRANSMISSION
- DATA COLLECTION
- UTILITY CONTROL

Frequency Devices INC.

FREQUENCY DEVICES INC. ALSO CARRIES A BROAD LINE OF ACTIVE FIXED FREQUENCY, TUNEABLE AND PROGRAMMABLE FILTERS.

EMI FILTER
CAPITAL OF THE WORLD

**FROM CERAMIC POWDER TO MIL-APPROVED TEST LAB...
ERIE HAS IT ALL, UNDER ONE ROOF**

Only one company can deliver your total EMI Ceramic Filter needs . . . ERIE. We've been applying sophisticated ceramic and related technologies to developing superior filters for 35 years. Today ERIE has, by far, the broadest line of subminiature EMI Filters in the world. From tiny high frequency filters to broad band filters to custom filter assemblies, ERIE offers the ultimate in quality. And you get single-source responsibility too, for we build the complete filter in a plant devoted exclusively to the design and manufacture of EMI Filters. So come to ERIE for your filter needs. We'll put a team to work on your particular application. Aerospace. Communications. Avionics. Industrial Equipment. Whatever the market, we can help eliminate electromagnetic "noise" and emissions. In the meantime, write for our complete catalog . . . EMI Filters or call 613/392-2581.

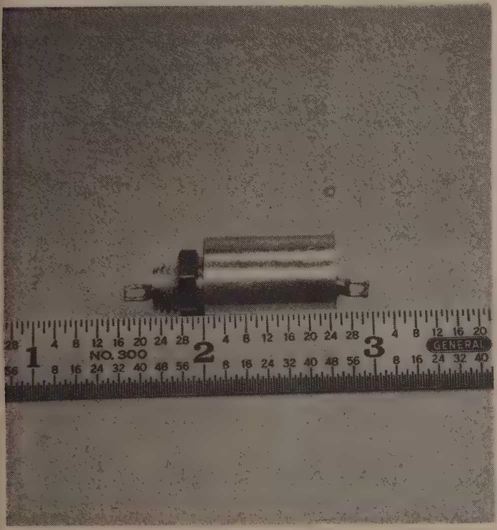
EMI and RFI FILTERS polycarbonate dielectric L type miniature filters



polycarbonate dielectric versus ceramic is ultimately superior for A/C applications

The **Gudeman Corporation** manufactures a full line of military and commercial EMI and RFI filters to meet the needs of most custom requirements.

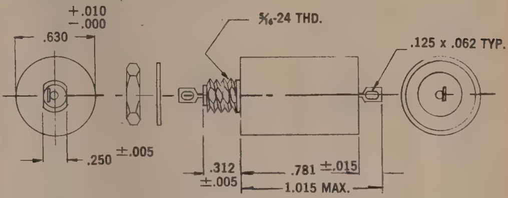
Military types are designed to meet or exceed the applicable requirements of MIL-F-15733E. Commercial types to Underwriters Laboratories requirements or the customers individual specifications.

In addition to the popular tubular and bathtub style case configurations, the **Gudeman Corporation** offers case styles and mounting means custom designed to take full advantage of the volume and form factor available for that "special application."

ENGINEERING SERVICES
Please feel free to consult our application engineering department without obligation, for assistance on any problem relating to the design, use or application of low pass filters.

TESTING SERVICES
The **Gudeman Corporation** has complete facilities for testing equipment for radiated or conducted EMI to FCC regulations, at a very low cost.

polycarbonate dielectric L type miniature filter



specifications 64L6- /64RL6-* series

115 VAC 0-400 Hz, 250 VDC
500 VDC Dielectric Withstanding Voltage
1000 Megohm Minimum @ 250 VDC Insulation Resistance
−55°C to +105°C Operating Temperature
Meets or exceeds all applicable requirements of MIL-F-15733
*R in part number denotes capacitor at threaded end.

specifications

TEST VOLTAGE
Shall withstand a DC voltage equal to twice rated DC voltage or a 60 cycle AC voltage equal to twice the recommended AC voltage rating for two minutes maximum when applied between case and either terminal.

LIFE TEST
Shall withstand an accelerated life test for 250 hours with an applied DC voltage as follows:
At 85°C 271 Type 140% Rated DC voltage.
At 125°C 272 Type 140% Rated DC voltage for filters of .05 watt-second or less, 120% for greater than .05 watt-second.
One failure in 12 permitted.

POWER FACTOR
The power factor shall not be more than 1% when measured at or referred to a frequency of 1,000 cycles at 25°C.

INSULATION RESISTANCE
The insulation resistance when measured at a potential of 100 Volts DC and an electrification time of two minutes shall be as follows:
At 25°C 20,000 megohm-mfd. or 30,000 megohms, whichever is less.
At 85°C 100 megohm-mfd. or 1,000 megohms, whichever is less.
At 125°C 10 megohms-mfd. or 100 megohms, whichever is less.

ENVIRONMENTAL REQUIREMENTS
Designed to meet the applicable environmental requirements of specification MIL-C-25A for characteristics E (Type 271) and K (Type 272).

TYPE DESIGNATION
271 E 104 NF T
T — **TERMINAL STYLE** (Absence of Letter T designates wire Terminal)
NF — **THREADED NECK WITH STRADDLE MILLED FLATS**
104 — **CAPACITANCE**
E — **VOLTAGE**
271 — **COMPONENT AND TEMPERATURE RANGE**

COMPONENT AND TEMPERATURE RANGE
The Gudeman Feed-Thru Filter is designed as a three-terminal component. Types 271 and 272 are paper dielectric filters impregnated with Gudeman impregnant #257 which are designed to operate within the temperature range as follows:
Type 271 −55°C to +°85C
Type 272 −55°C to +125°C

VOLTAGE TABLE

DC Working Voltage	Symbol
100	B
200	C
300	Z
400	E
600	F

AC VOLTAGE RATING
The Gudeman 272 Type may be operated up to 85°C as follows:
The 300 VDC units may be used at 150 Volts AC from 60 to 400 cycles.
The 600 Volt units may be used at 300 Volts AC from 60 to 400 cycles.

CAPACITANCE
The nominal capacitance value in micro-micro-farads is expressed by a three-digit number in the type designation. The first two digits are the first two digits of the capacitance value. The last digit designates the number of zeros which follows the first two digits.

CURRENT RATING
The 271 and 272 Feed-Thru Filters are designed for a maximum permissible current rating of 5 amperes DC or equivalent.

CAPACITANCE TOLERANCE
The 271 and 272 Types are available in a standard capacitance tolerance of ±20%.

SPECIAL CAPACITANCE VALUES
Non-Standard Capacitance Values are available upon special request.

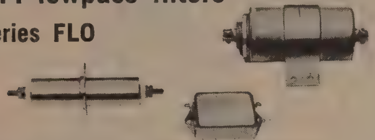
RFI lowpass filters

series FLO



RADIO INTERFERENCE FILTERS

The FLO (filter, lowpass) series is a select group of most commonly used filter types. The Gudeman Company has tabulated this series in order that the engineer can pick a standard "off the shelf" item for quick delivery. The tabulated insertion loss represent minimum performance when measured in a 50 ohm system in accordance with Military Standard MIL-STD-220.

HERTZ FILTERS

BAND PASS FILTERS CUSTOM DESIGNED TO FILL YOUR NEEDS

Hertz Filter Corporations' engineering department is made up entirely of specialists in the field of custom design of band pass filters. They are all fully experienced and prepared to help you solve your filter problems. Call or write Hertz for reliable service and prompt delivery.

FEATURES

1. Filters, Band Pass, Passive
2. Center Frequencies — 50 Hz to 50 Meg Hz
3. Shape factors — better than 2.0 for ratios of 60 db to 3 db
4. Bandwidth to center frequency ratio — up to 10%
5. Phase linearity — within 10° through passband
6. Low passband insertion loss
7. Better than 80 db attenuation 50% above and below center frequency
8. Input and output impedances as required
9. Low input and output impedances in stop band
10. Low passband ripple
11. L, C, and R elements only

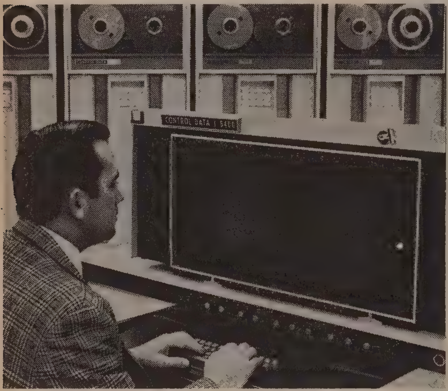
CUSTOM FILTERS

Low, band or high pass and band stop filters with optimum amplitude and/or delay characteristics can be supplied to your special requirements and MIL-F-18327 Construction utilizes precision inductors and high quality capacitors of special films or silvered mica, according to frequency and space requirements. Operating frequencies range to 100 MHZ. Temperature stabilization for both amplitude and frequency can be effected. Mechanical styles may be epoxy encapsulated or hermetically sealed metal in sizes from 0.2 to 200 cu. in.



To keep pace with the most sophisticated technologies of network design, Hisonic engineers have direct in-plant access to the tremendous capabilities of large late-generation computers. The Hisonic staff includes specialists with up to 25 years experience in precision inductor and filter network design. It also includes advanced mathematicians with backgrounds of program development, who are able to achieve design excellence not otherwise attainable.

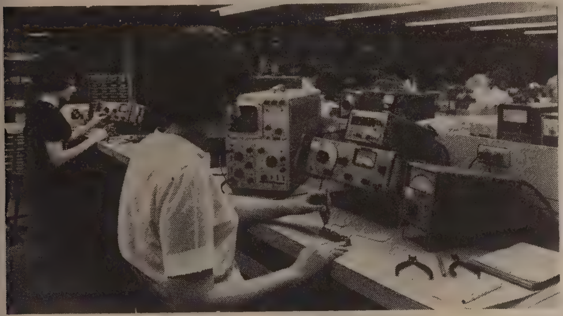
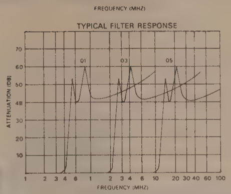
STANDARD FILTERS

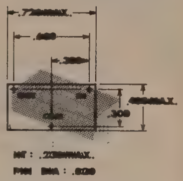
FOR HIGHEST SELECTIVITY

Standard filters are computer designed by modern network methods for minimum stop to pass band ratios. Applications are those requiring optimum utilization of frequency spectrum.



Technicians adjust critical response of special band pass filters utilizing adjustable ferrite core inductors. Modern precision test equipment is employed in association with MIL I 45208 Quality Control procedures.





MINIATURE SERIES 540 LOW PASS

ELECTRICAL SPECIFICATIONS

- IMPEDANCE: 100 ohms standard.
- INSERTION LOSS: 5db max. at .1Fc.
- RESPONSE:
  3DB max. at Fc
  40DB min. at 1.5 Fc
- SIGNAL LEVEL: Max. power in mw = 10
- OTHER IMPEDANCES AND FREQUENCIES: Write for data sheet.
- TEMPERATURE RANGE: −55 to +105°C
- STANDARD CUTOFF FREQUENCIES:

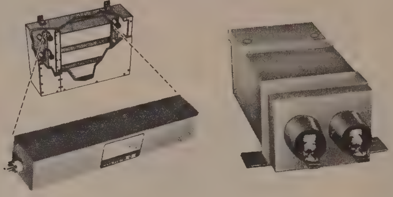
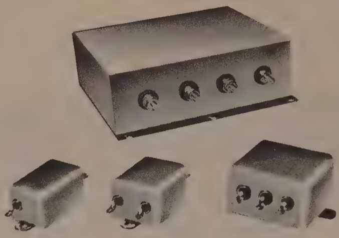
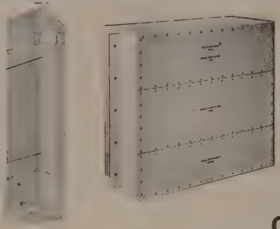
HEAVY DUTY POWER-LINE FILTERS



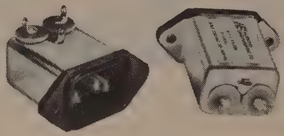
DATA PROCESSING FILTERS



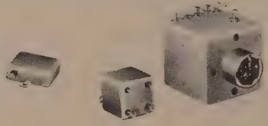
COMMUNICATION FILTERS



UNIVERSAL RFI/EMI FILTERS



CUSTOM FILTERS



FACILITIES CAPABILITY

Hopkins Engineering Company is a leading manufacturer of RFI/EMI filters. It was founded in 1945 and offers engineering design and manufacturing expertise in solving electromagnetic interference problems.

MANUFACTURING

A wide variety of filter designs are manufactured in our modern fully equipped 30,000 square foot factory. Quality is built into every Hopkins filter by skilled production personnel and an efficient prototype department offers prompt delivery of new designs. Hopkins has manufactured products to the most exacting military programs for over 25 years.

ENGINEERING

Hopkins' engineers have developed thousands of filter designs to meet a variety of military and industrial RFI/EMI suppression requirements. This versatility coupled with the latest filter design techniques and use of computer assisted design programs allows our engineers to develop filters of optimized circuitry, performance, reliability, and cost.

QUALITY ASSURANCE

A policy of rigid quality control practices are employed. Quality materials and high workmanship standards insures a product that meets or exceeds specification requirements. Our quality assurance department maintains established procedures to control the quality and reliability objectives of the customer and Hopkins Engineering Company.

HOPKINS ENGINEERING CO.

12900 Foothill Blvd., San Fernando, California 91342 • Phone: (213) 361-8691 • TWX: 910-496-1531

HEAVY DUTY POWER LINE FILTERS

Tailored for heavy duty, high current and attenuation applications, Hopkins Engineering power line filters offer optimum long term dependable performance. Available with current ratings over 200 amperes and 100 db attenuation, these filters are available for military, industrial, institutional solid room and secure communication applications. They can be provided with shock hazard discharge devices in single and multi-filter shielded cabinets.

COMMUNICATION FILTERS

The communication filters provide optimum long term dependable performance in secure communications and noisy "real world" installations such as telephone, teletype, carrier current, and data phone computer line equipment or systems. Many of these filters are readily available to the customer.

CUSTOM FILTERS

As a recognized leader in the design and production of special custom filters, Hopkins has supplied many unique filtered designs. They meet a variety of sophisticated, complex, and multi-circuit applications associated with high reliability military/aerospace equipment in addition to electronic instrumentation and industrial control systems.

DATA PROCESSING FILTERS

Hopkins offers many different filters expressly designed for the suppression of RFI/EMI interference detrimental to data processing equipment. A selection of UL recognized filters are available in many current ratings and insertion loss characteristics. The data processing filters are designed to meet UL, VDE, and CSA specifications.

UNIVERSAL RFI/EMI FILTER

The universal 3-6 amp RFI/EMI power line filter provides a high degree of noise suppression in a compact assembly incorporating an IEC (International Electromechanical Commission) power line connector. It is designed to meet the filtering needs in a wide variety of applications at a low cost. Some examples include industrial controls, electronic instrumentation, data processing, and medical health care systems. Many other applications are possible where UL, VDE, and CSA requirements are imposed.

ENGINEERING CATALOGUE AVAILABLE UPON REQUEST

EMI/EMC ENGINEERING SERVICES

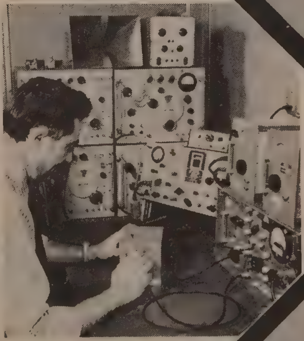
Hopkins maintains a complete electromagnetic engineering service for the evaluation and qualification of systems, sub-systems, and FCC certification programs. The engineering staff is available to write control plans, test plans, and consult in the design of equipment to assure compliance to EMI/EMC specifications.

LABORATORY FACILITIES

Hopkins EMI shielded laboratory test facilities are equipped with the latest instrumentation to diagnose, redesign and qualify equipment over the frequency range of 30Hz to 10GHz. Tests are conducted routinely to MIL-STD-461A, VDE, and CSA specifications.

FIELD SERVICES

Hopkins' engineers and equipment are available to perform tests of evaluation and validation at the customer's location. Engineering consultation may be provided that is prior or separate from the testing services.



ITHACO

Variable electronic filters

STANDARD FEATURES

- Frequency Response – Butterworth and Bessel
- Insertion Loss – 1%
- Frequency Accuracy – ±1%
- Phase Accuracy – ±2°
- Output Level – 20V p–p
- Noise – Less than 50μV
- Input Impedance – 20MΩ
- Output Impedance – 50Ω

OPTIONS

- Battery Operation
- Remote Preamplifiers
- Filter Gain

MODIFICATIONS

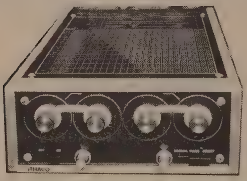
- Special Frequency Ranges
- Special Frequency Steps
- Special Frequency Responses

SERIES 4110
Multi channel electronic filters

4 and 7 Channel Mounting Cases

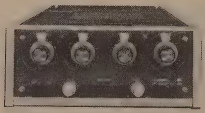
- Filter Functions – High-Pass, Low-Pass, Band Pass
- Frequency Range – .01 Hz – 1 MHz
- Frequency Steps – 1/10 Decade (1/3 Octave)

SERIES 4210
Laboratory filters



- Filter Functions – High-Pass, Low-Pass, Band Pass, Band Reject
- Frequency Range – .01 Hz – 1 MHz
- Frequency Steps – 1/10 Decade (1/3 Octave)
- Filter information for all settings are printed on top of the instrument

SERIES 4251
Laboratory filters



- Filter Functions – High-Pass, Low-Pass
- Frequency Range – .01 Hz – 111 kHz
- Frequency Resolution – 3 Digit
- Normalized Frequency, phase and pulse response curves are printed on top of the instrument

ITHACO also manufactures a complete line of AC amplifiers, preamplifiers and custom engineered instruments and systems. See Section 1100. For lock–in amplifiers, see Section 2900.

A Division of Pemcor, Inc.

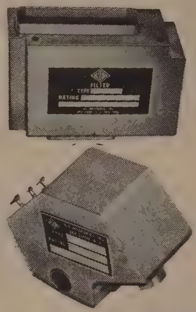
...the nation's leading filter supplier offers a complete range of RFI/EMC filters...

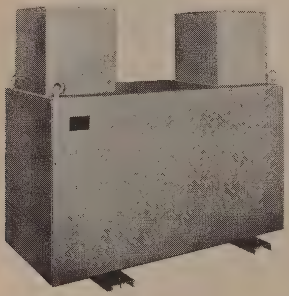
RFI offers the most complete range of products in the industry. Sophisticated, complex, multi-circuit filter assemblies, or simple feedthru capacitors—we make them all.

These are just a few of the more than 10,000 different filter designs by RF INTERONICS for specific customer requirements. For detailed information concerning standard and custom-engineered parts contact our sales department.

Multi-circuit filter packages

Designed to provide the equipment manufacturer with the most economical package from the standpoint of size, weight, and cost. Packages can include the input power connector and considerably simplify equipment construction and wiring.



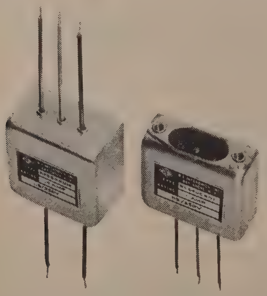


High Power Filter Units

Current and voltage ratings up to 2000 amperes and 20,000 volts. Designed to provide the performance required by high powered ground installations, such as computer facilities, shielded test laboratories, radar installations and similar, high performance applications.

Cylindrical filters to Mil-F-15733E

RF Interonics has more QPL listed parts than any other supplier in the industry — Now qualified on more than 150 different filters, including subminiature "MICRO-FILTER®" units corresponding to military styles FL10, 11, 12, 13 14 and 15, and standard cylindrical types, covered by requirements for styles FL22, 24, 81, 82, 83 and 84 of the military specification.

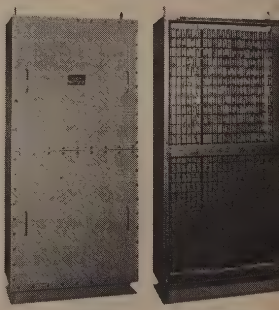


UL Listed Parts

RFI's line of filters includes parts recognized under the components listing program of Underwriters' Laboratories, Inc. These filters are designed for use in Data Processing Equipment, and similar applications.

Communications and Signal Line Filters

RF Interonics manufactures a wide range of filters with various pass band and impedance characteristics, suitable for use in communication, signal or telephone line applications. Filters are available as single or dual circuit units, or in multi-circuit shielded cabinets.



RF INTERONICS

100-E Pine Aire Drive, Bay Shore, Long Island, New York 11706 / (516) 231-6400 / TWX 510-227-6233

Here are only a few
of the more than 10,000
different filter designs
by RF INTERONICS for
specific customer requirements.

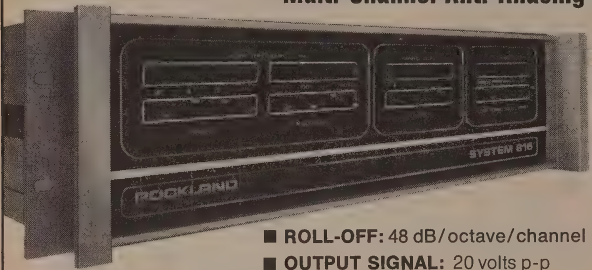
for the BE$T in...
ANALOG FILTERS

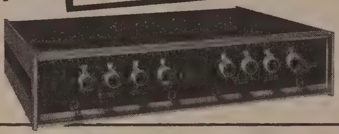
- **HI** PERFORMANCE/ **LO** COST
- **WIDE RANGE**—CUT-OFF FREQUENCIES FROM 0.001 Hz to 1.1 MHz
- **DIGITAL TUNING**—INSTANT RESETTABILITY
- **FLEXIBILITY:** **Modes:** Low pass, high pass, band pass, band reject, notch.
  Roll-Offs: 24, 48, & 96 dB/octave
  Responses: Butterworth, Bessel, Linear Phase, RC
  Passband Gains: 0, 20 dB
- **REMOTE PROGRAMMABILITY**—*A ROCKLAND EXCLUSIVE!*

Multi-Channel Anti-Aliasing Filter: System 816



- **ROLL-OFF:** 48 dB/octave/channel
- **OUTPUT SIGNAL:** 20 volts p-p
- **PASSBAND GAIN:** 0 dB
- **IMPEDANCES:** 1 Meg input, 50 ohm output
- **DYNAMIC RANGE:** 80 dB
- **FOR AUTOMATED DATA ACQUISITION AND SIGNAL ANALYSIS SYSTEMS**
- **DIRECT INTERFACE WITH COMPUTER, PROGRAMMER OR SWITCH CLOSURES**
- **PLUG-IN CARDS PROVIDE UP TO 16 INDEPENDENT FILTER CHANNELS IN 5¼″ HIGH PANEL**
- **LOCAL, REMOTE, AND ON-CARD PROGRAMMING OF CUTOFF FREQUENCY**
- **CUTOFF FREQUENCY RANGE:** 01 Hz to 150 KHz
- **FUNCTIONS:** Low pass, high pass, bandpass, band reject
- **RESPONSES:** Butterworth and Bessel

New! Higher Performance, Lower Cost!

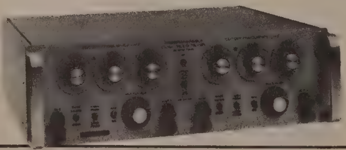


DUAL HI/LO: Models 452 and 852

Frequency Range: 0.01 Hz to 111 KHz
Roll-Off: 24 dB/octave/channel (452) 48 dB/octave/channel (852)
(Cascading channels doubles roll-off)
Responses: Butterworth, Linear Phase
Passband Gains: Selectable 0, 20 dB.

VARIABLE ANALOG: Models 1100 and 1200

Frequency Range: 10 Hz to 1.1 MHz **Roll-Off:** 24 dB /octave
Responses: Butterworth and Bessel **Passband Gain:** 0 dB.



PROGRAMMABLE DUAL HI/LO: Series 1500

Frequency Range: 0.001 Hz to 111 KHz
Roll-Off: 24 dB/octave/channel (Cascading channels doubles roll-off)
Passband Gain: 0, 20 dB. **Responses:** Butterworth, RC.
Programming: Local and/or Remote of all Functions
Programming options: 02; 1-2-4-8 BCD positive logic,
03; 1-2-2-4 BCD positive logic.

STERLING TRANSFORMER CORP.

SPECTRUM CONTROL INC.

SPECTRUM CONTROL . . . The company was founded upon the basic philosophy of encompassing literally the spectrum of services in the EMI/EMC technology . . . services offered within reasonable cost structures.

Today, Spectrum Control facilities must rate among the most efficient in the industry. Advanced test equipment, shielded test rooms and a fully experienced engineering staff combined with a broad range of electronic components qualifies Spectrum as a unique source for total program management of electromagnetic interference.

Your EMI/EMC problem in electronic or electromechanical equipment can be assumed in total by Spectrum engineers . . . including testing, planning and control, from the initial stages to final resolution of the problem. At the outset an EMC control plan is formulated. This involves in-depth analysis of engineering drawings, circuitry, specifications and the equipment. Next, Spectrum provides consulting service to assist compliance with the control plan. EMI testing to the latest applicable specifications are conducted at your plant site by a team of experienced Spectrum engineers; or, if more convenient, specific equipment and apparatus can be brought directly to our test facilities.

As the problem is pinpointed, Spectrum Control has the total facilities to affect satisfactory, economical solution. Corrective action may involve circuit changes, packaging changes . . . or require EMI Filters, gaskets, metal shields or other types of hardware. Whatever is required, Spectrum Control is equipped with qualified personnel, plant facilities and a broad range of reasonably priced components to help resolve your EMI/EMC problems.

INDUSTRIAL CONSUMER APPLICATIONS

A rapidly increasing number of industrial and consumer products, equipment and systems are potential sources of electromagnetic interference. Spectrum Control specializes in air navigation and avionics, microwave ovens, control circuits, power supplies, electrical instruments, electric motor noise suppression . . . just about any application where EMI impairs optimum performance.

MILITARY APPLICATIONS

Today's powerful communications systems, radar systems and other high performance systems demand the ultimate in electromagnetic compatibility. Spectrum Control offers one of the best equipped, independent test facilities in the United States. Spectrum is capable of performing to the following applicable specifications:

MIL-STD-461/462
MIL-STD-826
MIL-I-6181
MIL-I-26600
MIL-I-16910
FCC-Part 15
FCC-Part 18

EMC Planning, Control and Testing . . . a total approach to electromagnetic compatibility!

SPECTRUM ACQUIRES ALLEN BRADLEY LINE

In May of 1973, Spectrum Control, Inc. and Allen Bradley Company entered into a long term agreement whereby Spectrum Control acquired all patents, technology and machinery to manufacture the Allen Bradley line of filters and capacitors. These devices can be ordered by the Allen Bradley part number or by the Spectrum Control inventory code number.

SPECTRUM ACQUIRES ALLEN BRADLEY LINE

In May of 1973, Spectrum Control, Inc. and Allen Bradley Company entered into a long term agreement whereby Spectrum Control acquired all patents, technology and machinery to manufacture the Allen Bradley line of filters and capacitors. These devices can be ordered by the Allen Bradley part number or by the Spectrum Control inventory code number.

EMI/RFI SUPPRESSION FILTERS

Listed below are the decodings from Mil-F-15733 to Spectrum part number. These filters can be ordered by the Spectrum or Mil number. A copy of this Mil specification and the slash sheets are available through normal channels at Naval Publications, 5801 Tabor Avenue, Philadelphia, Pennsylvania 19120. Spectrum Control is QPL'd on all dash numbers under slash sheets shown and will become qualified under all new slash sheets.

SPRAGUE
HYPASS
SPRAGUE
HYPASS

- Exclusive Sprague 3-terminal Network Feed-thru Capacitors
- Bypass V-H-F Currents Where Ordinary Capacitors are Ineffective
- Suppress TVI from Short-wave Transmitters, Diathermy Machines, Electronic Heating Apparatus, etc.
- Eliminate Line-conducted Interference from Neighboring TV Sets
- Install Leads in Series with Circuit Being Filtered and Ground the Case

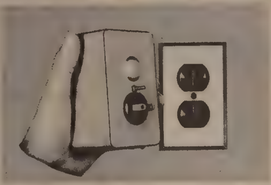
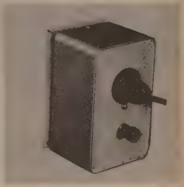
TYPE F-400

MIRACLE FILTEROL®





A LINE FILTER THAT REALLY WORKS

- Effectively Suppresses Radio Interference by Filtering Power Lines of Receivers and Appliances
- Maximum Noise Eliminating Efficiency because of Practically Zero Length of Ground Lead
- Plugs into Standard Duplex Wall Outlet — Captive Screw Fastens Filterol F-400 to Outlet for Safe, Secure Mounting
- Direct Wall-Mounting Provides Neat Installation — No Unsightly Cord — Receiver or Appliance Plugs into Standard Outlet on Face of F-400
- Will Also Operate at Slightly Reduced Efficiency in Older Homes where Wiring is of Knob and Tube or 2-Conductor Non-Metallic Sheathed Cable Type by Using the External Grounding Post Provided for this Purpose
- Handsomely Finished in Tan Hammerloid Baked Enamel
- Rated at 5 Amperes, 125 Volts AC or DC

TYPE IF FILTERS

IF-15
IF-11
IF-21
IF-S1
IF-37

IF-15—TRIPLE-SECTION FILTER for small motor-operated devices such as fans, drills, etc. designed to prevent shocks from discharge of filter capacitors.

IF-11—DUAL HIGH-CAPACITY FILTER designed for use on motors over 1 hp up to 220 volts ac-dc. Also used on high-current arcing devices.

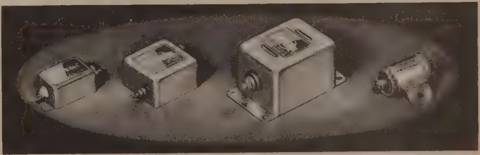
IF-21—COMPACT DUAL FILTER for use on fractional horsepower motors with case grounded to motor frame. Also used across line terminals of motors.

IF-S1—SINGLE SECTION 2-LEAD FILTER for use across make-and-break contacts, such as thermostats, circuit breakers, etc.

IF-37—3-SECTION DELTA-CONNECTED FILTER especially designed for fluorescent fixtures and governor-type motors. Underwriters' Labs., Inc. listed.

Cat. No.	Volts AC or DC	Dia. x Length
IF-15	220	1 x 2 3/16
IF-11	220	1 3/8 x 5 1/4
IF-21	220	1 x 2 3/16
IF-S1	220	3/4 x 2 1/16
IF-37	220	1 x 2"

FILTEROL® FILTERS



Filterol Types 1, 2, and 3— Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4— A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

Cat. No.	Amps.	Volts AC or DC	Size
Filterol 1	1	115	7/8 x 1 1/4 x 1 3/4
Filterol 2	10	115	1 1/8 x 2 x 2
Filterol 3	35	115	1 7/8 x 2 7/8 x 3 1/8
Filterol 4	20	115	1" dia. x 1 13/16" long

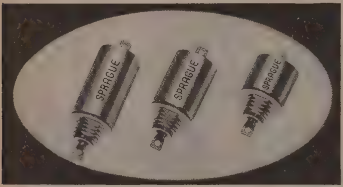
SPRAGUE FILTERS



SUBMINIATURE EMI FILTERS

- The broadest line of subminiature interference control components available.
- Small size and high performance make them well suited for high-density packaging in a wide variety of applications, including power and control lines.
- Hermetically sealed with glass-to-metal seals in corrosion resistant metal cases.
- Low terminal-to-terminal d-c resistance. Especially desirable in low-voltage circuitry where any reduction in power supply voltage is critical.
- Threaded-neck construction is ideal where leads being filtered pass through chassis or bulkhead.
- For complete technical data, refer to Sprague Engineering Bulletins 8132 and 8132.1.

RADIO INTERFERENCE FILTERS

FOR AIRCRAFT APPLICATIONS

- Exact replacements for filters needed to control radio interference caused by noise-producing devices in aircraft as well as ground equipment.
- Constructed to meet the high quality standards demanded by the aircraft industry.
- Hermetically-sealed terminals. Corrosion-resistant metal cases.

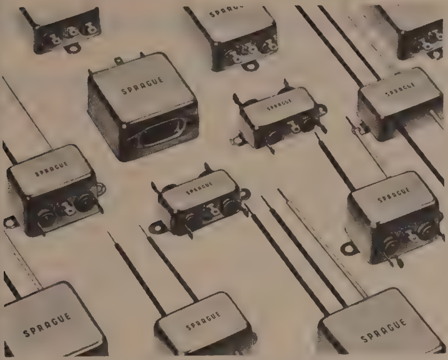
SPRAGUE CAPACITORS

SERIES JX5100 GENERAL PURPOSE INTERFERENCE FILTERS



- Designed for wide variety of applications . . . particularly useful in desk top computers, office machines, medical electronics, industrial controls, other high quality instruments.
- U.L. recognized for operation at 125 or 250 volts a-c.
- Ideal for eliminating broadcast band and high-frequency interference. Also useful into the VHF range and in microwave oven applications.
- May be used at any combination of voltage and frequency up to and including the max. of 250 volts a-c, 60 Hz, at full rated current.
- Max. leakage current is 0.5mA at 125V, 60 Hz and 1.0mA at 250V, 60 Hz.
- Will withstand a 2100 volt d-c dielectric strength test.
- Style AA and AB filters furnished with combination terminals which accept so-called "quick-connect" connectors and may also be used as soldering lugs.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 8210.11.

THESE PAGES CATALOG OVER 1,000,000 STANDARD FILTER TYPES — SPECIFY ANY COMBINATION OF FREQUENCY, SOURCE AND LOAD OHMS WITHIN THE MIN-MAX RANGES

These pages give complete electrical and mechanical information for ordering standard filters.

BANDPASS FILTERS FOR ANY CENTER FREQUENCY FROM 30Hz TO 100MHz (Specials from 10Hz upward)

Series	F_c Center Freq. Range Min.	Max.	Bandwidth @ −3db	Stopband Attenuation	Source, Ohms Min.	Max.	Load, Ohms Min.	Max.	Case No.
K10	500Hz	9.9KHz	±1%F_c	30db at .92F_c & 1.1F_c & 40db at .86F_c & 1.2F_c	1K	500K	1K	500K	4
K10A	10KHz	100MHz	±1%F_c		50	10K	50	10K	3 or 11
K11B	500Hz	9.9KHz	±1%F_c	30db at .94F_c & 1.06F_c & 40db at .93F_c & 1.1F_c	1K	500K	1K	500K	4
K11D	10KHz	100MHz	±1%F_c		50	10K	50	10K	3 or 12
K12A	500Hz	9.9KHz	±2%F_c	30db at .92F_c & 1.1F_c	1K	10K	1K	10K	4
K12C	10KHz	100MHz	±2%F_c	30db at .92F_c & 1.1F_c	50	10K	50	10K	3 or 12
K13	30Hz	99Hz	±5%F_c	60db at .5F_c & 2F_c	1K	500K	1K	500K	5
K14A	100Hz	100KHz	±5%F_c	40db at .5F_c & 2F_c	500	10K	100	1 Meg	3
K14B	300Hz	999Hz	±5%F_c	35db at .5F_c & 2F_c	700	15K	700	15K	11

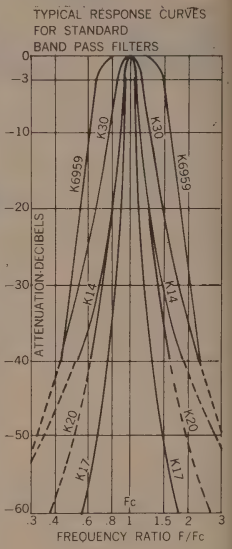
K17A	300Hz	999Hz	±5%F_c	50db at .5F_c & 2F_c	500	15K	500	30K	12
K17B	1KHz	99KHz	±5%F_c	50db at .5F_c & 2F_c	100	50K	100	100K	11
K17C	100KHz	100MHz	±5%F_c	60db at .5F_c & 2F_c	50	300	50	300	11
K18	10KHz	100KHz	±5%F_c	60db at .5F_c & 2F_c	100	100K	100	500K	3
K20	100Hz	3.9KHz	±7.5%F_c	40db at .57F_c & 1.75F_c	500	10K	500	10K	4
K20C	250Hz	99KHz	±7.5%F_c	35db at .5F_c & 2F_c	1K	10K	1K	10K	11
K20D	100KHz	100MHz	±7.5%F_c	40db at .67F_c & 1.5F_c	50	300	50	300	11
K21B	1KHz	100KHz	±7.5%F_c	40db at .6F_c & 1.67F_c	500	10K	500	10K	3
K30	100Hz	3.9KHz	±15%F_c	40db at .4F_c & 2.5F_c	500	10K	500	10K	4
K30C	150Hz	99KHz	±15%F_c	25db at .45F_c & 2.2F_c	1K	10K	1K	10K	11
K30D	100KHz	100MHz	±15%F_c	40db at .5F_c & 2F_c	50	300	50	300	11
K31B	1KHz	100KHz	±15%F_c	40db at .45F_c & 2.2F_c	500	10K	500	10K	3



The bandwidth for any of the above filters can be increased or decreased to specification.

WIDE BAND FILTERS: Bandwidths of ±16% or greater can be obtained by ordering TTE standard High pass and Low pass filter sections as a composite network. Select numbers from the Series H and J listings on the next page which give the desired attenuation slopes and combine these numbers. For example to obtain a slope of 40db at 0.65 of the lower freq. cut-off, F_{c1}, (High pass section) and 40db at 1.6 of the upper freq. cut-off, F_{c2}, (Low pass section) use H69B and J59B. Specify the two as K6959. **The high pass series number is first, followed by the low pass number.** Types with dissymmetrical attenuation slopes can be combined. Also specify the three db down cut-off frequencies F_{c1} and F_{c2} and impedance. The price is the sum of the HP and LP section prices.

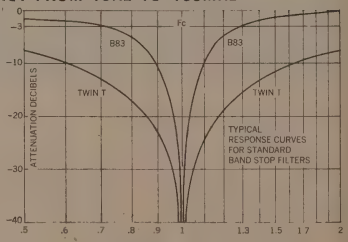
Telemetering: Refer to series K20, K21B, K30 or K31B. TO ORDER specify IRIG Channel number, source and load impedances.

TO ORDER BANDPASS FILTERS — Specify (1) TTE Series No., (2) minus 3db frequencies, (3) source impedance, (4) load impedance. **PRICES** $33 to $72.

INSERTION LOSSES for bandpass types between equal terminations are from 0.5 to 6db depending upon bandwidth, frequency and size. K10 and K11 types have about 10 db, and K12 types about 5db flat loss. **SPECIALS** are available for center frequencies from 10Hz upward and 40db to 3db bandwidth ratios as sharp as 1.2:1. **TO ORDER** Specials, also specify (5) bandwidth and (6) stop band attenuation required.

BAND REJECT STANDARD FILTERS FOR ANY CENTER FREQUENCY FROM 10Hz TO 100MHz

Series	F_c, Center Freq. Range Min.	Max.	Bandwidth −3db	Attenuation	Impedance Ohms Min.	Max.	Circuit	Case No.
B83	10Hz	1MHz	.77F_c & 1.3F_c	50db Notch	50	1 Meg.	L-C	4
D	10Hz	100KHz	.25F_c & 4 F_c	50db Notch	SEE ORDERING INSTRUCTIONS BELOW		Twin-T	2
F	10Hz	100KHz	.25F_c & 4 F_c	60db Notch			Twin-T	2
R20	100Hz	3999Hz	$BW_{3db}/BW_{40db} \leq 5$ For $BW_{40db} \geq 10\%F_c$		10K	50K	L-C	4 or 13
R30	4KHz	100MHz			50	10K	L-C	4 or 13



FREQUENCY RATIO F/Fc

TO ORDER BAND REJECT FILTERS — Specify (1) TTE Series No. or Letter, (2) center frequency, (3) source impedance, (4) load impedance. For Series R20 and R30 specify 40db bandwidth. Twin-T prices and cases apply to all filters using capacitor values from 0.1 MFD to 500 pF. $C = 1/8.85FHz\ (R_{source}R_{load})^{1/2}$. C is in farads. Filters with null frequencies as low as 1Hz are available. Terminations are regarded as resistive unless otherwise specified. **PRICES** $17 to $45.

J80C, CASE 4

SOURCE AND LOAD impedances are equal and resistive for standard HP and LP filters. The insertion loss is less than 0.5db for ±10% matching. Typical Passband flatness within ±0.2db.

SPECIALS for other impedances and unequal terminations are available. Units with cut-off ratios as sharp as 1.06 (0.94 Highpass) are available.

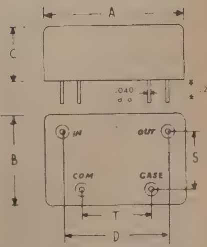
FLAT CASES PC BOARD TYPE



From 500KHz upward flat case "Com" is connected to case.

NOTES: TTE Filters are epoxy encased within hermetically sealed steel cases. The case finish is copper plate per MIL-C-14550 under fused tin per MIL-T-10727A. The maximum power output without de-tuning is 10 to 20 milliwatts for most low frequency types. K10 and K12 types are tested at 100mV and B83 types at .77V output for all imped. levels. Terminations are regarded as resistive unless otherwise specified.

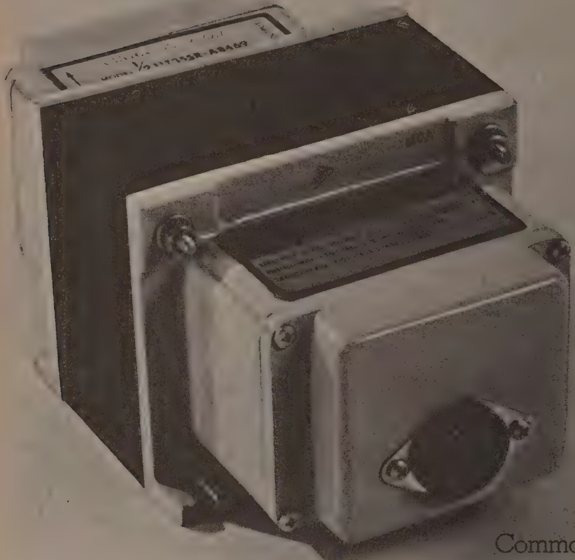
Topaz Ultra-Isolation Transformers will solve your power line noise problems. We guarantee it.



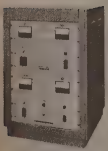
Pete Jorgensen, Magnetics Production Manager at Topaz, was asked recently why the performance of Topaz Ultra-Isolation Transformers is so exceptional. He answered by saying, "Because we have people who have been winding and shielding transformers for 10 years, and they do it unusually well."

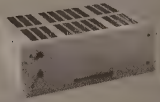
Topaz Ultra-Isolation Transformers protect electronic equipment from noisy power lines and protect clean power lines from noise-generating equipment. The unique Topaz box shielding techniques and the meticulous care taken during manufacturing guarantee the effectiveness of Topaz transformers.

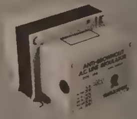
Common-mode noise is attenuated by more than 1,000,000 to 1. Effective capacitance between windings is less than 0.0005 picofarads.

So if power line noise is your problem, write or phone. We'll prove that Topaz Ultra-Isolation Transformers will solve your problem. We guarantee it — or your money back.

Or your money back.







Other Products • Uninterruptible Power Systems • Inverters • Frequency Changers • AC Line Regulators

Topaz is also a major supplier of **custom** power conversion equipment. Contact us.

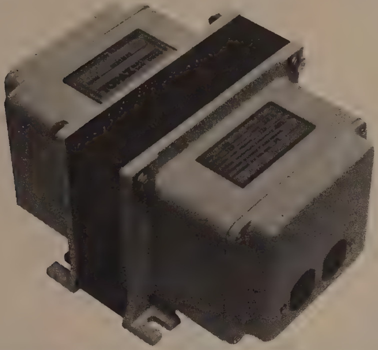
ULTRA-ISOLATION TRANSFORMERS

For eliminating power line noise problems associated with sensitive equipment



TOPAZ ULTRA - ISOLATION TRANSFORMERS are available in single-phase and three-phase versions, from 125 VA to 45,000 VA, and in step-up and step-down configurations, some with provisions for use on several different power line voltages. They are especially designed for these applications:

1. For isolating sensitive instrumentation from noisy power lines.
2. For isolating sensitive power lines from noisy equipment.
3. For isolating noisy equipment from noise-sensitive equipment when both share the same AC power source.
4. For maximum attenuation of common-mode noise (noise between ground and power lines).
5. For excellent attenuation of transverse-mode noise (line-to-line output noise) caused by common-mode noise at the input.
6. For completion of electrostatic guarding of equipment which is protected by an electrostatic shield.
7. For applications in which leakage currents must be kept below critical low levels.

TYPICAL SPECIFICATIONS

Common-Mode Noise Rejection:
.005 pF—greater than 125 dB
.001 pF—greater than 140 dB
.0005pF—greater than 146 dB

Common-Mode to Transverse-Mode Noise Rejection:
Greater than 125 dB at 1 kHz

Electromagnetic Noise:
Less than 0.1 gauss (-20 dB) at 18 in. radius

Standard Voltage Ratings:
120 (for 110, 115, 120 V lines*)
240 (for 208, 220, 230, 240 V lines*)
480 (for 360 440, 480 V lines*)
*Maximum current = VA rating ÷ Nominal Voltage Rating

Operating Voltages:
To 110% of nominal

Operating Frequency:
57 to 63 Hz

Featuring. . .
- Excellent Common-Mode Noise Rejection
- Very Low Leakage Current
- Unique Box-Shielded Design
- Single-Phase and Three-Phase Models
- 50Hz, 60Hz and 400Hz Models
- Money-Back Guarantee

CERAMOLITHIC®

U.S. Capacitor Corporations' monolithic ceramic EMI/RFI filters have evolved in phase with solid state technology. Increasingly higher frequencies in tiny LSI environments make tough demands on designers: better attenuation, in state-of-the-art sizes and at affordable prices.

We've met these challenges at USCC/Centralab by accelerating the filter evolution through research in dielectrics and high-productivity manufacturing techniques.

Here's what today and tomorrow look like.

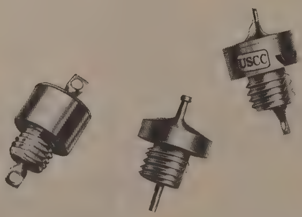
The latest and smallest filters available from USCC – 9900 Series feed-throughs. Better than 70db insertion loss at 10 GHz. Used all the way from medical electronics to CATV.

MIL-STD-461 filters – the smallest ever offered for this use. For any relatively low source and load impedance job, the highest insertion loss at low frequencies.

Also tomorrow's filters today – CASELESS. USCC now offers another step in CERAMOLITHIC® technology – a dielectric that serves as its own outer case – with obvious economics.

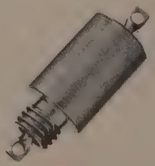
"BUTTON" SERIES

- Epoxy or hermetically sealed;
- 50, 100, 200, 300 VDC and 115 VAC 0-400 Hz;
- 15 amps DC; L section
- .187″ or .312″ thread lengths



MINIATURE 1000 and 2000 SERIES

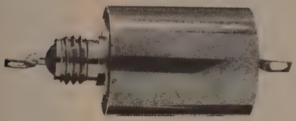
- 50, 100, 200, 300 VDC and 115 VAC 0-400 Hz;
- .06 to 10 amps DC; Pi, L and T sections;
- .187″ or .312″ thread lengths



EMI/RFI FILTERS

MINIATURE 1400 and 2400 SERIES

- 125 VAC and 230 VAC 0-40 Hz;
- .1 to 10 amps DC;
- Pi, L and T sections



SUBMINIATURE 3000 SERIES

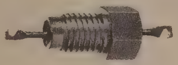
- 3112: 100 VDC; 10 amps; L section
- 3223: 200 VDC; 10 amps; Pi section
- 3300: 50, 100 and 200 VDC; 10 amps;
- Pi and Multi-sections
- 3500: 100, 200 and 500 VDC; 25 amps; Pi section

FEED-THRU CAPACITOR FILTERS 9900 SERIES

- 50, 100, 200 WVDC
- 10 amps DC
- 100 pF to 5000 pF

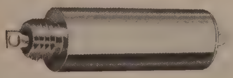
FEED-THRU CAPACITOR FILTER 9000 SERIES

- 50, 100, 200, 300, 500 VDC and 115 VAC 0-400 Hz;
- 10 and 25 amps DC;
- 100 pF to 1.5 Mfd.



MIL-STD-461 FILTER

- Designed for MIL-STD-461 applications;
- 50, 100, 300 VDC and 115 VAC 0-400 Hz;
- .1 to 10 amps DC;
- 5 element inductor fed.



CASELESS EMI/RFI FILTERS

UF and US Series Feed-Thru and Standoff Styles

- 50, 100, 200 WVDC
- 5 amps DC
- 1000 to 5000 pF; 0.01 to 0.05 Mfd.

Vernitron CERAMIC LADDER FILTERS – 9, 11 and 17-disc

DESCRIPTION

Miniature ceramic i-f filters are available at reasonable prices for use in Military and commercial equipment. These rugged, light weight, fixed-tuned devices offer excellent selectivity and stability in less than 0.1 cu. in. Standard stop band rejection to 80 dB and center frequency tolerance varies between ± 2 and ± 3 kHz. Tighter tolerances available on special order. These filters are designed for communications circuit applications where precise center frequency tolerance and high stop band rejection are required.

Standard models in 6 dB bandwidths from 2 kHz to 85 kHz are available at 455* kHz center frequency. Input and output impedence is between 1000 and 2000 ohms.

*Also available in 500 kHz center frequency.

APPLICATIONS

These Ladder Filters are ideal for transistorized i-f amplifier circuitry as well as IC's in AM and FM sets. Their small size, ruggedness and high stopband rejection make them particularly suitable for airborne and handheld transceivers.

Figure 1. Typical response curves for TL6D11-12A and TL40D11-72A. Note that typical shape factors and insertion losses are considerably better than maximum and minimum values shown in table below.

FEATURES

- Stopband Rejections to 80 dB
- Small Size
- Lightweight
- Shape Factor ≤ 2:1
- Hermetically Sealed
- Vibration and Shock Resistant
- Excellent Stability
- Fixed-Tuned

DATA SHEET

Vernitron LOW-FREQUENCY CERAMIC FILTERS –10-50 kHz

New! · All-Soldered Construction

Packaged in HC-6/U cans and hermetically sealed, these miniature single-resonator Low Frequency filters qualify to MIL Standards for vibration and shock-resistance. They can be used singly as simple four-terminal devices, or can be cascaded to provide higher stopband rejection and lower shape factors. Gain stages may be inserted between units with moderate reduction in bandwidth.

New all-soldered construction - no conductive rubber is used - insures highest reliability under adverse conditions. Available in any descrete operating frequency from 10 kHz to 50 kHz.

Typical Test Circuit

Variable Freq. 50⌃or Lower
R_{in}
X or Dot
Frequency Counter
R_{out}
AC Meter Ballantine or Equiv.

$R_{in} = R_{out}$ See Specifications

Typical Cascading

Two LF filters of the same frequency may be simply cascaded. It is suggested that where cascading is intended, units be ordered as "cascaded pairs"; or consider the Vernitron "CLF" series (Bulletin 94037) which incorporate 2 or more factory-tuned elements in a single can, with stopbands ranging from 40 to 80 dB, depending on number of elements.

Vernitron CERAMIC FM FILTER (FM-4)

RUGGED, HIGH-SELECTIVITY MINIATURE FOR HI-FIDELITY FM'S

This miniature 10.7 MHz FM filter — a simple monobloc of high-Q ceramic molded in plastic — combines the advantages of very small size and inherent reliability with distortion-free performance, high selectivity and economy both in component cost and cost of circuit manufacture. It is fully compatible with either conventional or integrated circuitry, and allows design of straightforward filtering circuits with fewer interconnections than with conventional filters.

A notable characteristic is the FM 4's high stopband — typically above 45 dB. With a single-filter circuit, adjacent FM channels 400 kHz apart are suppressed at levels nearly 35 dB. Where two FM 4's are used, stopbands above 80 dB can be achieved.

The unique molded-monolithic structure affords the following advantages: compactness and light weight; virtual immunity to shock; integrity of internal connections; improved thermal insulation. Mounting is simple, as leads are evenly spaced, rigid, and designed for PC insertion with allowance for crimping and flow-soldering.

FEATURES

- Miniature Size
- IC-compatible
- Monolithic Reliability
- Lump-Filter Simplicity

APPLICATIONS

The FM 4 is ideal for FM car radios or portables, where size and shock-immunity are governing considerations; or for FM receivers of highest quality where minimum distortion and high stopband rejection and selectivity are required.

SPECIFICATIONS

	Guaranteed	Typical Characteristics

LADDER FILTERS

Series LTL

100 to 270 kHz

Bandpass capabilities 1 to 10%

For the medium-frequency range, these rugged ceramic bandpass filters offer advantages in price and size over LC filters. Typical shape factors of 2.0 to 1 are achieved in this unique ladder design.

Ideal for navigation and instrumentation applications.

Any Operating Frequency Between 100 kHz and 270 kHz.

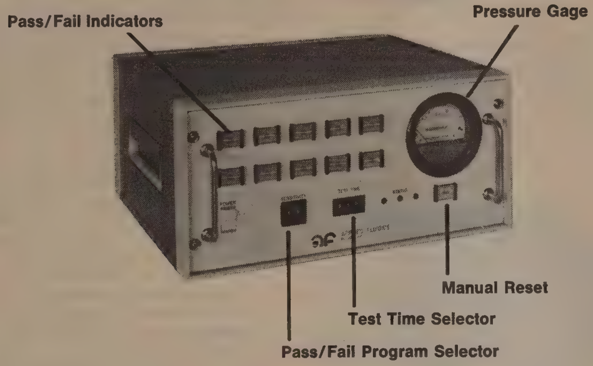
AFI | CENTURY SERIES ELECTRONIC LEAK DETECTION SYSTEMS

for 100% in-line inspection of open or sealed containers

ELECTRONICS CONSOLE



DESCRIPTION

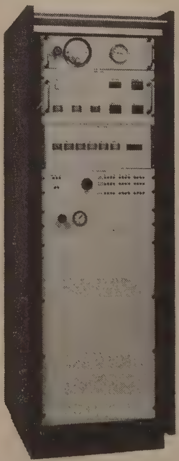
AFI's Century Series Electronic Leak Detection System the ELD-100, for **open** containers, and the ELD-200, for **sealed** containers, are ultra sensitive high speed, solid state systems capable of 100% in-line inspection of virtually any type containers.

The leak detection system consists of two units: a test station which receives the containers to be tested, and an Electronic Console.

The electronic console includes; a data processor which analyzes the test data and determines whether the container under test is to be passed or rejected, a data display panel to visually display pass/fail information, and control logic, for activation and control of the test station, and accept-reject mechanisms.

TYPICAL APPLICATIONS

Plastic containers of any size from 2 cc up
Plastic or steel containers 3 to 55 gallons
Aerosol cans and liners
Drug vials cc's to several litres
Blister packs
Portion packs
Foil packs
Glass bottles
Hot water tanks
Automotive parts
Virtually any closed volume



FEATURES

- Modular construction
- Single or multi station high speed system
- Sequential, or parallel testing
- Detect leaks from holes as small as 0.001″-0.006″
- Ultra sensitive ELD systems available to detect leaks in the low micron range
- Manually programmable pass/fail criteria for optimum reject rates
- Built-in multiplexing capability for high speed on-line testing
- Completely automatic, including start of test, end of test, and rejection
- Visual pass/fail indication
- Adaptable to overstress testing
- Optional automatic control logic for assembly line controllers
- Remote data terminal for remote data display and/or printout
- Remote Control System could be programmed and Q.C. data displayed in a Quality or Production Control Office
- Time Shared Systems — several production lines could be tested from a central control system

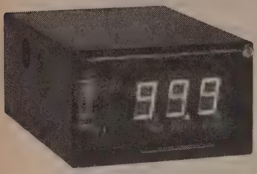
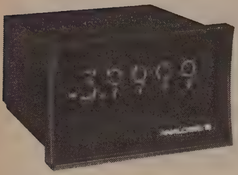
LINE POWERED DIGITAL PANEL INSTRUMENTS



AN2531 Biomedical grade, high reliability at low cost, meeting U.S. and CSA standards. For display only of selected unipolar 3 digit values with non-blinking up-dates at 1 to 4 second rate.

AN2532 3½ digit system grade bipolar unit, with parallel BCD standard. Can measure on command with only 3.3 msec. aperture, to 100 conversions/second.



AN2544 Premier grade, ±40,000 count—industry's most stable accurate and versatile DPI. Features include ±300 volt floating front end, precise signal integration for highest possible NMRR at line frequency and standard latched buffered parallel BCD outputs.

AN2537 Parallel buffered BCD outputs—ideal for printer drive in a bipolar 3½ digit DPI at the lowest price. Adjustable offset and user-set sensitivity for flexibility in special instrumentation and system applications.

Featuring Superior Accuracy, Linearity, Stability, Superior Reliability

The Series AN2500 features DPI modules with resolution ranging from 3 digit to 4¾ digit. These units include units that are cost-optimized for simple, direct view applications as well as more comprehensive models designed to interact with more complex control systems.

Most Analogic DPI's are available in versions to accommodate all normally encountered line voltages throughout the world. Several are equipped with universal tapped transformers.

Features

- LED, Planar gas discharge and Nixie displays available.
- Widest line in the industry — smallest, lowest price, best performance.
- Proprietary dual slope technique — provides inherent noise rejection.
- Programmable decimal points.
- Superior accuracy, linearity, stability.
- Polarity symbols standard in most models.
- Many with ratiometric capability.
- Isolated BCD standard or optionally available.
- Differential front end.
- Ultra low power.

Cutout Dimensions

C = 1.772" x 3.622" (45mm x 92mm)
D = .62" x .80" (15.74mm x 20.3mm)
E = 2.03" x 3.53" (51.56mm x 89.66mm)

LOGIC POWERED DPI'S FOR SYSTEMS APPLICATIONS

Introduction

Logic powered digital panel instruments may have specific advantages over line powered models in applications where 5 volt power is readily available.

Since they require no line transformer or 60Hz power source filtering, they are usually more compact and have less internal power supply dissipation.

A specific Series AN2500 advantage over many logic powered devices of other manufacture is our differential input design that eliminates a significant source of error caused by IR voltage drops in the logic power return.

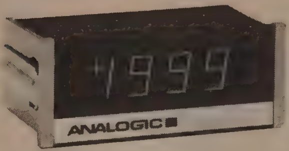
In addition, Series AN2500 is the only logic powered line of DPI's offering the choice of the bright ½" gas discharge style of display, in addition to LED Display.

Featuring

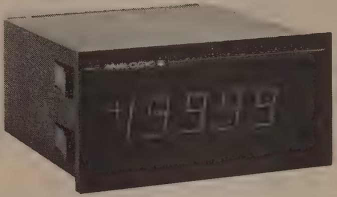
☐ Differential or floating front ends.
☐ Choice of display.
☐ Backed by the most extensive reliability standards and procedures to guarantee dependable performance.

Design Features

- New Reliability Standards, procedures & performance
- Extremely small case sizes
- Gas discharge and LED displays available
- Fully floating and isolated front end on AN2530 models
- Most units offer optional ratiometric capability
- Auto zero, dual slope on most units
- Metal cases standard or optionally available
- Heavy power line filter for minimizing RFI



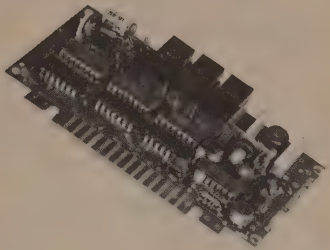
AN2535 Proven design, auto zero, 3½ digit featuring bright Beckman displays in extremely compact case. For portable instrumentation and systems applications. Differential input insures maintenance of specified accuracy for total system. BCD output standard.



AN2545 A premier grade auto zero ±20,000 count unit requiring only 1.2 watts, including its bright .55" Beckman display, this unit is ideal for wide dynamic range portable instruments. For working with certain transducers, the optional four wire ratio capability is particularly appropriate.

Cutout Dimensions

A = 1.750" x .750" (44.45mm x 19.05mm)
B = 3.250" x 1.280" (82.6mm x 32.5mm)
C = 1.772" x 3.622" (45mm x 92mm)



AN2330-L An extremely versatile Digital Panel Instrument. It is a selected unipolar 1000 count logic powered DPM laid out on a single P.C. card for behind the panel mounting. Electrically identical to the AN2530-L, it shares its features — including a truly floating front end, user set sensitivity, least significant digit sensitivity of 1, 2, 5, or 10 and standard BCD outputs. In addition, the AN2330-L has provisions for solder tab wiring and internal placement of the parts and jumpers of the AN86

AN2530 Low cost universal 3 digit model providing truly floating high impedance front end, user set sensitivity, LED or .55" Beckman display in the smallest case size. Ideal for portable instruments and system applications. BCD output standard.

ANALOGIC®

AERO

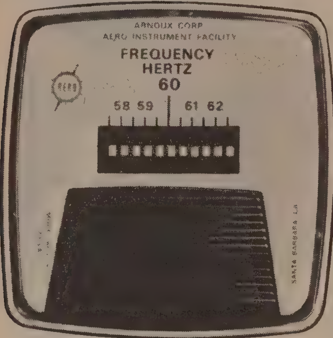
FREQUENCY METERS

OVER 25 YEARS OF CONTINUOUS PRODUCTION

VIBRATING REED METERS

The AERO Instrument Facility of Arnoux Corporation produces over 1000 different types and styles of Vibrating Reed Frequency Meters, with a proved history of usage spanning over 25 years. Unsurpassed for high performance and quality construction, all AERO Frequency Meters provide the inherent advantages of great accuracy (with 0.3% at 72°F, and within 0.1% on special order); long term stability (±75 ppm per degree F. from -60° to +180°); low power consumption; self-checking characteristics; high reliability; and extreme ruggedness. No adjustments are ever required on Vibrating Reed Frequency Meters. AERO meters are available with . . . . .

- **1.5 inch to 3.5 inch Round Cases**
- **Bakelite and Metal Construction**
- **Hermetic Sealing**
- **1 Reed to 11 Reeds**
- **Center Frequencies from 20 Hz to 400 Hz**
- **Voltages from 24 Vrms to 220 Vrms**
- **Running Time Indicators**
- **Combination Meters**

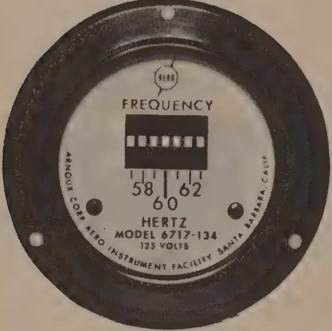


3.5 Inch Full View Meters

MODEL* NO.	CENTER FREQUENCY	FREQUENCY RANGE	NUMBER OF REEDS	REED INTERVAL	PRICE PER UNIT 1-24	25-49	50-99
2810.183	[50 Hz 60 Hz	48 to 52 Hz 58 to 62 Hz]	10	1 Cycle	37.21	24.93	20.47
4059-183	400 Hz	380 to 420 Hz	9	5 Cycles	42.11	28.21	23.16
5D31-183	50 Hz	47.5 to 52.5 Hz	11	½ Cycle	37.03	24.81	20.37
5717-183	50 Hz	47 to 53 Hz	7	1 Cycle	34.55	23.15	19.00
6D31-183	60 Hz	57.5 to 62.5 Hz	11	½ Cycle	37.03	24.81	20.37
6511-183	60 Hz	55 to 65 Hz	11	1 Cycle	37.03	24.81	20.37
6717-183	60 Hz	57 to 63 Hz	7	1 Cycle	34.55	23.15	19.00
6815-183	60 Hz	58 to 62 Hz	5	1 Cycle	32.55	21.81	17.90

Mounting Data. Three equally-spaced mounting studs (No. 8-32) are permanently affixed to rear of meter face panel, on 3.16" diameter (single studs at top center). Meter case requires 2.18" diameter hole. Total depth from rear of face panel is 2.50", including two No. 10-32 electrical connection studs. Meter face panel is 3.50" square and approximately 0.4" deep.

*Model numbers specify non-hermetically sealed metal cases; 0.3% accuracy; standard voltage of 117 Vrms; and input resistance of 10,000 ohms.



3.5 Inch Round Meters

MODEL* NO.	CENTER FREQUENCY	FREQUENCY RANGE	NUMBER OF REEDS	REED INTERVAL	PRICE PER UNIT 1-24	25-49	50-99
2810-134	[50 Hz 60 Hz	48 to 52 Hz 58 to 62 Hz]	10	1 Cycle	33.58	22.50	18.47

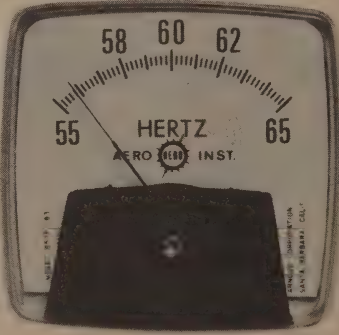
5D31-134	50 Hz	47.5 to 52.5 Hz	11	½ Cycle	33.40	22.38	18.37
5717-134	50 Hz	47 to 53 Hz	7	1 Cycle	30.92	20.72	17.01
6D31-134	60 Hz	57.5 to 62.5 Hz	11	½ Cycle	33.40	22.38	18.37
6511-134	60 Hz	55 to 65 Hz	11	1 Cycle	33.40	22.38	18.37
6717-134	60 Hz	57 to 63 Hz	7	1 Cycle	30.92	20.72	17.01
6815-134	60 Hz	58 to 62 Hz	5	1 Cycle	28.92	19.38	15.91

Mounting Data. Three equally-spaced mounting holes are through meter face panel on 3.16" diameter (single hole at top center). Holes accept No. 8-32 mounting hardware (supplied). Meter case requires 2.69" diameter hole. Total depth from rear of face panel is 2.31", including two No. 6-32 electrical connection studs. Meter face panel is 3.50" diameter and approximately 0.2" deep.

*Model numbers specify non-hermetically sealed bakelite cases; 0.3% accuracy; standard voltage of 117 Vrms; and input resistance of 10,000 ohms.

POINTER TYPE METERS

AERO's new line of Pointer-Type Meters feature advanced microminiature circuits for performing frequency-to-DC conversion with remarkable linearity and stability. These circuit innovations have now made pointer-type meters both economical and practical for production. Pointer-Type Meters are presently available in three frequency ranges, with accuracy and stability as great as 0.3 Hz in the 45 to 65 Hz ranges. The input voltage for all units is 115 ±15Vac, with power consumption approximately 2 watts. Operating temperature range is 0° to 150°F.



MODEL NO.	FREQUENCY RANGE	ACCURACY & STABILITY	PRICE PER UNIT 1-24	25-49	50-99
557P-183	45-55 Hz	0.3 Hz	58.69	42.55	36.67
657P-183	55-65 Hz	0.3 Hz	58.69	42.55	36.67
407P-183	380-420 Hz	2.0 Hz	58.69	42.55	36.67

ARNOUX CORPORATION

POWER SUPPLIES

METALLIC TYPE

MAGNETICALLY REGULATED INSTRUMENT SUPPLIES

The precision-regulated, ac-to-dc power converters described here are among a great many types Arnoux Corporation has developed and marketed for airborne, missile, and ground-support equipment applications. Of solid-state design for reliable long-life duty, these converters have no moving parts or tubes. The units are stabilized over a wide range of input voltage (115 ±15 vac) and temperature (typically, from −65°F to +160°F). Detailed specifications on all units are available on request.

Designed for use in 400-cycle systems, these power converters are either magnetic-amplifier or transistor regulated. The magnetic types are dual regulated with ferroresonant or standard transformer input regulator and magnetic-amplifier output regulator. The transistorized models have a single, fast-response, output regulator that produces exceptional dynamic characteristics.

These units can be used wherever there is a requirement for precision power sources with fast response, low line current distortion, compactness, and reliability. Arnoux's power converters are particularly suited for operation or test in missile and aircraft flight systems, for checkout and control of ground-support equipment, and for transducer excitation or voltage standards work.

Producing from 5 vdc to 500 vdc with corresponding current variations, this series offers the user a wide selection of output voltages.

Electrical Characteristics
Magnetic Types with Ferroresonant Input

Static Regulation: for a line variation of ±15 volts under a full-rated load, static regulation in the output is within ±0.2%. Typical values are from ±0.05 to ±0.1%. For frequency changes of ±5%, regulation is less than ±0.15%. Typical values are from ±0.1 to ±0.25%. For load variation, typical values are regulation of less than 0.05% for a change of from 20% of rated load to full load; less than 0.1% for a load change of from 0 to 100%.

Dynamic Regulation: a 10% instantaneous change in line voltage results in less than 3% maximum change in output voltage, with a 95% recovery within 15 msec. For a load change of 10%, the instantaneous output-voltage excursion is 3%, with a 95% recovery within 100 msec.

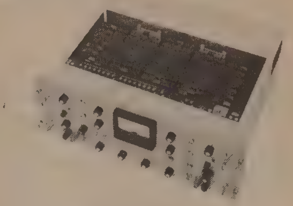
ARNOUX

TELEMETRY DECOMMUTATION SYSTEMS

Arnoux's unmatched reputation for the finest in Telemetry Decommutation Systems and components is exemplified by the Telemetry Commutation Simulator Model TCS-2.



Arnoux Corporation has developed a precision commutator simulator for use in ground station checkout and calibration. Because of the inherent accuracy and stability of the Arnoux TCS-2, it can satisfactorily perform two functions: that of a laboratory standard for decommutator evaluation and that of an operational commutator simulator for decommutator adjustment and calibration.

Basically, the TCS-2 generates PAM and PDM wave trains, which exactly simulate the signals developed by both IRIG and nonstandard telemetry commutation systems. Among the outstanding features, providing universal application, are a PAM nonreturn-to-zero output, a commutation-rate change from 2 to 10,000 pulses per second, and a wide degree of flexibility in channel-data output.

Operational simplicity and ease are illustrated by the front-panel controls. For example, the pulse-monitor meter directly displays pulse rate, PAM duty cycle, and PDM pulse widths. This capability is unique in the Arnoux unit among all existing simulators. Both zero and full scale reference channels may be switch selected to any place in the frame.

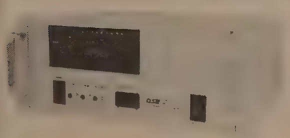
ANALOG MULTIPLEXERS & A/D CONVERTERS

Dynamic System Electronics manufactures a full line of Analog Multiplexers and Analog-to-Digital Converters.



855 SERIES
High-level analog system

The 855 Series Analog Subsystem is used to generate digital representations of analog voltages and is normally incorporated in systems monitoring such sources as strain gauges, radar systems, thermocouples, accelerometers, pressure sensing transducers, medical devices, and numerous other sources of analog information.

DSE's 855 Analog to Digital Subsystems offer the following features:

- Conversion rates up to 100K samples/sec.
- Up to 128 differential (256 single ended) channels
- High accuracy
- Common Model Voltage Limit 12 volt (either line to ground)
- Input signals ±10 volts
- Up to 17 output bits and complement
- All solid-state

SPECIFICATIONS

OPERATION

Analog Inputs			Up to 128 differential Up to 256 single ended
Conversion Rate (sample/sec.)	No Bit	With S&H	Without S&H
	12	80K	100K
	13	73K	93K
	14	68K	88K
	15	63K	83K
	17	58K	78K

Resolution	
Binary	Up to 15 bits
BCD	Up to 17 bits
Accuracy (0 - 50°C)	
Full Scale Accuracy	±.01% ±½ LSB
Full Scale Linearity	±.01%
Temperature Effect/Full Scale Coefficient	±.001%/°C
Common Mode Rejection	
DC	80 db
60 Hz	60 db
Common Mode Voltage Limit	12V (either line with respect to ground)
S & H Aperture Time	50 nanoseconds, max.
S & H Hold Time	100 μs. for hold droop of less than 1 mv

INPUTS

Analog Voltage (standard)	±10 volts
Input Impedance	
OFF or ON	100 megohms all channels
Source Impedance	1000 ohms, max.
Input Over-voltage — Each Channel	
Standard	±30 volts
Optional	±100 volts
Common Mode Impedance	
Resistive	100 megohms
Capacitive	100 pfd
Input Logic	TTL compatible

OUTPUTS

Parallel Data Output	Up to 17 bits and complement
Binary, BCD or Decimal Display	
Output Logic	TTL compatible

PHYSICAL PARAMETERS

Dimensions	7″ x 19″ x 17″
Shipping Weight	50 lbs., max.

860 SERIES
Low-level analog system

The 860 Subsystem provides a true low-level, high-speed gain ranging capability. It accepts up to 96 differential inputs, automatically selects the gain, and converts this data into a binary output.

DSE's 860 Gain Ranging Subsystems offer the following features:

- Automatic Gain-Ranging
- Effective Dynamic Range of 24 bits
- Up to 96 differential channels
- Input signals from ±10 mv to ±10V
- Up to 13 bit +4 bit gain output
- All solid-state

SPECIFICATIONS

OPERATION

Number of Channels	Up to 96 (differential)
Automatic Gain Ranging	11 ranges
Voltage Range	±10 mv to ±10.24V
Conversion Rate	
Auto	0.83 kHz (max.)
Programmed	1.7 kHz
Resolution	13 bit
Accuracy (0-50°C)	±0.06% of full scale (at selected gain)
Common Mode Rejection	
DC	120 db
60 cps	100 db
Max. Common Mode Voltage	±12V (with 10 mv signal)

INPUTS

ASSOCIATED RESEARCH, INC

INSULATION TESTING INSTRUMENTS

Insulation Resistance Testers

Ranges from 100 to 10 million megohms at test potentials to 10 KV.

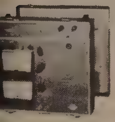
The MEG-CHEK® megohmmeter provides a wide selection of battery and line-powered instruments for accurate insulation resistance measurements of circuits, components, cables, motors, etc. They are direct reading and push button operated requiring no cranking or leveling.

Select from 17 models ranging from pocket-size to portable 10 KV with variable voltage. Some models combine megohm with ohm and AC-DC volt scales in one instrument. Five popular models are:

Model	DC Test Voltage	Max. Megohms	Features	Price
2001	500	100	Pocket-size	$ 99
2201	500	200	Includes 2K ohm and six AC-DC volt scales	225
2211	1000	2000	200 K ohm range	290
2850	500/50	10 Million	Constant test voltage through 6 decades	345
2955	0-2,500	50,000	Adjustable test voltage	945

Request MEG-CHEK Megohmmeter Bulletins by model number.

Portable DC HYPOTS® to 200 KV



Output of the several portable DC HYPOTS is continuously variable from 0 to maximum with the voltage metered directly in the output. Leakage current measurements are on four range meters reading down to as low as 0.05 microamps. Features: 2% metering ccuracies, electronic circuit protection, by-pass nd metered return terminals, grounded steel cases, ilicon rectifiers, plug-in high voltage leads, etc.

Model	Output Voltage	Output Current	Price
5205	0-5 KV	2.0	$ 550
5212	0-10 KV	2.0	675
5220	0-15 KV	2.0	735
5471	0-50 KV	5.0	2450
5321	0-100 KV	5.0	3115

Request Portable DC HYPOT Bulletins

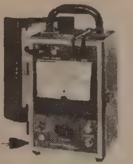
Two 60-page Testing Manuals available

Each contains bulletins, specs, application data and prices on instruments. For a free copy write on your company letterhead for either:

Manual 2900–test instruments for electronic equipment and systems (as illustrated above).

Manual D-62–test instruments for HV cables, generators and utility equipment (as illustrated on back of this sheet).

A-C HYPOT Jrs... to 10 KV, limited current



Portable a-c dielectric strength testers providing outputs continuously variable from 0-1500 V up to 10,000 V a-c. Use of neon breakdown and leakage current indicators in conjunction with collapsing field-type high voltage transformers assures rapid and safe production testing.

The leakage current indicator is adjustable from 0.3 to 3 ma. A 4½" kilovoltmeter provides high accuracy. Short-circuit current cannot exceed 18 ma.

Three popular models are:

Model	Output Voltage	Price
411	0-2,500	$225
404	0-4,000	235
422	0-10,000	355

HYPOT Jr. Automatic "Squawker" Models

Available with output voltages from 0-1500 volts to 0-6000 volts a-c. Similar to the standard HYPOT Jr. models but include an audible signal unit and external control terminals.

DC and Combined AC/DC HYPOT Jrs.

offer same features as described above, plus test potentials to 5 KV.

Request AC & DC HYPOT Jr. Bulletins.

Insulating Materials Testers

A full range of testers for solid and liquid insulating materials to 100 KV and higher is available. Due to the rapid progress of insulating materials and testing techniques, new equipment is added whenever required to meet ASTM, MIL and Federal test specifications.

Model 4501 Materials Testing HYPOT 0-35 KV at 2 KVA

This popular model meets dielectric strength testing requirements of Specification D-149, ASTM Standards on Electrical Insulation Materials. Output continuously variable from 0-35 KV a-c at 2 KVA (intermittent rating). Magnetic breaker trips when specimen breaks down. Output termination in jacks at center of the lucite cabinet top accepts the interchangeable ARI materials testing fixtures. Optional features: interlocked clear lucite test cage and selection of ARI plug-in materials testing fixtures, automatic rate of rise, dual sensitivity circuit breaker, etc.

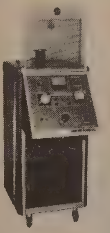
Request Insulation Materials Tester Bulletin

High Voltage Test Equipment to 500 KV AC and 1,000 KV DC

A full range of instruments for extra high voltage dielectric strength testing. AC or DC potentials at capacities of up to 150 KVA or more. Control and measurement features include: automatic rate of voltage rise, memory circuit to record breakdown voltage, output current metering, separate low voltage control and high voltage test cabinets and many others.

ARI has over 30 years experience in the design and manufacture of heavy duty very high voltage test equipment. All instruments are ruggedly constructed and fully tested in our own high voltage laboratory.

Corona Testing Equipment



New instruments detect, display and measure corona caused by voids, surface or other conditions in the insulation sample or the equipment under test.

Instruments include: specially constructed corona-free HYPOT test set, a pickup network to extract the true corona signal and the corona detection display module. Detector also incorporates a calibrator to make quantitative corona measurements down to 0.1 picocoulombs.

These modules are available as individual units or as a complete integrated instrument. Standard models with test potentials of 10 to 100 KV AC include these two popular models:

Model	Output KV	KVA Capacity	Cabinet Style	Price
4074	10	0.25	Bench	$2250
4309	35	1.0	Console	3950

Request Bulletin 4-1.9.

Mobile HYPOTS . . . to 150 KV DC

Heavy-duty mobile test sets for determining insulation leakage and dielectric strength of cables, bushings, switch-gear, transformers, motors and generators.

Outputs continuously variable from 0 to 45 KV and on up to 150 KV, with ratings of 2.5, 5, 10 ma. at full voltage.

Features include: 4½" kilovoltmeter connected directly across the high voltage output; three-range 4½" microammeter electronically protected against overload; zero return interlock; connector for remote safety interlock; fast-acting magnetic circuit breaker in output to protect high voltage circuits and external load; thermal overload breaker to protect input circuits; long-life silicon high voltage rectifiers; metered return and bypass return terminals for measurement of load (leakage) or bypass (guard) currents.

Request Mobile DC HYPOT Bulletin 5-1.16.

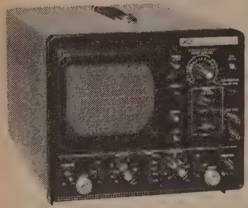
B+K PRECISION Quality Oscilloscopes

NEW! MODEL 1472 DUAL-TRACE, 15 MHZ TRIGGERED SWEEP OSCILLOSCOPE



Another outstanding oscilloscope from B & K – Precision. Bandwidth of 15 MHz is more than ample for the vast majority of applications in the lab, industry, on the service bench. Dual display of waveforms for quick, positive comparison. Triggered and automatic sweep. In AUTO mode, sweep is obtained without input signal. Six operating modes: CH A, CH B, Dual (A & B), with CHOPPED mode selected automatically for sweep speeds of 1 mSEC or slower, and ALTERNATE mode automatically selected for all faster speeds. TV-H and TV-V positions on sweep selector switch provided by sync separator circuitry.

SPECIFICATIONS

VERTICAL AMPLIFIERS (CH. A and B)

Sensitivity: 10 mV/cm to 20 V/cm, ± 5%, divided into 11 calibrated ranges, variable between ranges. **Response:** DC, DC to 15 MHz; AC, 2 Hz to 15 MHZ (-3 dB). **Risetime:** Less than 24 nanoseconds.

SWEEP SYSTEM

Type: Triggered and automatic. **Sweep Time:** 0.5 µSEC/cm to 500 mSEC/cm (±5%), divided into 19 ranges: 1, 2, 5 sequence; concentric sweep vernier control. **Magnification:** 5 times at all speeds; maximum sweep speed becomes 0.1 µSEC/cm.

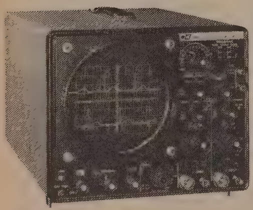
HORIZONTAL AMPLIFIER

Sensitivity: 10 mV/cm. **Response:** DC to 1 MHz (-3 dB).

OTHER SPECIFICATIONS

Calibration Voltage: 1 kHz, square wave of 1.0 V, peak-to-peak (±5%).
Intensity Modulation: 20 V peak-to-peak, minimum.
Size: 7-7/8 x 9-7/8 x 14-5/8".
Shpg. wt.: 26 lbs.
Stand: With tilt stand for eye-level viewing.
Probes: 2 required (see listing on next page).
B & K-Precision Model 1472 .... **Net: $595.00**

MODEL 1470 DUAL-TRACE, 10 MHZ TRIGGERED SWEEP OSCILLOSCOPE



Compare inputs, outputs. Six operating modes.

Features dual display of waveforms, their sum or difference, for fast, easy comparison. Its speed in checking inputs and outputs of video amplifiers is unsurpassed; same is true for checking the burst into and out of gate amplifiers. Has both triggered and automatic sweep; TV sync separator circuit for TV-H and TV-V; six operating modes, including alternate and chopped displays; large 5" screen with illuminated scale; bezel accepts standard camera mounting bracket. An extremely versatile scope with a wide range of applications. 100% solid state, except for CRT. Size: 9x10x7". For 105-125 VAC, 50-60 Hz. Complete with tilt stand for convenient viewing and Mylar vector overlay for Vectorscope function. Shpg. wt., 28 lbs.
B & K-Precision Model 1470. Less probes (2 required). . . Net: $580.00

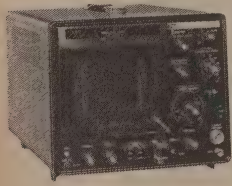
Model 1470 Specifications

VERTICAL AMPLIFIERS (Ch. 1 and 2)
Sensitivity: 10 mV/cm to 20 V/cm, ±5%, divided into 11 calibrated ranges. Concentric variable control between ranges. **Response:** DC, DC to 10 MHz; AC, 2 Hz to 10 MHz (-3 dB). **Operating Modes:** CH. 1 only; CH. 2 only; ALT; CHOPPED; ADD; CH. 2 invert. **Chopping Frequency:** 140 kHz.

SWEEP SYSTEM:
Type: Triggered and automatic. **Sweep Time:** 1 µSEC to .1 SEC/cm (±5%) in 16 steps (1, 2, 5 sequence); concentric variable control between ranges. **Magnification:** 5 times at all speeds.

HORIZONTAL AMPLIFIER
Sensitivity: 30 mV/cm. **Response:** DC to 800 kHz (-3 dB).

Model 1465 with Exclusive CALI-BRAIN®

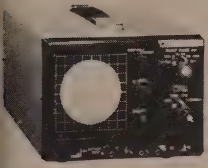


CALI-BRAIN—another B & K first! Special CRT screen has 2 scales, one on each side; selecting your vertical attenuator range automatically lights up the correct scale and produces a digital readout of full scale volts above the screen. To read peak-to-peak volts faster and more accurately, here's all you do: (1) Get pattern on screen; (2) pull out CALI-BRAIN knob (vertical position control); this collapses the horizontal sweep and shifts the resulting vertical line to the proper scale; (3) position the compressed waveform on the base line; (4) read the peak-to-peak volts directly off the screen! 100% solid-state. 10 MHz bandwidth, triggered sweep, automatic sync. With tilt stand. 9x10x17". For 105-125 VAC, 50-60 Hz. Shipg. wt., 27 lbs.
B & K - Precision Model 1465. Less probe. .... Net: $428.00

Model 1460 Triggered Sweep Deluxe Oscilloscope

Fully automatic triggered sweep. View the entire composite TV signal or any portion thereof, including the VITS and "back porch" of the horizontal sync pulse—all in perfect sync. Special sync separator circuit operates in all 19 triggered sweep positions, including TV-H and TV-V positions; switch back and forth from 2 horizontal lines to 2 vertical fields—with no other adjustments! DC to 10 MHz bandwidth; 10 millivolts/cm sensitivity displays smallest signal levels. DC amplifier. Has 1, 2,5 steps on calibrated vertical attenuator. Front-panel Vectorscope capability. Mylar vector overlay and tilt stand. Size, 9x10x17". For 105-125 VAC, 50-60 Hz. Shpg. wt., 27 lbs.
B & K - Precision Model 1460. Less probe............ Net: $450.00

Scopes & Transistor Testers B+K PRECISION



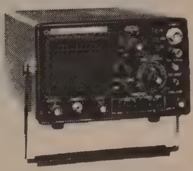
Model 1403 3" All-Purpose Mini-Scope

Here's a fine general-purpose oscilloscope: a 3", solid-state, highly reliable, rugged "Mini-Scope" that's so compact and portable, you'll take it with you wherever you go! Perfect for freeing more expensive scopes from such "menial" tasks as monitor-ng, etc. Trace is sharp and bright. DC amplifiers on both vertical and orizontal axes; direct-deflection terminals for waveforms up to 150MHz.

SPECIFICATIONS

Sensitivity: 20 mV/cm. **Response:** DC,DC to 2 MHz; AC, 2Hz to 2 MHz both -3dB). **Max. Input:** 600 V p-p. **Input Impedance:** 1 megohm/30 pF. **Sweep:** Recurrent. **Time Base Ranges:** 10-100 Hz, 100 Hz-1 kHz, 1-10 Hz, 10-100 kHz; continuously variable between ranges. **Sync:** Internal nd negative. **Size:** 5 1/4 x 7-3/8 x 11 1/4. **Power Requirements:** 117/234 VAC, 50-60 Hz; 15 watts; 3-wire AC cord. With leads, spare fuse. Wt., 11 bs.

& K-Precision Model 1403 .... Net: $189.00



Model 1431 3" Triggered Sweep Scope

A compact 3" scope with exceptional capabilities: triggered sweep, automatic sync, DC to 10 MHz bandwidth. Small size leaves lots of room on bench for auxiliary equipment—makes it easy to handle and store the 1431. Has TV-H and TV-V positions on sweep selector. Very sensitive—displays smallest signal levels in transistor and IC circuits and positive sync. Also displays high frequency signals such as TV color burst. Fast writing speeds of up to 0.1 microsecond per division. All solid state. Weighs only 8½ lbs.

SPECIFICATIONS

Sensitivity: 10 mV/DIV to 20 V/DIV; 11 calibrated positions. **Response:** DC, DC to 2 MHz; AC, 2 Hz to 10 MHz. **Sweep:** Automatic and triggered. Sweep time, 0.5 μSEC/cm. **Size:** 4-3/4 x 7-7/8 x 12-7/8". For 105-125 VAC, 50-60 Hz. Has 3-wire cord. Less probe; see probe listings above. Shpg. wt., 11 lbs.

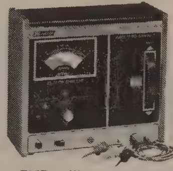
B & K-Precision Model 1431 .... Net: $399.00

Model 501-A Curve Tracer for Analyzing Solid-State Devices

- Pin-points BAD devices in-circuit

The 501-A is to solid-state devices what the mutual conductance tube tester is to vacuum tubes. It's the best way to analyze semiconductors: by displaying their curves on the screen of an auxiliary scope. Measures gain (beta); leakage, breakdown voltage (non-destructive), output admittance, etc. Tests J-FET's, MOS-FET's, signal and power bipolar transitors, UJT's, diodes, Triacs, SCR's, diodes. Electronic current limiting—no IR drops to affect curves. With FP-3 probe for in-circuit testing. 4x10x9½". For 105-125 VAC, 60 Hz.

B & K - Precision Model 501-A. Shpg. wt., 6 lbs....... Net: $163.00



NEW! Model 520 Transistor Tester

Here's the answer to those transistor-testing jobs! "Human-engineered" front panel—less reference to manual is required with the 520 than with any other transistor tester. **In-Circuit Tests:** GOOD/BAD test for PNP and NPN devices; F.E.T.'s and SCR's. Automatically identifies: NPN or PNP; silicon or germanium. **Out-of-Circuit Tests:** GOOD/BAD test for PNP and NPN transistors; F.E.T.'s, SCR's; leakage, IDSS. Identifies NPN or PNP; silicon or germanium. Measures reverse leakage from 0.1uA to 5 mA. **Other Features:** "GOOD" indication by audible tone, in or out of circuit. Gain test switch automatically identifies base or gate lead for good transistors or F.E.T.'s. No charts needed for leakage tests—dial scale calibrated for different types of devices. Actually determines presence of GAIN in circuit—unlike testers which only measure phase inversion or diode front-to-back ratios. Size: 8x7x3 1/2". For 105-1250 VAC, 50-60 Hz. with FP-5 probe. Shpg. wt., 7 lbs.

B & K-Precision Model 520 .... Net: $150.00

SCOPE PROBES AND CASES

Probes for B & K-Precision Oscilloscopes

The following probes are for use with B & K—Precision scope Models 1431, 1440, 1460, 1465, 1470 and 1472.

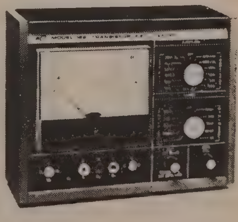
MODEL PR-20 PROBE. Combination 10:1/DIRECT probe, with spring-loaded clip-on tip. Input impedance: Low-capacity, 10:1, 10 megohms/18 pF; DIRECT, 1 megohm/120 pF. Net: $20.00

MODEL PR-24 PROBE. Combination probe as above, but with wider frequency band-width to especially accommodate the wider band-width of the Model 1472 scope. Net: $28.00

MODEL PR-153 PROBE. Demodulator probe for viewing RF and IF modulation waveforms on B & K—Precision scopes. Net: $35.00.

Cases for Scopes and HV-40 Probe

odel No.	For	Net Each
LC-14	Model 1403 scope	$10.00
LC-31	Model 1431 scope	10.00
LC-70	Models 1460, 1465, 1470 and 1472 scopes	25.00
LC-32	Model HV-40 probe tester	12.00



Model 162 Transistor/ F.E.T. Tester

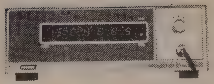
Reliable, fast, low-cost way to check transistors and F.E.T.'s in- and out-of-circuit. Easy to operate. Go-No Go tests tell you instantly if device is defective. Tests: Diodes, Unijunctions, SCR's, Triacs, etc. Checks gates of dual-gate F.E.T.'s separately. Measures: $I_{CBO}/I_{CES}/I_{CEO}/I_{GSS}$/Beta/Gm. 4½" meter. Size, 7¼x9x4" D. With batteries and leads. Shpg. wt., 6¾ lbs.

B & K - Precision Model 162 .... Net: $128.00

Model HV-40 High-Voltage Probe

Measures up to 40,000 volts with 2% accuracy. Tracking accuracy, ±2% of full-scale. Reading accuracy, ±2% at 25 KV. 1.75" probe tip. Shpg. wt., 1½ lbs. .... Net: $35.00

B+K PRECISION Power Supplies & Generators



New! Model 1801 Frequency Counter

High-quality, lightweight, auto-ranging frequency counter for measurements in the range of 20 Hz to 40 MHz. Crystal-controlled 10 MHz internal time base with stability of ±0.1 PPM (±1 Hz). Has 6-digit display plus 3 L.E.D.'s for indicating "kHz", "MHz" or overrange. Excellent for lab or field use. Frequency range: 20 Hz to 40 MHz guaranteed, 10 Hz to 60 Hz typical. Function switch selects "1 SEC" for reading to the closest Hz, or "AUTO" for maximum resolution without overranging. Accuracy, ± time base accuracy, ± 1 count. Resolution, 1 Hz. Input impedance, 1 megohm, shunted by 25 pF. Diode-protected. Maximum input: 200 V to 500 Hz, derate linearly to 100 V @ 1 kHz; 100 V from 1 kHz to 5 MHz, derate linearly to 50 B at 40 MHz (all voltage values = peak AC + DC). Sine wave sensitivity: 30 mV RMS guaranteed, 15 mV RMS typical, over full range. Size, 2-3/4 x 8½ x 10" D. For 105-130 VAC, 60 Hz; 25 watts max. With combination tilt stand/handle.

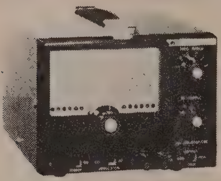
B & K–Precision Model 1801 .... Net: $230.00

Model 1601 0-50 VDC Regulated Power Supply

Provides 0-50 VDC, continuously variable, over full range, with a single control. Also, 0-2 amperes. Simplified current setting: does not require application of short circuit to output terminals. To set current, no short-circuiting of output terminals is necessary. Fail-safe overload protection automatically shuts power supply down whenever current exceeds the preset level, and overload indicator on the front panel lights up. STANDBY switch disconnects load for safe, quick adjustments without disturbing settings. Regulation: load, .05% typical; line, .02% typical. Ripple: 5 mV p-p max. Size: 14-1/8 x 3-7/8 x 10". For 105-125 VAC, 50-60 Hz. Complete with leads and instructions. Shpg. wt., 13 lbs.

B & K-Precision Model 1601 .... Net: $175.00

MODEL 1602 0-400 VDC SUPPLY. Fully regulated, continuously variable output over full range–with a single control. Also: 0-200 mA, fully regulated; 0-100 VDC bias @ 2 mA; 6.3/12.6 VAC @ 3.5 A. Same size as Model 1601. Shpg. wt., 13 lbs. Net: $185.00



Model 2050 RF Signal Generator

Rugged, versatile, accurate RF signal generator. Built to withstand the rigors of continuous portable use, yet it's very compact and weighs. only 5 pounds! All solid-state circuitry uses F.E.T.'s in RF and audio oscillator stages for greater stability and maximum linearity of modulated signals. A single, special-design PC boards holds 90% of the components, assuring highest frequency stability. Zener-regulated power supply is internally fuse-protected. RF output is isolated for maximum protection against external voltage sources. Provides 100 kHz to 30 MHz in 6 bands, with 1.5% accuracy. Outputs: RF, modulated RF (400 Hz) and externally modulated RF. Attenuator: Combination HIGH-LOW switch, plus continuously variable RF output control for approximately 20 dB change. Size: 6-1/8x71/2x9-3/4"D. For 117/234 VAC, 50-60 Hz. Has 3-wire grounded line cord. Shpg. wt., 7 lbs.

B & K-Precision Model 2050 .... Net $107.00

Model 3050 Sine/ Square Wave Generator

Versatile audio frequency generator with circuitry based on the Wien bridge oscillator. Ideal as signal source for phase and time measurements; for characteristic measurements using square waves; as low-distortion source for AF measurements. All solid state; extremely high stability with ±10% line voltage variations. Outputs: 4 ranges, 20 Hz to 200 kHz. Accuracy, ±(3% + 2Hz). Sine wave o.p.: 10 V RMS, ±10% @ 1 kHz. Sq. wave o.p.: 10 V p-p or better. Rise/fall time: 0.5 μSEC or less.

Other Specs: Frequency drift, less than 0.5%. Output level variation, less than 0.5 dB. (Both with 10% line voltage variation.) Size, 7-3/4x9-5/8x6" H. Net wt., 6¼ lbs. Factory-set for 117VAC, 50/60Hz; can be converted to 230VAC and 100VAC. With leads.

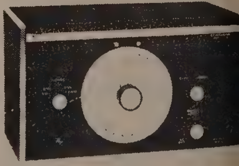
B & K - Precision Model 3050 .... Net: $133.00

Model E200D RF Signal Generator

Features 100% silicon transistor circuitry and zener-regulated power supply for accuracy, stability and long life. Six individually shielded step attenuators plus variable fine output level control with calibrated meter provide widest range of outputs with known signal levels. Full shielding eliminates spurious radiation even at outputs of 1μV. Internal crystal calibrator for accuracy of better than 0.1%. Has 200μA d'Arsonval meter for accurate monitoring and setting of RF carrier and modulation levels. Crystal calibrator provides audible zero-beat through built-in speaker. Can be used as crystal-calibrated marker. 100kHz to 54MHz on fundamentals and 54 to 216MHz on harmonics. Outputs: Unmodulated RF; modulated RF; externally modulated RF; 400 Hz audio. For trap, bandpass coil alignment; FM/AM receiver alignment; stage-by-stage amplifier gain tests; signal tracing. 100-130 VAC, 50-60 Hz. 16 lbs.

B & K-Precision Model E200D .... Net: $229.00

Model E310B Sine/ Square Wave Generator



Latest version of the industry standard. For service shops testing hi-fi equipment; for schools, labs, industry. Now features 100% solid-state circuitry; F.E.T. in oscillator, all-silicon transistors. Fully shielded–no signal spill-over to other equipment. Extended ranges: Sine Wave: 20 Hz to 2 MHz. Square Wave: 20 Hz to 200 kHz. Constant-voltage output over each band and from band-to-band. Features step attenuation of both sine and square wave outputs. Ideal fo amplifier, P.A. testing; loudspeaker resonance tests; input/output impedance measurements; modulation of RF signal generators; synchronizing pulse generators; stage-by-stage amplifier gain tests; alignment o broadcast receiver IF and RF stages, etc. Size: 12-3/4x7¼x8"D. Shpg wt., 9½ lbs.

B & K–Precision Model E310B .... Net $153.0

Industry Standard Meters

B+K PRECISION

Model 280 3-Digit Hand-Held Digital Multimeter

The first full-feature 3-digit multimeter at an analog price! Features resolution down to 1mV, 1μA, 0.1Ω. Bright 0.3″ non-blinking display; automatic decimal point and polarity. Positive out-of-range indication—all 3 digits of display flash. Has high-low power ohms ranges to measure resistances in solid-state circuits. Input impedance, 10 megs. RANGES: DC/AC voltage, 0-1000mV, 10V, 100V, 1000V; DC accuracy ±1% of read-ng, (1000V, ±2% of reading); AC accuracy, ±2% of reading, 1000V, ±3% of reading). DC/AC current, 0-1000 μA, 10mA, 00mA, 1000mA; accuracy ±2% of reading, ±1% F.S. (1000mA, ±3% of reading). Ohms, 0-100, 1K, 10K, 100K, 1meg, 10 megs; ccuracy, ±2% of reading, ±1% F.S. (10 megs, ±3% of reading). Dverload protection: DC/AC volts, diode and series current limit re-istance; DC/AC current, fuse and diode; ohms, internal to 135VAC. ize, 4-3/8x6-3/8x2″. Uses 4 "C" cells (not supplied) or optional AC dapter/charger. With leads, less carrying case. Shpg. wt., 3 lb.

&K-Precision Model 280 .... Net: $99.95

Model 120P 20,000 Ohms-Per-Volt Volt-Ohm-Milliammeter

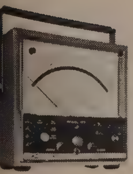
- Resettable electronic overload protection
- .25V and 50 μA DC ranges

Highly accurate, versatile, rugged VOM–one of the most popular in the business. Resettable electronic overload protection prevents accidental destruction of instrument, shunts, multipliers, meter. Protects all ranges except 0-ampere bus bar range. Meter movement is a precision, taut-band, elf-shielding annular type–withstands shock and vibration encountered n heavy day-in and day-out use. RANGES: DCV, 0.25V to 1000V; ccuracy, ±2%, F.S. DC current, 50 uA to 10 A; ±1.5% F.S. on 50 uA ange; 2% on other ranges. ACV, 2.5 to 1000V RMS; accuracy, ±3% F.S. requency response: 0-50 VAC, ±1 dB to 100 kHz; 250 VAC, ±1 dB to 0 kHz. Resistance: Rx1, x100x10,000; center scale, 12 ohms. Also read B. Size, 5-1/8x7x3-1/8" D. Complete with leads and batteries. Shpg. t., 4 lbs.

& K–Precision Model 120P .... Net: $96.00

ODEL LC-12 CASE. For 120P VOM .... Net: $9.00

Model 177 Vacuum Tube Voltmeter



- DC supply for ohms ranges–no ohms battery needed
- 11 megohms input impedance

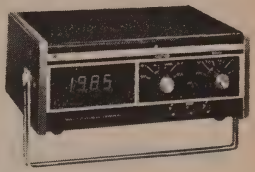
Highly versatile, rugged, "old-stand-by" vacuum tube voltmeter, with built-in DC supply – no ohms battery required. Has 30 ranges: DC/AC/RMS volts; resistance. Separate peak-to-peak and RMS scales. Special calibration on low AC ranges. Reads 0.5V to 1500VDC; 1.5V to 1500VAC. Large 7", mirrored, 100-microamp meter. Input esistance, 11 megohms. Accuracy, 3% on DC, 5% on AC. Supplied with &K PR-43 DC/AC/Ohms test probe, with switch. 7-1/8x7¼x3-5/8". hpg. wt., 8 lbs.

& K-Precision Model 177 .... Net: $107.00

V-1A RF PROBE. Extends freq. range to 250 MHz. 1 lb. Net: $ 13.50

V-2A HIGH-VOLTAGE PROBE. Extends DCV range to 0,000 volts. Wt., 1 lb. .... Net: $ 19.50

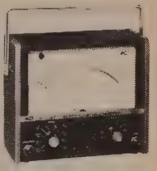
Model 282 3½-Digit Digital Multimeter



The Model 282 VOM features a 3½-digit display, 0.5% accuracy on DC and automatic polarity. Also has 100% overrange capability on all ranges and positive out-of-range indication: first digit shows "1" and remaining digits blank out completely.. Automatic decimal point positioning. 1 mV resolution. Input impedance, 10 megohms, all ranges. RANGES: DC and AC volts, 1-1000 V. Accuracy on DC, ±0.5% of reading, ±1% of reading, ±1 digit, 1, 10, 100 V ranges; 1000 V range, 1.5%; all ±1 digit. DC current, 1-1000 mA. Frequency response: ACV and AC current, 50-200 Hz. Resistance, 100 ohms to 10 megohms. Accuracy, ±1% of reading, ±1 digit, all ranges except 1000V, ±2%. Overload protection: To 250V on ohms; to 3 amps on shunts; to 1500V on volts. Size, 3½x7x9". For 105-125 VAC, 50-60 Hz. 3-wire grounded line cord. With PR-21 probe and leads. Shpg. wt., 5 lbs.

B & K–Precision Model 282 .... Net: $200.00

Model 290 F.E.T. 75-Range Electronic Multimeter



- Hi-Lo power ohms ranges
- 7" meter with 100° scale arc

One of the most versatile multimeters ever designed–75 ranges in all. Hi-Lo power ohms ranges for critical semiconductor circuit testing. 50 mV full-scale sensitivity on both AC and DC. 50 microamp current range. Rx0.1 ohm range with 1 ohm center scale. 15 megohms input impedance for minimum circuit loading. Uses 0.5% precision multipliers. Zener-regulated power supplies. Full protection for meter, F.E.T. input, circuits. RANGES: DCV, 50-1500 V; accuracy, ± 1.5% F.S. ACV, 50-1500V RMS; 10 peak-to-peak ranges; accuracy, ± 3% F.S. through 150 V range; ±5%, 500V, 1500 V ranges. Frequency response: To 150 V range, ±0.5 dB, 20 Hz to 500 kHz; ±3 dB, 5 Hz to 750 kHz. DC current, 50 uA to 1.5A; accuracy, ±3% F.S., except ±4% on 1.5A range. AC current, 50 uA to 1.5A; accuracy, ±4% F.S. except 5% on 50 uA and 1.5A ranges. Resistance: 8 Lo-Power ranges and 7 Hi-Power ranges. Meter has 100 uA movement and mirrored scale. Size, 7¼x8x3-5/8" D. For 105-125 VAC, 50-60 Hz. Shpg. wt., 6 lbs.

B & K-Precision Model 290 .... Net: $151.00

Model 277 F.E.T. Electronic Multimeter

- Lo-Power and Hi-Power ohms ranges for checking semiconductor, IC circuits
- 1μA DC current range
- 1V AC/DC volts scale

Has 7 low-power and 7 high-power ohms ranges – valuable when checking ohms in semi-conductor or IC circuits, 36 additional ranges for measuring AC and DC volts, dC current and dB. Has 1 microamp DC current range for sensitive semiconductor leakage testing. Also has .1 volt AC/DC volts scale, for measuring transitor bias. Reads to 1kV, DC and AC. 100% solid state. FET input, current and resistance circuits overload-protected. 4½" meter has 50μA movement, mirrored scale. Size, 7½x7-7/8x3-5/8". With PR-21 probe; has switchable 100K ohm isolating resistor. Less batteries. Requires 1 "D" cell and 1 NEDA 1604 cell. Shpg. wt. 5 lbs.

B & K-Precision Model 277 .... Net: $102.00

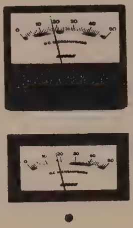
New Beede CERTRAK™ Panel Meters

±1% or ±½% tracking certificate with each meter

Beede is the first panel-meter manufacturer to certify the tracking accuracy of its products. Each Certrak™ meter is shipped with an individually signed certificate of tracking accompanied with a printout of readings taken at every numbered scale division. Certificates of ±1% or ±½% tracking accuracy are available.

New shielded-bar taut-band movement. In conjunction with the new Certrak™ panel meters, Beede announces its new ultra-sensitive shielded-bar taut-band meter movement. All Beede panel meters containing this movement qualify under the Certrak 1% certification program. Sensitivities from 0-10μA to 0-25A are in stock for immediate shipment; stock voltmeters are 0-10mV to 0-300V. Case styles in stock: 3″ and 4″ Designer and Centurion, 6″ Universal (described below).

For complete information, request Bulletin PM-3.



Centurion

Designer

Universal

Other Beede Panel Meters

Centurion Line. 3″ and 4″ durable molded black phenolic with glass window for front-of-panel mounting; 4″ back-of-panel model. Illumination available in 4″ models.

Designer Line. Clear picture-frame design with concave window in 2″, 3″, 4″, and 6″ widths for both front and back-of-panel mounting.

Universal Line. Large, highly visible meter cases in 6″ and 8″ widths for across-the-room reading.

250° Line. Beede's very popular 250° movement for switchboard, automotive, marine applications available as meter movement only (see bottom of next page) or in brass, chrome, or black lacquer case with glass front, 3″ and 6″ diameter.

Edgewise Line. 1½″ and 2½″ models for applications demanding minimum panel space.

QA Line. 1½″, 3½″, and 4½″ cases with concave window, lower portion painted or horizontal ribbed.

Traditional Line. Available in various rectangular and round phenolic cases.

Clear Front Line. 1″, 2″, 3″, 4″ cases for general-purpose panel-meter applications.

For complete information, request Bulletin PM-2.

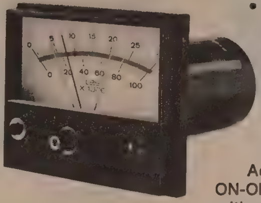
Control Meter-Relays

The Beede non-contacting control-meter relay combines a high-torque d'Arsonval meter with an adjustable photoelectric sensor, switching circuit, and output switch. As the monitored variable passes the adjustable setpoint, an output relay is either energized or de-energized. Either one or two setpoints are available.

Beede's greatly simplified meter-relay design has significantly reduced the number of parts, resulting in price savings up to 50% without a sacrifice of quality features.

Features

- Optical, non-contacting control, continuous indication.
- Standard models available from stock.
- Wide variety of options (power supply, input and output, tamperproof setpoint controls, etc.) for inexpensive customizing.
- Available as single complete unit, or with separate control, or optical element only.
- Inherently fail-safe.
- AC or DC power input.
- Direct-drive set pointers.
- Lamp life in excess of 10 years.
- Meter movement and/or dial custom-designed to your specifications if required.
- Meter permanently free of static influence.
- Attractive, modern "Centurion" case, 3" or 4" wide; 4" model available also for behind-panel mounting.



Specifications

Accuracy ±2% or ±1%.
ON-OFF operation or latching with manual reset.

Output: 5 amp (resistive load) DPDT relay for each setpoint. Solid State Output available.
Standard Deadband is 0.5% nominal.
Power Requirements 105 to 130 Volts AC.
Other AC and DC power inputs available.
Ambient Temperature 40°F to 165°F is standard.

Movements

MAG-BAND TAUT BAND, 0-20μA DC minimum range.
MAG-B PIVOT AND JEWEL, 0-200μA DC minimum range.

For complete information, request Bulletin MR-2.

Pyrometers

NEW Optemp™ pyrometer/meter relay. High-impedance input amplifier delivers high-power signal to meter movement, eliminating need for thermocouple lead-length adjustments and permitting the use of lower-cost light-gage t/c extension wire. Rugged high-torque pivot-and-jewel movement with non-contacting optical switching for fast response, inherent noise rejection, continuous indication.

Standard Optemp models suitable for Types J and K t/c's. Six stocked ranges from 0-300°F to 0-2500°F. Single or double setpoint. Case width 3 or 4 in. All models have electrical cold-junction compensation, t/c break protection. Many options available, including integral bridge circuits enabling use of RTD or thermistor sensing of narrow temperature ranges.

Indicating pyrometers—As "prime source for temperature instrumentation," Beede offers, in addition to the controlling pyrometers described at left, a complete range of indicating panel-meter pyrometers in a wide choice of case styles in widths from 2" to 6". Clear-reading mirror scales eliminate parallax error, and may show both Fahrenheit and Centigrade units.
For complete information, request Bulletin T-1.

Meter Movements

Precision d'Arsonval movements as used in the case styles shown above, or available for installation in customer's case.

Shielded-Bar Taut-Band. Maximum sensitivity and freedom from hysteresis, for measuring extremely low microampere ranges.

Mag-Band Taut-Band. Self-shielded, high-torque, excellent balance, no drift.

Mag-B Pivot-and-Jewel. Rugged, high-torque self-shielded movement.

250°. A fine, sturdy, self-shielded 250° pivot-and-jewel movement, very popular for process-control applications. Available in a choice of mounting arrangements.

Super-Torque™ 250°. Vehicle, heavy machinery, process applications. Thru-shaft design takes push-on pointers, withstands casual handling by untrained personnel. World's ruggedest 250° movement.

AC Iron-Vane (Repulsion). The preferred movement for making direct measurements of AC voltage and current. Better than d'Arsonval movements for AC panel meters.

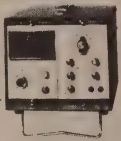
811



DESCRIPTION

Bell Gaussmeters are high quality instruments designed to accurately measure magnetic flux density. Twenty-eight models and one-hundred ten standard field probes meet the demanding requirements of most applications. Accuracies range from ±0.2% FS to ±4% FS. Dynamic ranges are from 0.1 Gauss FS to 100,000 Gauss FS. Outputs are proportional voltages, visual meter indications and BCD.

Bell gaussmeters provide four magnetic field measurement modes. They provide direct measurement of absolute magnetic field density, differential measurement of the difference in magnetic field density at two probe locations, incremental field measurements using an expanded scale, and summation measurements.

GAUSSMETER PROBES

There are 110 different probe models for each gaussmeter model. Each probe is a precision solid-state magnetic field sensor built into a rugged package for accurate, repeatable, stable, field measurements. Models are available for transverse, axial, differential, two-axis, and three-axis measurements with a variety of field ranges, field sensitivities, and physical configurations for each. Calibrated extension cables and high sensitivity magna-probes are also available.

This complete line of Bell gaussmeter probes is a major advantage of Bell magnetic measuring equipment over other manufacturers' equipment. The wide range of gaussmeters and probe combinations meet the demanding electrical and mechanical requirements of virtually all applications.

model	ranges	accuracy	frequency response	output voltage
811 digital gaussmeter	4 ranges, 10 to 100,000 gauss FS	±0.2% FS to 100 kg	dc to 400 Hz	BCD 1 Volt dc FS
810 field monitor	4 ranges, 10 to 100,000 gauss FS	±0.2% FS to 100 kg	dc to 400 Hz	1 Volt dc FS
660 digital gaussmeter	6 ranges, 1 to 100,000 gauss FS	±0.25% FS to 10 kg ±0.5% FS to 30 kg	static and slowly varying	1 Volt dc FS
640 incremental gaussmeter	12 ranges, .1 to 30,000 gauss FS	±0.25% of reading	dc to 400 Hz	1 Volt dc FS 5 Volts dc FS
620 precalibrated gaussmeter	12 ranges, .1 to 30,000 gauss FS	±0.25% of reading	dc to 400 Hz	1 Volt dc FS
615 digital gaussmeter	5 ranges, 10 to 100,000 gauss FS	±0.5% FS	dc to 400 Hz	100 mV dc FS BCD
610 self-calibrated gaussmeter	11 ranges, 1 to 100,000 gauss FS	±0.5% FS	dc to 400 Hz	100 mV dc FS
600 general purpose gaussmeter	6 ranges, 100 to 30,000 gauss FS	±4% FS to 30 kg plus cal. error	dc to 5 kHz	1 volt dc FS

DC AND AC CURRENT SENSORS

DESCRIPTION

FW Bell current sensors are designed to meet the challenging requirements of many different current measurement applications. The sensors are compact non-contact Hall effect devices. The measured current full-scale range may be from *(several amperes)* full-scale to in excess of 40 kA.

The Bell current sensors operate on the principle of Ampere's Law. This principle says that the closed-line integral of magnetic field is equal to the current through the line aperature. Thus, the Bell current sensors function by sensing the magnetic field surrounding a current carrying conductor.

Features:

- Fast responding
- Non-contact operation
- Output voltage isolated from input
- Very low insertion impedance
- Clamp-on feature saves time when making measurements
- Economical
- Minimal distortion from adjacent conductors
- Compact
- Amplified and non-amplified models available

Clamp-on current probe

FREQUENCY COUNTERS—SEMICONDUCTOR TESTERS—PRINTERS—LINE NOISE GENERATORS

PROGRAMMABLE COUNTER-TIMER Model 6401

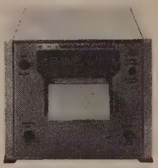
Actually two counters in one, the Model 6401 allows frequency ratio and time interval measurements between 2 signal sources. It features field-replaceable ICs, trigger point monitor lamps and burst frequence measurements. A choice of 3 standard oscillators is offered, with the "O" oscillator standard, and the "L" and "N" oscillators optional. Priced from $1310.00.

INDUSTRIAL COUNTERS AND CONTROLLERS Models 6220A, 6235B and 6240B

Model 6220A is a dual preset controller which is ideal for programming external functions at two separate predetermined count limits. Model 6235B is a direct-count laboratory 5MHz IC counter for industrial use. Auxiliary input-output connector provides external control for remote synchronization. Model 6240B is a direct-count 10MHz 2-channel laboratory IC counter-timer. Measures frequence (0 to 10MHz) period and time interval plus ratio and stability. Priced from $995.00.

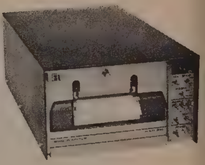
DIGITAL PRINTER MODEL 1454

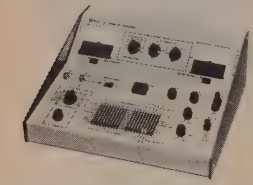
21-column digital printer accepts data in BCD or ten live decimal codes. It features flexible input format, BCD column expansion capability, portability and decimal point, column suppression, and red/black print control. Input levels can be specified at IC levels or transistor levels. Replacement IC is socket-connected and instantly changeable. Priced from $1,155.

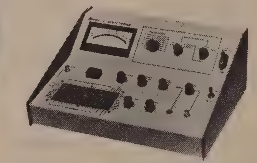


TAPE PRINTER Model 2000B

Features 21-column-BCD, self-reversing ink ribbon, black/red printout, 3 lines per second and floating decimal points. 2 right-hand columns provide 32 different special characters for data identification. Other 19 columns each have 5 special characters plus numbers 0 through 9 and decimal points. Model will record data from digital panel meters, voltmeters, counters, etc. Priced from $995.



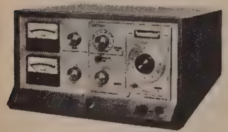




DIGITAL/LINEAR IC TESTERS Models 998 and 999

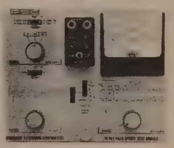
Model 998 is a precision linear integrated circuit tester which checks all important DC parameters including input offset voltage and range, input and bias current, open loop gain, power dissipation and other voltage and current measurements. Model 999 is a digital integrated circuit tester which checks RTL, RCTL, DTL, modified DTL, TTL, LPDTL, CML, and ECL IC's for all important DC parameters. It accepts most types of digital IC packages. Priced from $595.

PSC *A MEMBER OF BERKELEY'S FAMILY*



Model 70 SEMICONDUCTOR TEST SET

Plug-in test modules provide the low-cost Model 70 with the scope and capabilities of a much more expensive test system. The basic unit contains power supplies and metering circuitry for setting u bias conditions. Interchangeable modules slide into and connect within the chassis. $875.00

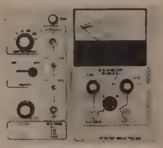


TEST MODULE 10-FET

Measures all basic FET parameters. Types include JFET, D/E, MOS FET. Covers a wide range of test parameters. $975.00

TEST MODULE 10-RF-1

Gives direct read-out of hfe from 3 MHz to 30 MHz. Accuracy is + 10% maximum error. $890.00



TEST MODULE 10-A

Direct read-out of the DC Beta, 0 to 1000. Low duty cycle permits testing up to 30 amps of collector current. $895

TEST MODULE 10-AC-1

Internal 1000-cycle oscillator and tuned voltmeter provide direct read-out of seven hybrid parameters. $695

TEST MODULE 10-B

Direct read-out of saturation voltages at normal operating conditions. Pulsed base current permits up to 30 amps of collector current. $795

TEST MODULE 10-CD

Module-within-a-module design uses 2 plug-ins to the test module itself; one for breakdown voltage; the other for extremely low-leakage measurement. $895

TEST MODULE 10-E

Plug-in program cards provide varied test modes for multi-parameter testing. Six cards are available including breakdown, leakage and saturation tests. $725

TEST MODULE 10-L

Direct read-out of transistor pulsed breakdown in the Latch-Up or Sustained voltage region. Low, variable duty cycle permits measuring high peak currents with nominal junction heating. $875

TEST MODULE 10-Z

Internal 1000-cycle oscillator and tuned voltmeter provide accurate reading of dynamic impedances from 10 to 1000 ohms. Direct read-out. $575

LINE NOISE GENERATOR — MODELS 3020 AND 3021

These instruments offer a controlled method of generating line noise. Inexpensive, they serve a dual purpose: generating a controlled line transient similar to rectifier or SCR noise on the AC line, as well as measuring line noise up to one kilowatt peak. They also generate noise pulses to simulate power line interference up to 10 kilowatt peak power. Noise amplitude and phase position are continuously adjustable from 0 to 600 volts. Pulse rise time is 0.5 microsecond or better. A sweep mode is provided for scanning the noise pulse over the full 360° of line cycle. Model 3020 is priced at $995. Model 3021, which has a special variable pulse rate control, is priced at $1,095.

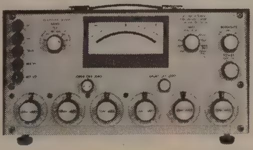
PINHOLE COUNTER — MODEL 6250

Model 6250 Pinhole Counter/Controller provides a 4-decade (5-decade optional) Accumulator, a 3-decade (4-decade optional) Preset Controller and an end-of-coil Reset. It counts number of pinholes in pre-selected length of steel coil or sheet and then, on command, delivers data to Model 1454-21 Digital Printer. Model 6250Counter/Controller combines with Model 1454-21 Printer to provide an accurate system. Model 6250 priced at $1,175. Model 1454-21 Digital Printer is $1,155.

EARLY-WARNING, SHUT-DOWN SYSTEM
MODEL MPS-10B

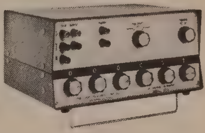
Designed initially as an early warning and shutdown system for motor-pump units used in secondary oil field recovery operations, Model MPS-10B is also ideal for countless other uses. Features monitoring of 8 temperatures, 2 pressures and a vibration switch. Model first alerts operator to trouble, then shuts down equipment. First-out feature pinpoints initial source of trouble. Provides digital readout of temperatures and pressures. Has reset button and manual override switches. Extreme setpoint accuracy. Priced at $1,750.

DIFFERENTIAL VOLTMETERS — MODELS 1000 AND 1002



Provides DC accuracy of 0.002% of reading. Internally guarded input. Input ranges: 1000, 100, 10, 1.0V AC and DC with 10% overranging. 10 microvolt, full scale null detector provides means for zero check. Ratio measurements attainable through 3-position REFERENCE CONTROL (positive, negative, external). Short and open circuit zero functions provided. Six-digit Kelvin Varley Voltage Divider provides resolution of 1 part per million. Model 1000 uses DC only, priced at $1,025. Model 1002 uses AC or DC, priced at $1,450.

DC VOLTAGE CALIBRATORS — MODELS 462 AND 472A

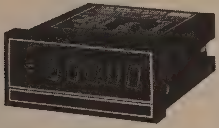


The PSC Model 472A is an adjustable precision DC calibrator, 0-11 volts DC with two ranges. An output current of 20 milliamperes can be drawn on the 11-volt range, a 100:1 precision divider provides a simultaneous output of 0 to 110 millivolts at 10 ohm output resistance. Better than 0.05 microvolts resolution. Operational stability assured through stable zener reference, silicon oil-filled, wire-wound resistors and high gain, wide-band amplifier. Short circuit proof. Model 472 features greater precision, priced at $895. Model 462 priced at $695.

A MEMBER OF BERKELEY'S FAMILY

DIGITAL PANEL METERS

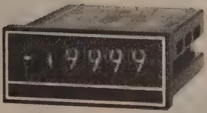
MODEL 386



Model 386 is representative of the Electro Numeric, Inc., line of Digital Panel Meters. It uses the passive integration, dual slope, analog-to-digital conversion technique which provides excellent long-term stability, accuracy, temperature stability, linearity, noise rejection, and jitter-free performance. It features 4-3/4 digits, a full 50,000 count resolution, is pin-compatible with 4-1/2 digit models. The positive true BCD code that is applied to the decoders is also available at the rear of the meter, and can be used for data logging. Model 386 is available with the Beckman display, and is competitively priced.

BECKMAN

Cold cathode, neon-gas-filled. Orange color. 7 segment address format, rugged. 170V excitation. Single-plane display with no gaps.



NIXIE

Cold cathode, neon-gas-filled. Orange color. 10 line decimal address format. Rugged. 170V excitation. Easier to read when display changing.

NUMITRON

Incandescent. 7 segment address format. Bright, white color changeable with filters. Needs only 5V excitation. Single plane display with wider viewing angle.

Model 300 series Digital Panel Meters are available in 3-1/2, 3-3/4, 4-1/2 and 4-3/4 digits. They all feature standard BCD outputs, non-blinking displays, polarity indications and overload indications. Meter retains the last reading indefinitely while "hold" line on the BCD output connector is shorted to common. The meters in the Model 300 series can be mounted either through or behind the front panel. All models in this series are competitively priced.

Some prices slightly higher outside U.S.A.

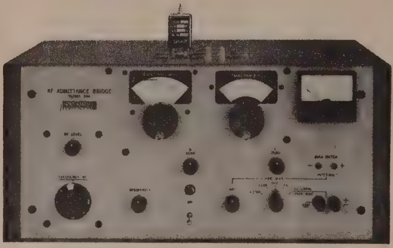
RF Admittance Bridges – 1 MHz to 100 MHz
Model 33 Series

These bridges measure two-terminal parallel capacitance and conductance at 1, 5, 10, 20, 30, 50, and 100 MHz. Other frequencies between 1 and 100 MHz can be provided to special order. Good resolution of low conductance values makes loss measurements possible on many high Q diodes, varactors, and capacitors. The bridge balances accurately with the low test levels required for measurements on most solid state devices. Internal and external dc bias is standard.



SPECIFICATIONS

Model 33A/1

Capacitance: 0-150 pF (30 pF at 100 MHz); resolution, 0.02 pF; basic accuracy, ±0.3%.
Conductance: 0-25 mS; resolution, 0.5 μS or better; basic accuracy, ±2%.

Model 33B/1

Capacitance: 0-150 pF (30 pF at 100 MHz); resolution, 0.02 pF; basic accuracy, ±0.3%.
Conductance: 0-5 mS; resolution, 0.1 μS or better; basic accuracy, ±2%.

Model 33C/1

Capacitance: 0-15 pF; resolution, 0.002 pF; basic accuracy, ±1%.
Conductance: 0-25 mS; resolution, 0.5 μS or better; basic accuracy, ±2%.

Model 33D/1

Capacitance: 0-15 pF; resolution, 0.002 pF; basic accuracy, ±1%.
Conductance: 0-5 mS; resolution, 0.1 μS or better; basic accuracy, ±2%.

Capacitance Range Extensions: Accessories available for measuring higher values of capacitance at frequencies up to 30 MHz for Model 33A/1 and to 20 MHz for Model 33B/1.

Capacitance Bridge – 5 kHz to 500 kHz
Model 75C

The Model 75C is a precise, high resolution bridge which makes measurements of capacitance, conductance, and parallel resistance from 5 kHz to 500 kHz.

Three-terminal remote measurements may be made via shielded cables without incurring errors resulting from stray capacitance from either side of the test to ground. The standard arm of the bridge is also accessible through front panel BNC connectors, permitting use of external balancing capacitors for differential measurements.

A special version, Model 75C-S23, additionally allows the application of externally supplied dc bias up to ±400 V with fusing at 10 mA. It also provides for connection of external ac or dc null detectors to increase balance sensitivity.

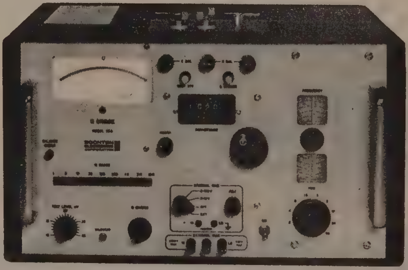
SPECIFICATIONS

Capacitance: 0 to 1000 pF; basic accuracy, ±0.25%; resolution, 0.0002 pF max.
Conductance: 0 to 1000 μS; basic accuracy, ±10%; resolution, 0.001 μS max.
Test Signal: Internally supplied; continuously adjustable in frequency from 5 kHz to 500 kHz; level adjustable from 1 mV to 3 V rms.
DC Bias:
Model 75C: Internal only; –5 to +110 V, adjustable.
Model 75C-S23: Internal; –5 V to +110 V, adjustable. External; to ±400 V.

Q Bridge – 100 kHz to 50 MHz
Model 35A

This unusual, non-resonant, three-terminal bridge measures capacitance and its Q directly over a wide frequency range to Q values as high as 10,000. The low test signal level may be set by a calibrated front panel control, and complete facilities for dc biasing the test component are provided. Measurements of a variety of capacitors and solid state devices such as high Q varactors, diodes, and ceramic and monolithic capacitors are now possible.

Q standards are available to support the accuracy of the bridge. The complete set of six allows Q values of 500, 1500 and 5000 to be checked at 1 MHz, a Q of 1500 to be checked at 20 MHz, and Q's of 500 and 1500 to be checked at 50 MHz.



SPECIFICATIONS

Q: 5 to 10,000; accuracy, generally ±10% to ±30%.
Capacitance: 20 to 1000 pF; accuracy, generally ±0.5% to ±2%.
Test Signal: Frequency, 100 kHz to 50 MHz; level, 10-30 mV rms.
Range Extensions: 2 to 20 pF; 200 to 10,000 pF.
DC Bias: Internal, 0-100 V; external 0-200 V.

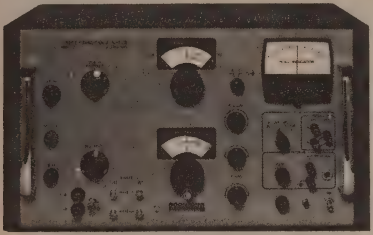
BOONTON

BOONTON ELECTRONICS CORP. ■ RTE. 287 AT SMITH ROAD, PARSIPPANY, N.J. 07054 ■ (201) 887-5110

Capacitance Bridge—1 MHz
Model 75D

This bridge provides 3-terminal measurements of capacitance and conductance allowing remote connection without errors due to stray capacitance to ground. An adapter for 2-terminal grounded measurements is available. Inductance is read by conversion from equivalent capacitance measurement. The null detector is extremely sensitive yet shows balance direction from the most extreme off-range setting. An additional differential detector mode allows capacitance or inductance sorting of components. Internal and external dc bias.

The main capacitance dial consists of a "counter" dial that works in conjunction with a 40:1 vernier dial. This arrangement provides both ease of scanning and great accuracy of fine adjustment. Thus each range, including the lowest 0.1 pF fs range, is spread over 5000 divisions.

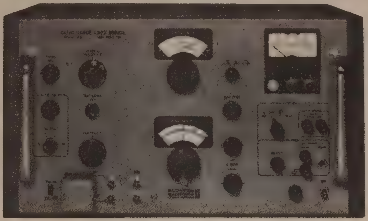


SPECIFICATIONS

Capacitance: 0 to 1000 pF; basic accuracy, ±0.25%; resolution, 0.00005 pF max.
Conductance: 0 to 1000 μS; basic accuracy ±5%; resolution, 0.01 μS max.
Inductance: 25 μH to 25 mH; basic accuracy, ±0.25%.
Test Signal: 1 MHz; level adjustable from 1 mV to 250 mV.
Dual external DC Bias: HI to GND and/or LO to GND; differential, ±400 V max.
Internal DC Bias: HI to LO; −6 to +150 V.

Capacitance Limit Bridge—1 MHz
Model 77B

Performs automatic, high-speed dual or single limit tests, or conventional manual measurements of capacitance or inductance. In automatic mode, test is insensitive to specimen loss. "High", "Low", or "Go" test decisions are indicated by front panel lamps as well as by continuity closures for actuation of material handling equipment. 3-terminal arrangement permits remote measurements at the end of coaxial cables without incurring error due to cable capacitance to ground. Nominal capacitance values are set by the main capacitance balance dial in conjunction with its multiplier switch. A multi-turn control and range switch are used to program the desired tolerance. Operates with low test level. Built-in dc bias supply; provision for external bias.



SPECIFICATIONS

Capacitance: Automatic, 0 to 1000 pF with 0.001 pF resolution max.; Manual, 0.0001 pF resolution max.; basic accuracy, ±0.25%.
Inductance: Manual or automatic, 25 μH to 25 mH; basic accuracy, ±0.25%.
Tolerance Limits: ±0.0005 pF to ±200 pF; basic accuracy, ±0.25% of limit setting.
Test Time: Approx. 50 ms.
Conductance: (Manual only) 0 to 1000 μS; basic accuracy, ±5%; resolution, 0.01 μS max.
Test Signal: 1 MHz, 250 mV to 15 mV rms for automatic mode, to 1 mV rms for manual.
Decision Output: Green, red, and amber panel lamps; continuity contacts.
DC Bias: Internal, −6V to +150 V; external, to ±400 V.

Automatic 1 MHz Capacitance Bridge
Model 76A

The new Model 76A combines established precision bridge techniques with an automatic balancing system and internal computing facilities. It makes fully automatic and programmable 1 MHz parallel capacitance and conductance measurements. The bridge will also compute and display equivalent series capacitance, series resistance, dissipation, and Q of the test. Any capacitance measurement can be internally stored and subsequent measurements displayed as a change in capacitance or as a percentage change in capacitance versus the stored value. Independent ranging of capacitance and loss can be manually selected or autoranged. An entry mode allows double-duty operation of panel buttons. In this mode the user can digitally program and display dc bias voltage, digitally program into storage a reference capacitance value for deviation measurements, and command automatic zero offset correction and test cable length correction. Test level is adjustable over a 5 to 200 mV range. Versatile data interfacing options are available.

SPECIFICATIONS

Capacitance: 0-2000 pF in 4 ranges
0-1.999 pF, 0-19.999 pF, 0-199.99 pF, 0-1999.9 pF.
Basic Accuracy: ±(0.1% rdg + 1 digit).
Conductance: 0-2000 μS in 4 ranges
0-1.999 μS, 0-19.99 μS, 0-199.9 μS, 0-1999 μS.
Basic Accuracy: ±(2% rdg + 1 digit).
Test Frequency: 1 MHz.
Test Level: 5-200 mV, adjustable.
Test Time: < 100 ms, C > 2 pF, G > 2 μS.
Display: Dual digital readout, decimal points, units, mode, active ranges.
Display Modes: C_p, C_s, ΔC, $\Delta\%$, G, R_p, R_s, D, Q.
Autoranging: Standard.
Trigger Modes: Continuous (1 per sec), manual, external.
Remote Programming: Standard, TTL.
Data Output Options: ASCII Bus, parallel BCD, or BCD serial by bit, isolated.
DC Bias: Internal, 0 to 100 V bipolar; external to ±200 V.

Capacitance Meters – 1 MHz
Model 72 Series

The Model 72 Series of solid-state capacitance meters provide rapid, accurate, three-terminal measurements of capacitance, particularly of semiconductor devices because of the low test level employed (15 mV rms), and the provision for application of dc bias to the test.

The phase-sensitive detection system allows the capacitance of even low Q devices (as low as Q = 1) to be measured with little reduction in accuracy. Range switching is accomplished by a combination of logic-controlled reed relays and diodes. Range selection is by front panel switch or remote TTL inputs.

Both models provide a highly linear, high-speed, dc analog voltage output corresponding to the meter or display indication. In addition, the 72BD has BCD outputs, TTL compatible. Autoranging of this model is standard.

Adapters are supplied for coaxial-cable connection to a remote test fixture, and for direct attachment of wire-lead components.

TEST

SPECIFICATIONS

Digital Model 72BD

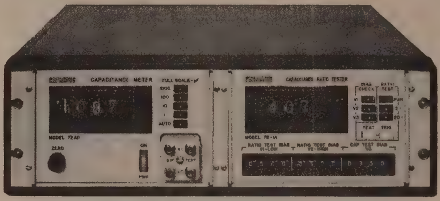
Capacitance Ranges: 2.000, 20.00, 200.0, 2000 pF fs.
Basic Accuracy: ±(0.25% rdg +0.2% fs).
Display: LED-type, 4 digits.
Data Outputs: Serial by digit, TTL.
Commands: Range (4 lines); manual disable; autorange enable; encode hold, encode trigger; TTL.
DC Output: 2 V for fs all ranges; linearity ±(0.1% rdg +0.005% fs). Response time < 2 ms.
Test Signal: 1 MHz, 15 mV rms.
DC Bias: External ±600 V max.
Autoranging: Standard, 100 ms per range.
Options: 100 mV test level, BCD serial/parallel converter.

Analog Model 72B

Capacitance Ranges: 1, 3, 10, 30, 100, 300, 1000, 3000 pF fs.
Basic Accuracy: ±(0.5% rdg + 0.5% fs).
Resolution: 0.5% fs for each range.
Meter: 4½ inch taut-band type.
Commands: Range (8 lines); manual disable; TTL.
DC Output: 1 V for fs (1 series ranges); 3 V for fs (3 series ranges); linearity, ±(0.1% rdg +0.01% fs); response time <1 ms.
Test Signal: 1 MHz, 15 mV rms.
DC Bias: External ±600 V max.
Option: 100 mV test level.

Capacitance Ratio Meter
Model 172A

Measures capacitance ratio and capacitance value at accurately preset bias levels. Within 0.5 s results are displayed on two 3½ digit readouts. All functions, ranges and bias voltages are externally programmable. BCD outputs are provided for ratio and capacitance.

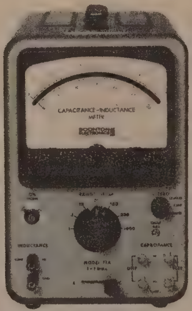


SPECIFICATIONS

Capacitance Ranges: 1.999, 19.99, 199.9, 1999 pF fs.
Ratio Ranges: 1.999:1 and 19.99:1 fs.
Ratio Accuracy: (Ratio/20)% +0.025 (C_r/C_2)% ±1 digit
Where: C_r = full scale of the capacitance range on which the higher capacitance (C_1) is measured.
C_2 = smaller capacitance valued measured.
Test Signal: 1 MHz, 15 mV rms.
Displays: Nixie-type, 3½ digits.
Measurement time: < 500 ms.
DC Bias:
Full Scale: 1.999, 19.99, 199.9 volts.
Accuracy: ±(0.03% rdg +100 μV).

Capacitance/Inductance Meter – 1 MHz
Model 71A

Quick, convenient, direct reading, 3-terminal measurements of capacitance and 2-terminal measurements of inductance at 1 MHz. Operates with low test signal level, permitting semiconductor tests. Provision for dc bias. Linear dc output proportional to capacitance or inductance reading for display on dvm, x-y plotter, etc.



SPECIFICATIONS

Capacitance: 1 pF to 1000 pF fs in 7 ranges; basic accuracy, ± (0.5% rdg. + 0.5% fs); resolution, 0.25% fs, Q > 3.
Inductance: 1 μH to 1 mH fs in 7 ranges; basic accuracy, ±0.5% rdg ±0.5% fs.
Test Signal: 1 MHz; 15 mV rms for C, < 1 mV for L.
DC Bias: External ±200 V; (±600 V to special order).
DC Analog Output: 0 to 100 mV or 300 mV fs depending on range numerics; response time < 10 ms; (1 ms to special order).

BOONTON

BOONTON ELECTRONICS CORP. ■ RTE. 287 AT SMITH ROAD, PARSIPPANY, N.J. 07054 ■ (201) 887-5110

C/V Plotting Systems
Model 179 Series

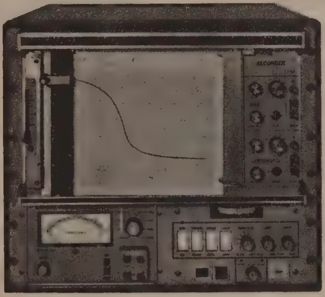
Model 179B is a 1 MHz capacitance measuring and recording system which automatically traces capacitance/voltage data on removable pen-recorded X-Y plots. It is designed primarily for recording C/V data on MOS wafers and varactor diodes. Properties of the metal-insulator-semiconductor (MIS) structure, such as doping profiles, impurity concentrations, spatial variations, etc., may readily be obtained. With varactors, the system provides graphic measurements of capacitance, capacitance ratio, and tracking characteristics. Normal and inverted ramp voltages, together with single and dual ramp functions, are available. Automatic or step, linear or log modes may be selected.

Two ramp voltage ranges of 0-20 V and 0-200 V at speeds from 0.5 V/sec. to 25 V/sec. are provided.

Model 179D is a 179B plus a module that allows connection of up to nine separate test inputs. Any one of the nine may be selected for plotting while a soak voltage of up to ±100 V dc is impressed on the other eight channels.

To plot C/V characteristics at other than room temperature the 179B or 179D can be operated in conjunction with a "hot-chuck" system (available from other manufacturers.) Typically the chuck is heated or cooled by a fluid passed to it through flexible pipes from a control unit. Wafers are placed on the chuck which acts as the mounting surface beneath a prober.

Oversize cabinets are available to accommodate the "hot chuck" control unit.



Capacitance Classification Systems
Model 170 Series

The 170 Series is designed to control component handling equipment for high-speed testing of capacitors.

The Series is based on two control units: one for high-accept-low limit testing, and one for up to eight accept zones plus high and low reject limits for multi-category sorting. Either control unit can be combined with a 1 kHz or 1 MHz capacitance measurement module to form a complete system. If the 1 kHz module is chosen, additional sorting can be done according to a pre-set dissipation limit.

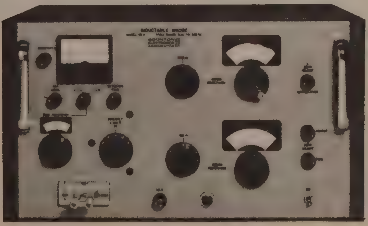
The 1 kHz module measures capacitance from 10 pF to 10 μF and DF from 0.001 to 0.1. The 1 MHz module measures capacitance from 0.1 pF to 1000 pF. Accuracy is typically 0.25% of reading. Each has an analog meter for measurement readout.

Nominal capacitance values, tolerances or categories in ±%, and maximum 1 kHz dissipation factor are programmed on the front panel of either control unit. Decisions are displayed by panel lights and mercury wetted relay closures provide electrical outputs for connection to a mechanical component handler. Limit decisions are made within 70 ms, multi-category decisions within 70 to 150 ms.

The 170 Series can be operated in either a continuous or a manual mode. In the continuous mode, the interrogation of the unknown and display of test results are on a free-running basis. In the manual mode, a test and display cycle is performed each time a start test signal is received; the display remains clamped until the completion of the succeeding triggered cycle.

Inductance Bridges
Model 63

These unique bridges provide direct-reading measurements of series inductance down to unusually low values with fractional percentage accuracy over broad frequency ranges. Series resistance is also directly measured. Each bridge is complete with built-in oscillator and detector. Test current does not change during balance.



SPECIFICATIONS

Model 63H

Inductance: 0.2 nH to 110 mH; basic accuracy ±0.25%.
Series Resistance: 0.2 mΩ to 11 kΩ; basic accuracy ±3%.
Test Signal: Frequency, 5 to 500 kHz; level, 3 V rms max.

Model 63L

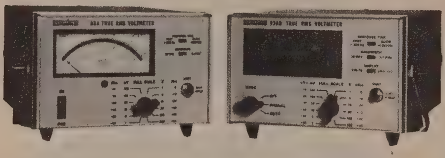
Inductance: 20 nH to 11 H; basic accuracy ±0.25%.
Series Resistance: 10 mΩ to 110 kΩ; basic accuracy ±3%.
Test Signal: Frequency, 0.4 to 40 kHz; level, 5.5 V rms max.

Model 63M

Inductance: 2 nH to 1.1 H; basic accuracy ±0.25%.
Series Resistance: 2 mΩ to 110 kΩ; basic accuracy, ±3%.
Test Signal: Frequency, 1 to 100 kHz; level, 5.5 V rms max.

True RMS Voltmeters
Model 93

The Boonton 93A and 93AD voltmeters are true rms responding instruments that use backward diodes as balanced, low-level, square-law detectors. An all solid-state chopper amplifier and unique operational square-root circuitry convert the squared function to a high-level dc proportional to rms. This dc voltage is available at rear terminals for rms converter applications, and is displayed on an analog meter in the case of the 93A or on a 3½ digit LED display for the 93AD. The 93A and 93AD both cover twelve ac voltage ranges from 1 mV to 300 V full-scale. The 1 mV full-scale range provides unmatched sensitivity to measure the low rms level of noise and of low duty cycle pulse trains. Both rms voltmeters feature a full 10 Hz to 20 MHz frequency range usable down to the lowest voltage range. A three dB bandwidth of 30 MHz assures accurate rms measurements of complex voltages with significant high frequency energy components, such as narrow pulses and wideband noise. The 93A meter is calibrated with dBm as well as voltage scales. The 93AD has, as standard, an edge-mounted dBm analog meter in addition to the digital display; an optional dB display provides readings directly in dB with 0.01 dB resolution.



SPECIFICATIONS

Analog Model 93A

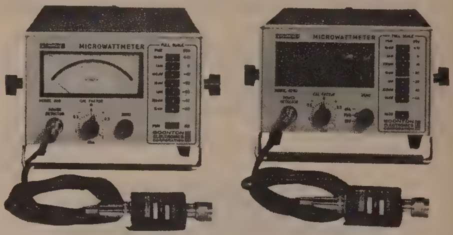
Voltage Range: 1 mV to 300 V fs, in 12 ranges.
dBm Range: –68 dBm to +52 dBm (600 Ω ref.).
Selectable Frequency Range: 10 Hz to 20 MHz or 10 Hz to 100 kHz.
Basic Accuracy: ±1% fs or ±2% rdg, whichever is better.
Indicator: 4½" taut-band meter; scales 0-3, 0-10 and dBm.
Response Time: Fast; 1 sec. Slow; 4 sec.
Crest Factor: 6 at full scale; 18 at down scale.
Input: *Impedance:* 2 MΩ, < 25 pF.
Equivalent noise: < 35 μV.
DC Output: +10 V for fs.
Remote Control: All functions and ranges commanded with TTL input.
Options:
Rear signal input.
50 Ω dBm reference.
75 Ω dBm reference.
Accessory: 93-1A High-Z probe; 10 MΩ,< 11.5 pF, attenuation 10x.

Digital Model 93AD

Voltage Range: 1 mV to 300 V rms fs, in 12 ranges.
dB Range: 120 dB; resolution, 0.01 dB (optional).
Selectable Frequency Range: 10 Hz to 20 MHz or 10 Hz to 100 kHz.
Basic Accuracy: ±(1% rdg + 1 count) for voltage.
±0.3 dB for dB option.
Display: 3½ digit LED display (4 digits for dBm). Decimal point, units (V, mV, dB), under- and over-range, polarity (dBm only) also indicated. Analog edgemeter, scaled over 12 dB range.
Response Time: Fast; 1 sec. Slow; 4 sec.
Crest Factor: 6 at full scale; 18 at down scale.
Input: *Impedance:* 1 MΩ, < 25 pF.
Equivalent noise: < 35 μV.
Outputs: BCD (serial) digits, binary range and mode information.
DC Output: 10 V for fs.
Remote Control: All functions and ranges commanded with TTL input.
Options:
Autoranging.
Rear signal-input.
50 Ω dBm display.
75 Ω dBm display.
600 Ω dBm display.
BCD serial/parallel converter
Accessory: 93-1A High-Z probe; 10 MΩ, < 11.5 pF, attenuation 10x.

RF Microwattmeters
Model 42

Models 42B, 42BB, and 42BD are analog, analog-battery, and digital versions of the rf microwattmeter. They are exceptionally stable and sensitive units which cover a 70 dB dynamic range measuring power down to 1 nanowatt and withstanding cw overloads to 0.3 watts. Power detectors may be operated many hundreds of feet away from the power meters without deterioration of accuracy or stability. Drift problems common in other types of power meter are virtually eliminated. Three coaxial 50 Ω power detectors cover frequency ranges of 200 kHz to 7 GHz, 200 kHz to 12.4 GHz and 200 kHz to 18 GHz. In addition,a 75 Ω unit covers from 200 kHz to 1 GHz for CATV applications. Analog models are scaled in power and dBm. The digital model has an LED display that uses 3½ digits for power and 4 digits for dBm (0.01 dB resolution). Unique applications are field alignment of microwave antennas and long term power alarm monitoring in satellite communications systems.



SPECIFICATIONS

Digital Model 42BD

Power Range: 10 nW fs to 10 mW fs.
Frequency Range: 200 kHz to 18 GHz.
Accuracy: Overall, instrument and detector.
±(0.2 dB + 1 digit) to ±(0.8 dB + 1 digit) depending on power range and frequency.
Stability: <1 nanowatt/hour at 25°C
Temperature Effect: 0.007 dB/ °C typ.
Indicator: 3½ digit LED display for power, 4 digit for dBm option.
Data Outputs: BCD (serial) digits, binary coded range, overrange, underrange, encode complete, TTL.
Remote Control: Input range, encode hold and trigger, manual disable, dBm and autorange commanded by TTL inputs.
DC Output: 10 V fs proportional to power.
Major Options: Autoranging, dBm display, BCD serial/parallel converter.

Analog Model 42B

Power Range: 10 nW fs to 10 mW fs.
Frequency Range: 200 kHz to 18 GHz.
Accuracy: Overall instrument and detector.
±(0.2 dB + 0.5% fs) to ±(0.8 dB + 1.0% fs) depending on power range and frequency.
Stability: <1 nanowatt/hour at 25°C
Temperature: Effect: 0.007 dB/ °C typ.
Indicator: 4½ inch taut band meter calibrated power and dBm.
Remote Control: Input range and manual disable commanded by TTL inputs.
DC Output: 10 V fs proportional to power.
Major Options: Meter scale and dc output linear with dBm. Rear input.

Analog Battery Model 42BB

Specifications same as 42B. Sealed lead-acid rechargeable 6 hour battery.

Power Detectors

41-4A	200 kHz – 7 GHz, 50 Ω input	Connector: Precision type "N" standard, APC-7 optional
41-4B	200 kHz – 12.4 GHz, 50 Ω input	
41-4C	200 kHz – 1 GHz, 75 Ω input	
41-4E	200 kHz – 18 GHz, 50 Ω input	

BOONTON

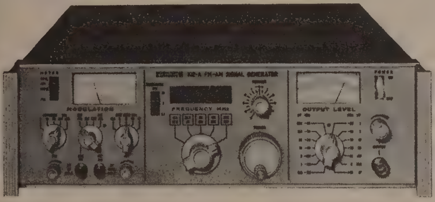
BOONTON ELECTRONICS CORP. ■ RTE. 287 AT SMITH ROAD, PARSIPPANY, N.J. 07054 ■ (201) 887-5110

FM/AM Signal Generator – 4.3 to 520 MHz
Model 102A

The 102A FM/AM Signal Generator is a well shielded, low noise source from 4.3 to 520 MHz that is both stable in frequency and accurate in level. Warmup time for most purposes is only 15 minutes and weight has been shrunk to 30 lbs. The front panel is designed to be easy to use and understand and all specifications are located on the top of the instrument for convenient reference. An adjustable "feel" main tuning drive brings smoothness and ease to narrow-band receiver setting.

Some of the main features are an excellent residual FMspecification, 100 Hz resolution on a 6 digit frequency display, individual metering of modulation and RF output, true peak monitoring of AM level and FM deviation, 0-300 kHz internal FM deviation on all bands and external FM deviations as wide as 2 MHz p-p even at the lowest carrier frequency.

Special options are available for NAV/COM applications.



SPECIFICATIONS:

FREQUENCY –
Ranges: 4.3-37.5, 32.5-65, 65-130, 130-260, 260-520 MHz
Accuracy: ±(100 Hz + 5 ppm).
Stability: Typically < 2 ppm/10 min. after 1 hour.
(Stable ambient conditions.)
Residual FM: Bands 2-5, < 0.25 ppm peak (20 Hz to 15 kHz); band 1, < 20 Hz peak.
Display: Six digit LED; resolution 100 Hz, 1 kHz and 10 kHz.

RF OUTPUT –
Power Level: −130 dBm to +13 dBm.
Attenuator: 13 steps, 10 dB/step, plus variable 13 dB.
Accuracy: ±2 dB max.
Leveling: ±0.5 dB.
Spurious Output: > 30 dB down.
Impedance: 50 Ω; VSWR < 1.5:1.

FREQUENCY MODULATION –
Deviation: 0 to 300 kHz in five ranges.
Accuracy: ±10% fs.
Bandwidth: DC to 200 kHz.
Distortion: Bands 3, 4, 5: < 1% THD at 100 kHz peak dev.
Bands 1, 2: < 2% THD at 100 kHz peak dev.

AMPLITUDE MODULATION –
Percent: 0 to 100.
Calibrated Ranges: 30%, 100% fs.
Bandwidth: DC to 20 kHz.
Distortion (at 1 kHz rate): < 1% THD at 30% AM;
< 2% THD at 70% AM (typically < 3% THD at 90% AM).

INTERNAL MODULATION –
Frequencies: 400 Hz, 1, 3, 10, 19 kHz
Accuracy: ±3%
Distortion: 0.3%

MAJOR OPTIONS:
Ext. clock input, special modulation frequencies, NAV/COM version, fused rf output, accessory frequency doubler.

RF Millivoltmeters
Model 92

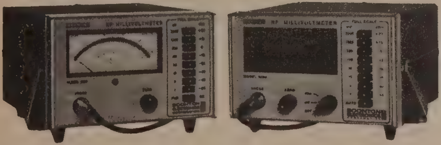
Available in three versions, these rf millivoltmeters offer the best choice for sensitive, wide-band, accurate rf voltage measurements.

a) Model 92B, a programmable analog version, has a large mirrored scale meter with linear 0-3 and 0-10 voltage ranges, a dBm scale (1 mW into 50Ω) and dc output.

b) Model 92BD, a programmable LED digital version, has 4 digit display, serial BCD data outputs, dc output, optional dB display (0.01 dB resolution) and autoranging.

c) Model 92C, a low cost analog version, saves by eliminating programming, dc output, the lowest voltage range (1 mV fs) and working to a more modest accuracy specification.

All models are supplied with rf probe, 50 Ω BNC adapter and probe tip. Many optional accessories extend their capability for other measurements.



SPECIFICATIONS
Analog Model 92B

Voltage Range: 200 μV to 3 V (300 V up to 700 MHz with divider). Useful indications down to 100 μV.
Frequency Range: 10 kHz to 1.2 GHz.
Basic Accuracy: ±(1% rdg + 1% fs).
Indicator: 4½" taut-band meter; scales 0-3, 0-10 and dBm.
Remote Control: All functions and ranges commanded by TTL inputs.
DC Output: 10 V fs.
Options: Many scale variations, other dB references, rear input.

Digital Model 92BD

Voltage Range: 200 μV to 3 V (300 V up to 700 MHz with divider).
Frequency Range: 10 kHz to 1.2 GHz.
Basic Accuracy: ±(1% rdg + 1% fs).
Display: 4 digit LED, reads 1000 fs for "10" ranges and 3000 fs for "3" ranges. Small analog meter to right of display is scaled in dBm.
Data Outputs: BCD (serial) digits, binary coded range information. Overrange, underrange, encode complete.
Remote Control: All functions and ranges commanded with TTL inputs.
DC Output: 10 V fs.
Options: Autoranging, digital dBm readout (0.01 dB resolution), other dB references, rear input, BCD serial/parallel converter

Model 92C

Voltage Range: 500 μV to 3 V (300 V up to 700 MHz with divider).
Frequency Range: 10 kHz to 1.2 GHz.
Basic Accuracy: ±(1% rdg + 2% fs).
Indicator: 4½" taut-band meter; scales, 0-3, 0-10 and dBm.

DIGITAL MULTIMETERS MULTIMETER/COUNTERS

5½ Digit Multimeters

CIMRON
DMM 50

DMM 50

- 20 readings/second with 60 dB NMR
- 1 μ volt sensitivity on DC
- 10 μ volt sensitivity on AC
- 1 milliohm sensitivity on ohms
- AC-true RMS or averaging
- Auto zero
- Parallel and serial Data outputs
- Remote Control

CIMRON
DMM 51
DIGITAL MULTIMETER

DMM 51

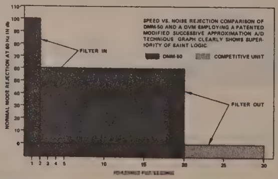
- 1 μ volt sensitivity on DC
- 1 μ volt sensitivity on ratio
- 10 μ volt sensitivity on AC
- 1 milliohm sensitivity on ohms
- AC-true RMS or averaging
- 4-wire bipolar ratio option
- Isolated data outputs
- Full input protection

MODEL DMM 50 5½ DIGIT MULTIMETER

The DMM 50 meets the need for high speed and high accuracy in the presence of normal and common mode noise. Its high accuracy fulfills the requirements of a data acquisition system meter while its low price matches the cost-conscious considerations of routine bench applications.

The DMM 50 employs "SAINT" logic which is a blend of successive approximation (SA) logic and integration (INT) logic. The "SA" provides the high speed and accuracy and the "INT" provides the inherent noise rejection. The result is 20 readings/second with 60 dB of noise rejection.

The basic DMM 50 provides DC volts and DC/DC ratio with 1 μ volt sensitivity. Prior to each measurement, the unit is automatically zeroed providing essentially drift free operation. To increase the capability of the DMM 50 a long list of options are available. These may be added in the field or ordered with the instrument. Among these options are: AC volts, average or true RMS responding; Ohms with 1 milliohm sensitivity; current shunts; high voltage probe; remote control; and data outputs which are addressable in both paralled and serial-character. The flexibility of the data outputs make the DMM 50 equally compatible with computers or printers. Special interfaces are available.



MODEL DMM 51 5½ DIGIT MULTIMETER

The DMM 51 is the best price vs. performance 5½ digit meter available. It is the first 5½ digit autoranging full capability, multimeter to break the established price barrier. Maximum use of LSI technology coupled with practical engineering design has resulted in the lowest possible parts count and a substantial reduction in hand soldered connections. The result is a lower cost highly reliable instrument with accuracy and stability second to none. The basic unit provides DC volts and DC/DC 3-wire ratio capability with sensitivity of 1 μ volt. In addition the functions of AC volts (averaging), Ohms with sensitivity of 1 milliohm, and AC/DC ratio may be added. If the requirement is for true RMS AC, it may be substituted for the averaging type at additional cost. The Ohms function is protected against inadvertent application of voltages of up to ±300 volts DC or peak AC on all ranges. The open circuit voltage of the Ohms converter is limited to less than 5 volts so that voltage sensitive devices such as integrated circuits may be measured without damage to the device. The autozero circuitry of the DMM 51 insures drift free operation.

Other options are: 4-wire bipolar ratio; current shunts; high voltage probe; and data outputs.

The DMM 51 uses an aesthetically pleasing gas discharge planar display that permits easy viewing from a 130° angle. Unlike the narrow band spectral response of red LED displays, the wide band orange of the DMM 51 display minimizes eye fatigue and delivers a large bright numeral that can be seen from a long distance even in high ambient light levels.

An exclusive Cimron servicing convenience is a step-by-step calibration procedure imprinted on the underside of the top cover. Since accurate calibration cannot be made without a shield, access ports are provided through all shields with proper identification.

DIGITAL MULTIMETERS MULTIMETER / COUNTERS

MODEL DMM 40
4½ DIGIT AUTORANGING MULTIMETER

The DMM 40 is equally at home in bench or systems applications. It provides the measurement functions of DC and AC volts, DC and AC current and resistance with a resolution of 0.005% due to the 100% overrange capability. The autoranging and auto-zero features of the DMM 40 increase productivity by eliminating the need to manually range the instrument and the need to frequently zero the input.

The unique input circuitry of the DMM 40 protects the instrument from misapplication. The most common failure of digital multimeters is the result of applying voltage to the input when the unit is in the resistance measuring mode. The DMM 40 is protected against inputs of up to ±300 volts DC or peak AC on any range when the resistance mode is selected. Input protection in the current mode is provided by means of a self-resetting thermal switch. Optional, plug-in, accessories include isolated data outputs, high voltage probe, additional current ranges, and battery pack.

MODEL DMM 42
4½ DIGIT AUTORANGING MULTIMETER

The basic DMM 42 provides 6 automatically selected ranges of DC volts, with sensitivity of 1 μ volt and resolution of 0.005%, as well as data outputs and remote control. Through the use of plug-in options, the measurement capability may be increased to include 9 automatically selected ranges of resistance and/or 4 ranges of AC volts. The resistance function covers a range of 0.1 milliohm to 200 megohms and is a true 4-wire configuration. The AC volts option affords the choice of either average or true RMS responding converters. Full input protection and auto zero is provided on all functions and all ranges. When combined with a scanner and a recording device, the DMM 42 provides the answer to the requirement for a versatile, wide range, automatic, low-cost, data acquisition system.

In that remote control is a standard feature of the DMM 42, an option is offered which affords finger tip control of functions, range, and trigger control. This command module option may be located in a position which is convenient to the operator eliminating the need to reach across work areas to select ranges and functions. Considerable savings in time and the reduction of industrial accidents, through the use of this option, effects large cost savings while increasing productivity. Additional options include current shunts, and high voltage probe.

DSM 44
AUTORANGING 4½ DIGIT SYSTEMS METER

This truly unique instrument provides flexibility of programming such that it will take 20-30 readings per second including range and/or function changes. Competitive units which claim similar speeds are generally limited to 1 or 2 readings per second when range and/or function changes are required. To simplify programming the DSM 44 automatically performs many tasks which must be programmed externally on other units. An example of this is the automatically programmed settling times (i.e., on AC at 400 Hz and above, the time from application of signal and program to full accuracy display is equal to or less than 150 milliseconds).

Another user oriented feature of the DSM 44 is its false program protection. If an incompatible range and function or a function that is not installed is programmed, the DSM 44 will go into a self-protect mode and indicate both on the front panel and in the output data that the misprogram has occurred.

The basic DSM 44 measures DC volts and DC/DC ratio. To increase its capability various options are offered including AC volts (average or true RMS responding), resistance, 4-wire bipolar ratio, parallel, serial or binary data outputs, parallel or serial remote control, current shunts, and high voltage probe.

4½ Digit Multimeters

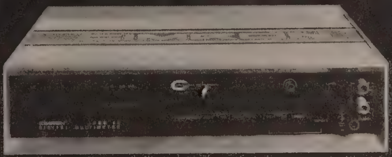
CIMRON DMM 40 DIGITAL MULTIMETER

DMM 40

- 5 functions, 20 ranges, autoranging
- Input protected, auto zero circuitry
- High noise rejection
- 10 μ volt sensitivity
- AC and DC current
- Optional battery pack
- Optional data outputs

DMM 42

- 6 ranges of DC volts
- 9 ranges of resistance, 0.1 mΩ-200 MΩ
- AC-true RMS or averaging
- Autorange — all functions
- Data outputs, remote control, standard
- 1 μ volt sensitivity, auto zero
- Input protected



DSM 44

- 20-30 readings per second
- Full input protection
- Unique high speed programming
- Unique false program protection
- AC/AC ratio
- Auto zero circuitry
- Parallel, serial and binary outputs
- 5 ranges of DC volts and DC/DC ratio
- Averaging or true RMS AC volts
- Resistance measurements
- Fully systems oriented

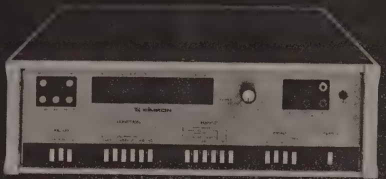
DIGITAL MULTIMETERS MULTIMETER / COUNTERS

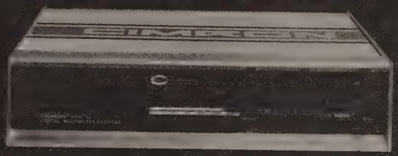
4½ Digit Multimeter
(High Speed)



6653A

- 1000 readings per second
- ± 1 digit accuracy
- DC volts and DC ratio
- AC true RMS or averaging
- Ohms/millivolt option
- Sample and hold option
- 6 print options
- Remotely programmable

4½ Digit Multimeter/Counters



DMC 45

- 6 functions — 32 ranges
- 5 ranges AC and DC volts
- 6 ranges resistance
- 6 ranges frequency, 10 Hz to 20 MHz
- 5 ranges AC and DC current
- 300% overrange
- Optional data outputs
- Optional battery pack — 8 or 16 hrs.

8421

- 4 functions — 17 ranges
- Frequency to 10 MHz
- 4 ranges AC and DC volts
- 5 ranges resistance
- Autorange all functions
- Auto zero
- Optional data outputs

MODEL 6653A
4½ DIGIT MULTIMETER

The 6653A is ideally suited for high speed data acquisition applications. Capable of reading rates of up to 1000 per second, this unit enjoys broad application in high speed data gathering and waveform digitizing applications. When equipped with its Sample-and-Hold option, digitizing of transient signals and peak values may be effected.

The high sampling rate of the 6653A is achieved through the use of an advanced linear amplifier with unusually short settling time and an IC successive approximation logic design.

Features of the standard 6653A are: DC volts and DC/DC ratio; 3 position filter, 6 month accuracy of ±1 digit, out-of-range indication, variable sampling rate and automatic polarity indication. The input signal leads are floating and isolated from the case, power line ground and print output. Options include: AC volts, averaging or True RMS; Ohms/millivolts; automatic ranging; remote control; and isolated data outputs.

The remote control option permits remote selection of all controls on the front panel including function, range, decimal location, sensitivity, filter, printout, energizing of external reference and energizing auto-desensitizing and trigger rate when the instrument is in Repetitive Mode. When in remote control, front panel controls are locked out, thus preventing the loss of data due to inadvertent operation of a front panel control.

MODEL DMC 45
4½ DIGIT MANUAL RANGING MULTIMETER/COUNTER

The low-cost DMC 45 combines all of the most useful measurement functions in a single compact unit. This state-of-the-art instrument has a multifunction input cable which afford the operator an error-free method of making fast precision measurements in a variety of applications. With 300% overranging capability, the DMC 45 provides resolution of 0.0025%. With 40,000 count capability, it is an extremely efficient production test instrument due to the fewer number of range selections required of the operator.

The basic DMC 45 provides functional capability of DC and AC volts, DC and AC current, resistance and frequency counting from 10 Hz to 20 MHz with resolution of 0.01 Hz on the lowest range. Through the use of a phase lock system on the two lower ranges, the need for a 10 or 100 second time base, required by other counters when measuring frequencies below 100 Hz, is eliminated. The phase lock system provides low frequency capability through a direct counting function rather than a computation based on the period of the input signal.

This 32 range multimeter may be expanded, through options, to include high voltage probe, battery operation and data outputs. Battery operation of up to 8 hours or 16 hours is available as an option.

MODEL 8421
4½ DIGIT AUTORANGING MULTIMETER/COUNTER

The 8421 combines many of the features of the DMC 45 with the convenience of automatic range selection — even on frequency measurements. This 4 function, 17 range instrument provides measurement capability of DC and AC volts, resistance and frequency to 10 MHz. With 100% overranging. The 8421 provides resolution of 0.005%. The unit is fully input protected and performs an automatic zero correction prior to each measurement. When equipped with its optional data outputs, the 8421 is ideally suited to laboratory, production, quality control, and field applications, both as a bench instrument and as a systems component. Other options to the 8421 include current shunts and a high voltage probe.

California Instruments' single-board construction techniques contribute to its ability for delivering maximum capability together with simplified calibration and ease of maintenance at a competitive price.

Exceptional AC measurement performance is obtained through the use of a wideband, fast settling time AC converter.

The measurement of frequency is accomplished through the use of our exclusive circuit technique known as SYNCHRO-COUNT, on which Patent No. 369745 has been issued.

AUTOMATICALLY COMPUTE PHYSICAL AND ELECTRICAL PHENOMANAE

WITH THE NEW CP70 INSTRUMENT ORIENTED

CALCULATING PROCESSOR

- Interfaces with instruments, computers, process control equipment, data systems and peripherals
- Computes Ratios, Deviations, Speed, Horsepower, Flow, and many more
- 4 standard programs, expandable to 16
- 84 standard equations plus 4 thermocouple programs
- Automatic limit comparisons of computed values
- Accepts up to 3 full 6 digit inputs, plus polarity and range

With the hardwired program approach, the CP 70 is as easy to interface and control as a digital multimeter. Like digital multimeters, which require a simple control command or press of a button, the CP 70 will execute computational tasks with the same ease of control. The two main advantages offered by the CP 70 over similar devices are price and simplicity of interface and operation. Unlike programmable calculators and mini-computers, the user or system designer requires no knowledge of software or programming. Further, there is no need for de-bugging of programs or for software loading devices such as teletypes or high speed tape readers.

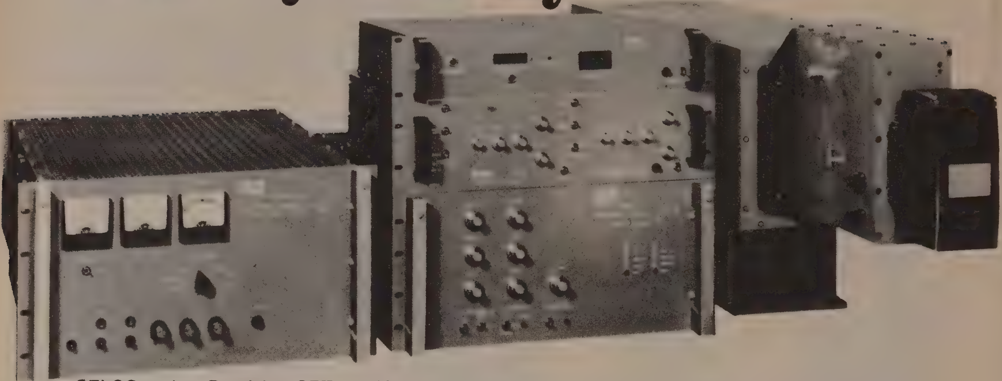
The "Above-Average" Sub-System by Celco



CELCO makes Precision CRT Displays for your "above-average" CRT requirements.

Need a CRT spot-size as small as 0.00065"? This standard CELCO 5" CRT display is being used for Satellite Photography. They needed the best they could get. You can get performance like that too with CELCO's DS5-065 Precision CRT Display.

A CELCO DS5-08 with 0.1% linearity, and spot size of 0.0008" is being used by another CELCO customer for Nuclear Photography Film Recording. Special features include programmable Raster Generators, and triple-layer and articulated shielding for ambient fields from earth's field and from dc to RF fields.

Fingerprint Scanning is the job of CELCO's DS5-10 Optical Character Recognition System for one of our customers. They needed that wide 2.5 MHz deflection bandwidth for high-speed scanning of vast amounts of data. And the DS5-10 has a settling time of 10 microseconds to 0.1% large signal, and 350 nanoseconds to 0.02% small signal settling time. Spot-size is 0.001".

One CELCO customer is using our 5" Color Display System for color separation and color photo scanning. One display does all that!

If your *needs* are "above-average" but your budget is *below*-average, CELCO also makes a 5" Precision CRT Display System especially for you that's ideal for your Low-Cost Film-Scan applications. Or if your display needs are larger, CELCO makes standard precision 7" and 9" CRT displays.

Our DS5-075 provides NASA with a 0.00075" spot-size for their Viking Orbiter and Viking Lander satellite photography. They needed 0.01% repeatability too. And they got it. From CELCO.

Two different customers with "above-average" display needs are using CELCO CRT Display Systems for Astronomy Research. One is an observatory; they're keeping their eye on the Sun. The other is recording their Stellar Observations with a CELCO CRT Display System.

High-speed map making is the task of another CELCO customer using a CELCO precision display for topographical projects.

CELCO displays are helping a leading Oil Company in their oil explorations. While another CELCO display is being used in Eye Research.

Maps and satellites, eyeballs and oilwells. All "above-average" display requirements. If your needs are ABOVE-AVERAGE, you need a CELCO "above-average" Precision CRT Display System.

(Don't you think so too?)

Call CELCO for your "above-average" CRT Display System.

UPLAND CA 714-982-0215
MAHWAH NJ 201-327-1123

(average is so . . . ho-hum to us.)

Celco

CONSTANTINE ENGINEERING LABORATORIES COMPANY

1150 E. Eighth Street, Upland, CA 91786
70 Constantine Drive, Mahwah, NJ 07430

CELCO makes "Above-Average" YOKES for "Above-Average" CRT Displays

Need a deflected CRT spot as small as 0.00065"? CELCO's HDQ High-Resolution Deflectron for Satellite Photography Readout was the choice of one of our customers for their "Above-Average" display requirements. You can get performance like that with a CELCO YOKE optimized on your CRT for your "Above-Average" display. (measured with a CELCO CRT Spot Analyzer.)

Or YOUR "Above-Average" display may require fast Zero-approach settling time, as required in a Fingerprint Scanning job where CELCO HDN Deflectrons are specified to recover to 0.01% in 25 us.

Wide Bandwidth to provide several hundred nanosecond step response was part of this customer's display requirement too. (A CELCO RDA-1260 Deflection Amplifier did the driving.)

Precision Linearity on the final film plane or work surface, in Integrated Circuit Mask-Generator Displays enables producers of LSI technology to make low-cost computers for all of us. CELCO Special Deflectrons and Linearity Correctors LC123 are being used by several equipment builders for their "Above-Average" displays.

For PEPR, a system for reading Bubble Chamber photographs, developed by a few individuals at MIT and refined and expanded by others at leading universities throughout the world, CELCO was asked to provide special Low Residual Yokes for their project. CELCO produced their HD Deflectron with special 0.003% residual, and GFJ irrotational Focus Coils to help achieve the performance of these "Above-Average" displays.

CELCO DAPP2N-7 Amplifiers drive the Dynamic Focus Coil; a CELCO DAPP2N-5 Amplifier was selected by another PEPR group to drive the CELCO B1700 Di-Quadrupole which produced the rotating high-resolution scanning line!

"Above-Average" Recording Storage Tube displays with 1$\frac{7}{16}$" neck scan converters and storage tubes need CELCO QY and QD Recording Storage Tube Yokes.

The QY Yoke, matched with a CELCO QF Focus Coil, or the QD Yoke matched with CELCO's Low-Residual AFH Focus Coil helps guarantee the success of your "Above-Average" Storage Tube application. For 1⅛" neck Storage Tubes, we recommend our QYT and FQT Yokes and Focus Coils.

CELCO electronics and magnetics were integrated into a CELCO "DS" Special Display System for Oil Exploration and Data Reduction where "Above-Average" Linearity, Spot Growth, Zero-approach, Bandwidth, and Residual performances were required. Our customer decided to use CELCO's unique display experience to achieve his "Above-Average" display.

In "Above-Average" Direct-View displays, 0.00065" spot size is not needed since it is not discernible by the naked eye. But on LARGE screens, small errors of recovery, spot growth, residual, linearity, deflection defocussing and astigmatism are readily apparent. This is due to the wide deflection angles, large electron beam bundles in the yoke field, long throw distances from yoke to screen electron-gun and focus field aberrations.

CELCO "Above-Average" deflection yokes, focus coils, beam-centerings and aligners, astigmatic correctors, and pincushion correctors applied to your specific requirement will help you produce YOUR "Above-Average" Direct-View Display. CELCO YB, YA, and Hi-Q Yokes are used in Large-Screen, Direct-View airborn radar displays to take advantage of their fast dynamic response characteristics. Use them in YOUR "Above-Average" display.

For improved system performance in High-resolution displays use CELCO Beam Centering and Flooding Coils, and also for convenient location of adjustment controls.

CELCO LC, KC, JC, or MC coils for ⅞", 1$\frac{7}{16}$", or 2" CRT necks produce uniform confined magnetic fields to minimize distortion of the useful electron beam.

- CELCO Immersion Optics, for Vidicon, Storage, Image Orthicon, Image Dissector and Intensifier coil assemblies provide for deflection, focus, and alignment of your "Above-Average" applications.
- CELCO WV is a High-resolution Vidicon Assembly. Ruggedized, it was used on cameras in Tyros, Nimbus, Ranger, Venus-Mercury and other Space applications.
- CELCO CV Yoke Assemblies enhance the performance of 1" silicon storage tubes. CELCO DV Image Dissector coils are designed for digitizing with precision at high speeds and high resolution.
- CELCO IO coils for Image Orthicon and SEC tubes are designed for ground-based Orbiting Astronomical Observatory Readouts or rocket-borne research.
- CELCO Lens Assemblies, Type NU with Static and Dynamic Focus Coil, and Static and Dynamic Astigmatic Correctors are used on Film Recording Systems, Flying Spot Scanners, Optical Character Recognition Systems, and Computer-On-Microfilm (COM) to keep spots round and small.
- CELCO type HFH Certified performance Focus Coils are designed to provide Low Residual and Low Astigmatism and are used in conjunction with CELCO Yokes to minimize spot size and change in focus current. CELCO recommends Type HFL Focus Coils for general purpose, high quality CRT displays.
- CELCO Focus Coils are the choice for such "Above-Average" missions as the Ground Receiving Stations for many U.S. Space Probes into the Solar System, as well as for ERTS orbiters.
- CELCO DH Mini-Yokes measure 1.2" OD, weigh in at 3 oz., and are designed for ⅞" CRT necks and 50° deflection angle. 50° deflection angle on ⅞" CRT necks is obtained with CELCO's MY Mini-Yoke; 1⅞" OD, ¾" oz.
- The CELCO Type SD Low-L Deflectrons are Computer-designed and tested Yokes for ⅞" to 1$\frac{7}{16}$" CRT neck diameter, and provide to 90° deflection angles . . . (sort of a "yoke designer's YOKE).
- CELCO CRT Mounts, coil positioners, holders and magentic shields will enable you to get everything together to achieve your "Above-Average" display.
- CELCO C1, C2, C3, C4, etc. mounts are designed to hold CRT and coils of your choice. PB1, PB2, etc. are CELCO Yoke and Focus Coil positioners to enable you to precision-position the yoke and focus fields around the electron beam for optimum performance.

REMEMBER CELCO YOKES, whether you want to send a man to the moon, a probe to Jupiter or Mars, investigate chromosomes or trophoblast for cancer research, or build a large format scanner to generate typesetting masters, X-Ray enhancement, or data digitization.

Call CELCO for the "Above-Average" YOKE you need for YOUR "Above-Average" CRT Display System. (average is so . . . ho-hum to us.)

4 ways IC Update Master can solve the problem of device selection.

Smaller companies often offer special performance devices. How would you find a company making a device you need?

Go to the Master. Section 2 is a product guide to the entire IC industry. It allows you to survey all devices, their key operational characteristics, and the companies who supply each one.

You want to call for information on TI's MOS memories . . . What city would you call for information.

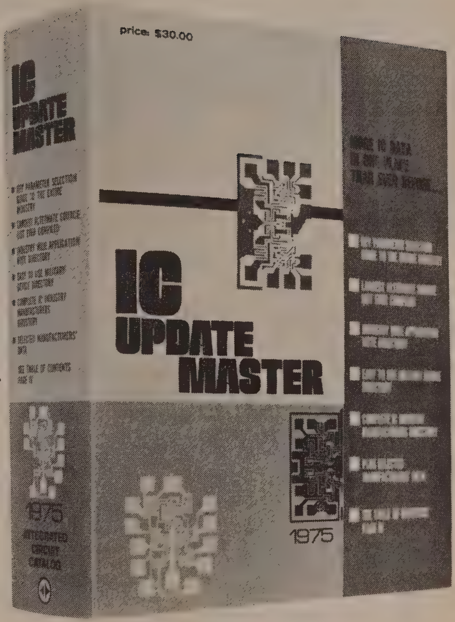
Go to the Master. Section 7 is a comprehensive telephone directory of the entire IC Industry. Page 7-37 lists Texas Instruments and the extension number for product information on MOS. It also contains a phone listing for TI sales offices and distributors throughout the country.

Motorola makes an MCM 4004 device . . . where would you look to find an alternate source for an MCM 4004?

Go to the Master. Section 3 is an industry wide cross reference. It contains over 14,000 cross references. Page 3-20 lists five other companies and their part numbers for pin-for-pin replacements of an MCM 4004.

Got a design problem . . . could an application note help?

Go to the Master. Section 5 is a comprehensive guide to the many IC application notes available. It lists the devices covered, describes each note and tells who publishes each one.



price: $30.00

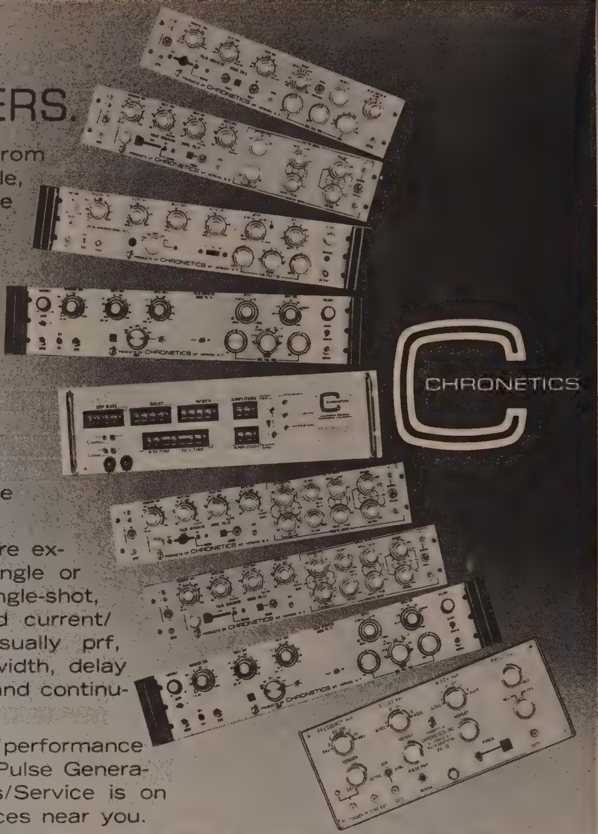
THE *PLUS* PULSERS.

Advanced Pulse Generators from CHRONETICS: The most versatile, sophisticated, high performance pulsers in the field. State of the art circuit design, meticulous construction for reliable quality. Performance and flexibility second to none. Thirteen standard models for virtually every need.

Repetition rates from 0.1 Hz to 100 MHz, output amplitudes from 0 to ±100 volts or ±2A, rise/fall-times of less than 2 ns, wide dynamic ranges, high duty cycles, bipolar outputs, etc. are all available on standard instruments.

Chronetics' Pulse Generators are exceptionally flexible. All provide single or double pulses of either polarity, single-shot, pulse bursts. Bipolar outputs and current/voltage modes are available. Usually prf, amplitude, risetime and falltime, width, delay and DC-offset are independently and continuously variable.

"Total Pulse Control" and price/performance engineering make CHRONETICS' Pulse Generators the best buys in the field. Sales/Service is on a world-wide basis with field offices near you.



CHRONETICS Advanced Pulse Generators

MODEL	CLOCK PRF	AMPLITUDE[2]	Z OUT	RISE/FALL TIME	PULSE DURATION	PULSE DELAY	DUTY CYCLE (MAX)	DC OFFSET

VERSATILE
ECONOMICAL
Model 925

automatic relay tester

LARGE CAPACITY/ PRACTICAL FIXTURING

Basic machine can test 6PDT, 2 coil relays in any one of five identical test positions. Four wire connections to all elements except case and coil(s). "Zero Insertion" sockets available for DIP and most 200 mil spacing pin type relays. Standard connectors available for "In house" fixturing.

HARD COPY FAILURE MESSAGES

Upon a test failure the system produces a "Failure Message" which indicates the Test failed, the Test Position, and whether the Test was failed HIGH or LOW. "Continue" button causes the test sequence to restart.

AMPLE INDICATORS and CONTROLS

Indicator Lamps show:
- The Test in Progress
- The Test Position being investigated
- PASS or FAIL results of each Test.

Switches allow:
- Incrementing Test Positions
- Choosing the "Single Test" mode
- Resetting any Test at any time
- Overriding the programed dwell time with a minimum dwell time of 1 second.

Panel Meter holds:
- The last Coil or Contact resistance reading.

WIDE RANGE OF TESTS

Coil and Contact Resistance. Pick-up and Dropout Voltages. Operate, Release, and Bounce Times. Four different High Potential Insulation Resistance Tests. Latch up Test. Make-Before-Break and Break-Before-Make Tests.

EASY TO PROGRAM and/or OPERATE

Complete program written in minutes. Programs in simple English. Operates in "Single Test" or continuous Tape controlled Modes. Easily programed to sequence through test positions without operator intervention. One short Tape loop can contain a complete Test Sequence.

WIDE RANGE OF PROGRAMMABLE TEST VOLTAGES, CURRENTS and TIMES

Coil Voltages:
0.1V to 75 V, 0 to 250 mA.

Contact Resistance Test Currents:
10 to 2,000 mA.

High Potentials: 50 to 1,500 V.

Time Intervals:
100μsec to 100 milliseconds.

"High Pot" Dwell Times:
1 to 100 seconds.

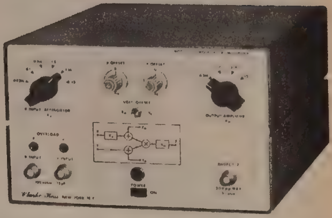
HIGH THROUGHPUT

Testing time per relay depends upon the number of tests performed and with High Potential tests upon the dwell times chosen. Running 13 tests per relay and allowing 5 seconds dwell time for all "High Pot" tests will allow a yearly rate (single shift) of at least 80,000 DPDT relays. Except for the dwell times the typical time per test is 2-2.5 seconds.

EASY TO SERVICE and MAINTAIN Easy access to all subassemblies. Complete Documentation.

clarke·hess COMMUNICATION RESEARCH CORP.
43 WEST 16th STREET • NEW YORK, N.Y. 10011 • (212) 255-2940

unique instrumentation



Model 200 **FOUR QUADRANT, BROADBAND, ELECTRONIC MULTIPLIER SYSTEM.**

Ready to use as a *suppressed carrier modulator*, as an *instantaneous wattmeter*, as a gain *controlled amplifier*, as a high quality *AM modulator*. Amplifier — 3 dB bandwidth above 6 MHz. Difference in channel delays under 2 nsec. Total "feedthrough" at 2 MHz less than 40 dB. dc coupled, low dc drift. Price $520.00

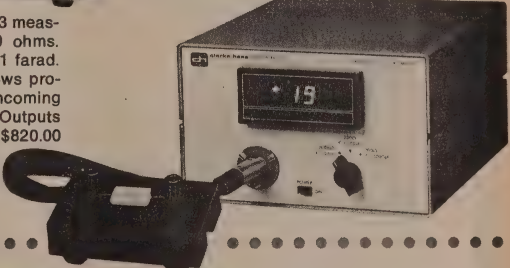
Model 235 **WIDEBAND WATTMETER**

20Hz — 20 kHz; 2W — 20kW. Full scale up to 31 A/630 V. down to 100 mA/20 V. Accuracy 1%, any connection. Power Factors 0-1. Easy to connect and to read. BCD output available. Various range combinations available: 6 to 600 V, 10 mA to 31 Amperes. Price $2495.00

Model 273 **DIGITAL ESR METER**

The industry standard for 100 kHz ESR measurements. The Model 273 measures Equivalent Series Resistance values from 1 milliohm to 20 ohms. Handles any type of capacitance with values from 5,000 pF up to 1 farad. In use by the world's leading capacitor users. The Model 273 allows production line monitoring in capacitor manufacture and 100% incoming inspection for capacitor users with critical loss requirements. BCD Outputs Standard. Price $820.00

Model 273 also measures internal impedance of *Batteries*, contact resistance of *Relays*, and the effective loss term in *Networks*.



function generators

All function generators with sine, square, and triangular waveshapes, Tone Burst, Phase Lock Synchronization, Wide Range low distortion VCF and/or FM. All extend down to 1 mHz with "Low Frequency Expand Switch". All generators have sine wave distortions below 46 dB and extremely flat sine wave amplitude vs frequency characteristics. Most units sweep to twice the upper dial frequency. All generators have 50 ohm output, 60 dB of output range.

Model 743 **TONE BURST, PHASE LOCK SYNC.**

Dial Controlled 1 Hz to 2 MHz. Low distortion FM or VCG. Price $385.00

Model 744 **TONE BURST, PHASE LOCK SYNC.**

Dial Controlled 3 Hz to 3 MHz. Balanced 600 ohm output. Price $415.00

Model 745 **THUMBWHEEL SWITCH CONTROLLED**

0.01 Hz to 1.1 MHz. Frequency accuracy ±0.4% ±2 digits. Price $525.00

Model 748 **DIAL CONTROLLED 1 Hz to 2 MHz.**

High quality, low distortion AM or suppressed carrier modulation or detection. Price $535.00

Model 750 **DIAL CONTROLLED 1 Hz to 2 MHz.**

Internal ramp generator with sweep times from 1 msec to 200 seconds. Price $495.00

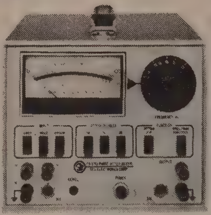
COMSTRON·SEG TELEPHONE CHANNEL TEST AND SIMULATION EQUIPMENT

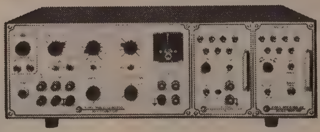
PHASE JITTER METER



FA-1743

- Measures peak-to-peak phase jitter from 0° to 100°
- Unique BUILT-IN SPECTRUM ANALYZER for instant determination of jitter frequencies and their contribution to total phase jitter, even in the presence of large amounts of broadband noise.
- Accepts carrier frequencies from 800 to 1800Hz
- Simplified operation — no level set or frequency adjustment required
- Rugged, portable — for field and laboratory use

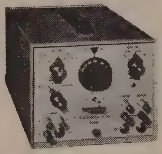
PHASE JITTER SIMULATOR



FA-1564 A

- Simulates normally encountered active telephone channel impairments such as phase jitter, phase hits, harmonic distortion, broadband and impulse noise and frequency translation
- Simulates phase jitter; 0 to 45° peak-to-peak; jitter frequencies, 20 to 300Hz
- Use for developing, testing and evaluating data-com equipment

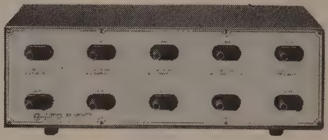
TUNABLE BAND PASS AND BAND REJECT FILTER



AF-850A

- Telephone channel filter tunable from 35Hz to 3500Hz
- Use for notched noise measurements and waveform analysis; 3.5Hz and 35Hz bandwidth
- Fully compatible with telephone channel transmission measuring techniques and equipment
- 0dB, 10dB, 20dB, 30dB gain and by-pass functions
- Generates reference signal at Fc of notch and bandpass

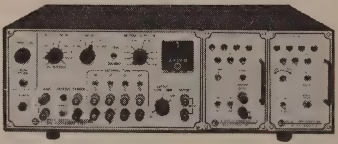
TELEPHONE DATA LINE SIMULATOR



Model LSCC-( )

- Contains up to 5 data line simulators
- Industry standard telephone line simulator
- Simulates nominal worst case attenuation and delay, per Bell, CCITT, and DCS schedules
- Simulates 3002, C1, C2, C4 and DCS-S3
- Controlled out-of-band characteristics
- Also available: C-Message Weighting, F1A Weighting, Telephoto 1 and 2, etc.

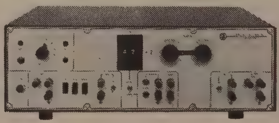
DROPOUT SIMULATOR



FA-1955 A

- Simulates data-channel dropout; adjustable duration from 1 ms to 10 seconds and depth from —3dB to greater than —50dB
- Simulates additive broadband and impulse noise, SFI tones and out-of-band signals
- Operates in band limited mode, with SEG Telephone Data Line Simulators, or in broadband metallic mode

DIGITAL DELAY (ECHO) GENERATOR



FA-1755

- Simulates data channel delay and/or echo
- Delay to 100 ms* in 1 ms steps
- Stores 99 ms* of transient input data and continuously regenerates it for analysis or utilization as additional channel impairment
- Bandwidth 200Hz to 3.4kHz delay-corrected to 50usec
- Echo adjustable to 49dB in 1dB steps

*Up to 2 seconds available

COMSTRON MODEL 1013 FREQUENCY SYNTHESIZER
0.1Hz to 13MHz WITH FULL 5+ DIGIT ACCURACY AND PROGRAMMABILITY

Now you can have the precision and versatility of a synthesizer at the price of an ordinary oscillator.

Here's the synthesizer that gives you full 5+ digit crystal accuracy (no accuracy stealing verniers), clean signals, automatic leveling, and high output power.

The new 1013 is the only synthesizer using COMSTRON's Direct Programming Differential Synthesis Technique (patent pending) that gives uncompromising precision and high speed programmability. It all adds up to a cost-performance breakthrough with unmatched reliability and data handling capability . . . your guarantee of performance with integrity.

SPECIFICATIONS

Range

Frequency Range:
0.1Hz to 13MHz in 5 ranges

Accuracy

Frequency Accuracy:
Full 5+ digits, ±0.001% of setting for 6 months, 0°C to 55°C

Frequency Stability:
Full 5+ digits, long term is ± 10 ppm of setting per year at ambient

Purity

Phase Noise:
Signal to phase noise (integrated); Greater than 40dB in a 30kHz band excluding ± 1Hz, centered on carrier 10MHz range, greater than 60dB, 1MHz range and below

Harmonic Distortion:
−40dB 1 MHz to 13MHz
−50dB 0.1Hz to 1MHz

Spurious:
Greater than 60dB below selected output level or less than −110dBm/50 ohm, whichever is greater

Amplitude:
Maximum 6Vrms open circuit
3Vrms (+23dBm) into 50 ohms

Output Impedance:
50 ohms

Amplitude Control:
Attenuator; +20 to −30dB in 10dB steps
Continuous control: +3 to −15dB
Meter indication in volts and dBm

Square Wave Output:
Positive going square wave TTL compatible

Options

Option 001	Programming—Parallel BCD, field installed
Option 002	Programming—ASCII, Isolated, field installed
Option 003	Ultra-Stable Reference Oscillator, field installed
Model 101	Micro-machine for programmed frequency hopping, sweeping and searching. Uses Model 1013 display and is programmed directly from the Model 1013

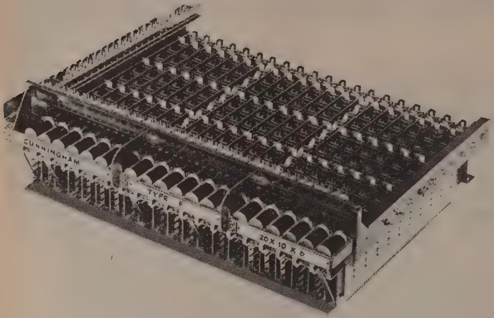
crossbar matrix switches



Cunningham crossbar switches have a minimum operating life of 20 million operations per crosspoint, due largely to their gold-alloy, self-wiping contacts. These, together with the beryllium-copper coordinate conductors, provide extremely low path resistance and minimal EMF. Insulation resistance is very high, while induced noise is virtually nonexistent. The crossbar actually covers a wider frequency band than any other comparable switching device, and handles low-level to high-power signals. Matrix switches from ten to three hundred 6 wire crosspoints.

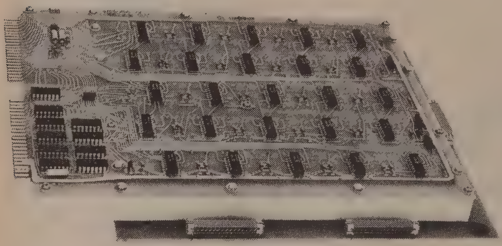
The Type A crossbar is a broadband group-to-group signal routing switch with coordinate actuation of the crosspoints.

The Type F crossbar is a coordinately actuated group-to-one matrix with the capability of connecting any one of a number of inputs to a single output or vice-versa.

The Type P crossbar is a broadband frequency group-to-group signal routing switch with direct actuator coils positioned above each crosspoint.

The Type T crossbar is a group-to-one switch that is ideal for handling low-level (microvolt) signals. Direct actuator coils are mounted above each crosspoint.

reed matrix switches



Two reed matrix models are available for high and intermediate frequencies. They are supplied in the 5x10 (50 crosspoint) configuration only. Crosspoints are interconnected to form a group-to-group switching matrix.

The high frequency (HF) model is a single-pole matrix for switching signals up to 60 MHZ. The multilayer signal board provides shielded signal paths with 50 ohm characteristic impedance. Input and output are through subminiature coaxial connectors. The coaxial cable shields are all tied together through the connector shells to a common ground. Only the center conductor is switched.

The intermediate frequency (IF) model can have one, two, or three poles at each crosspoint and can handle signals from DC to 4 MHz. Multipin connectors are used for input and output signal connections. For general purpose switching applications where the signal frequencies do not need the heavy shielding of the H.F. model.

for applications assistance call (716) 624-2000

SPECIFICATION	TYPICAL CROSSBAR MATRIX	TYPICAL REED MATRIX
Minimum Life:	2x10⁷ operations per crosspoint.	10⁸ operations per crosspoint.
Current Rating:	Switch 100 mA @ 50 VDC, carry 1.0 A.	Switch 100 MA @ 12 VDC, carry 1.0 A.
Contact Material:	Gold alloy 0.005″ thick.	Rhodium plated.
Contact Resistance:	Less than 30 milliohms.	Less than 300 milliohms.
Contact Stability:	Better than ±5 milliohms.	Better than ±150 milliohms.
Longest Path Resistance:	Less than 400 milliohms—in 30x10 matrix.	Less than 300 milliohms—in 5x10 matrix.
Thermal EMF's:	Less than 0.1 microvolt per °C.	Less than 1.0 microvolt per °C.
Insulation Resistance:	Greater than 100,000 megohms @ 45% R.H.	Greater than 100,000 megohms @ 45% R.H.
Breakdown Voltage:	1000 VAC, rms @ 60 Hz, 1500 VDC between conductors and frame or across open contacts at humidity below 45% R.H.	500 VDC between conductors or to ground, 250 VDC across open contacts at humidity below 45% R.H.
Frequency Range:	To 10 MHz w/—50 db cross-talk and 60 db isolation.	HF Series—to 50 MHz w/—60 db crosstalk and 60 db isolation. IF Series—to 4 MHz w/—60 db crosstalk and 60 db isolation.
Operate Time:	Less than 30 millisec.	Less than 4 millisec.
Release Time:	Less than 10 millisec.	Less than 2 millisec.
Contact Bounce:	Less than 400 microsec on make, not measurable on break.	Less than 100 microsec on make, not measurable on break.
Induced Noise:	Less than 5.0 millivolt.	Less than 100 microvolt.

Cunningham Corporation

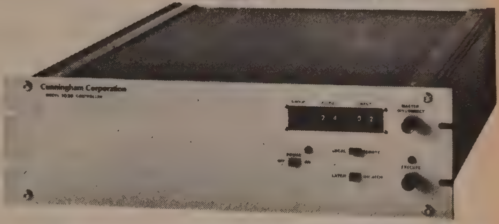
matrix controller

The 1020 Controller interfaces a switch matrix to any 16 bit address device. Crosspoint connections can be programmed to latch or unlatch as required. CMOS logic is used to insure high noise immunity and low power consumption. Both local and remote control are featured. This standard interface component facilitates a wide variety of matrix applications as in automated testing or telemetry switching.



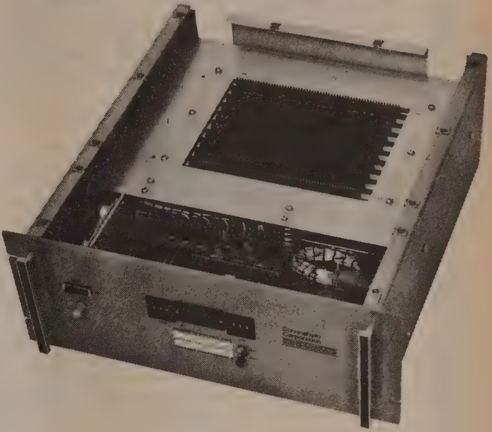
for applications assistance call (716) 624-2000

data acquisition scanners

Cunningham has developed two versions of the 2000 Series scanner for sequentially or randomly reading a number of instrument-level signals. One of these uses a crossbar while the other uses SC-10 reed cards for switching. The crossbar matrix switch is ideal for extremely low signal levels (Microvolts). The reed cards are best applied where scanning speeds exceed 50 channels per second.

Control, logic, and interfacing for both versions are performed by integrated circuitry to ensure compatibility with peripheral instruments. All levels are DTL and TTL compatible and each input represents only one standard load. Each output can accommodate 10 standard loads.

Front panel controls include single channel random access, single scan, continuous scan, scan limit switches, and single channel advance. A three-digit display shows which channel is being sampled, Either scanner can be remotely controlled, in which case the unnecessary controls may be omitted from the front panel.



SPECIFICATION 2000 SERIES	REED SCANNER	CROSSBAR SCANNER
Number of data channels	10-100 three-wire in increments of ten channel per plug in scanner card	600 one-wire, 300 two-wire, 200 three-wire, 100 six-wire
Contact resistance	< 100 milliohms	< 50 milliohms
Contact stability at maximum ratings over life	± 2.0 Ohms	±10 milliohms
Initial data path resistance	< 300 milliohms	< 250 milliohms
Thermal EMF's +25°C — +50°C	< 1.0 microvolts/ °C	< 0.1 microvolts/ °C
Open contact capacitance	0.2 pf	0.3 pf
Contact ratings resistive loads	500 milliamps at 200 VDC	100 milliamps at 50 VDC
Open contact breakdown voltage	250 VDC	1500 VDC
Insulation resistance at 95% R.H.	100,000 Megohms	100,000 Megohms
Scan rate	to 200 ch./Sec.	to 40 ch./Sec.
Contact bounce	< 500 microseconds	< 400 microseconds
Contact dwell time at maximum speed	> 2.3 milliseconds	> 7 milliseconds
Expected life at rated loads	10 Million closures/ch.	20 Million closures/ch.
Logic levels	Logic "1" = 4.0 ±1.0 Volts Logic "0" = 0.4 ±0.4 Volts	Logic "1" = 4.0 ±1.0 Volts Logic "0" = 0.4 ±0.4 Volts
Power consumption	45 Watts	50 Watts
Operating temperature range	0°C to 70°C	0°C to 60°C
Signal input connectors*	1 Winchester 50 Pin/Card	20 Cunningham SP-1173
Signal output connectors*	Winchester 4 Pin	20 Pin
Control connectors*	56 Pin	56 Pin
Dimensions	3.5" High, 22" Deep, 19" Wide - front panel	7" High, 22" Deep, 19" Wide-front panel
Weight	21 Lbs.	30 Lbs.
Weight - Packed for shipment	36 Lbs.	45 Lbs.
Contact material	Rhodium plate	Solid gold — .005 in. thick.

* Mating connectors are supplied.

CURTIS

AMPERE HOUR METERS, STATE-OF-CHARGE INDICATORS and CHARGE CONTROLLERS

The 920 Series of "Fuel" Gauges, Ampere Hour Meters and Controllers was originally developed for a variety of special space and military applications. Versions of these units are employed on such critical applications as the Trieste II, the Lunar Rover Vehicle, and special military applications. Numbers of units are serving as special instrumentation on experimental electric traction vehicles.

The Curtis 920 Series is a family of precision, bi-polar ampere hour integrators, offered in a variety of functional packages which, in their simplest configuration . . . **continuously display the energy level of rechargeable batteries.**

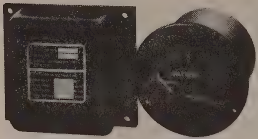
And in other package configurations, also . . . **control the charge cycle and . . . provide low level alarm or lockout signals.**

WHAT THEY DO

• Permit maximum performance and efficiency in battery operated equipment and systems • Extend battery life by eliminating abusive overcharge and deep discharge • Prevent unexpected work stoppages by providing continuous display of work life left in battery • Automatically measure actual ampere hours removed during discharge and replaced during recharge • Control battery charge without expensive charging controls.

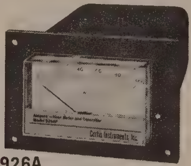
WHAT THEY FEATURE

• Accurate continuous display of state-of-charge • Actual ampere hour measurement • Charger control based on actual state-of-charge • No maintenance—all solid state • Low cost • Completely automatic operation.



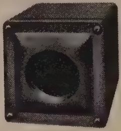
MODEL 925E ELECTRIC VEHICLE FUEL GAUGE

Designed specifically for use in electric powered vehicles, the 925E provides a continuous reading of remaining battery capacity to the operator. Automatically resets as batteries are recharged. Requires no maintenance or periodic calibration.



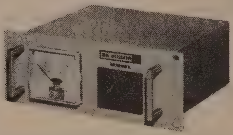
MODEL 926A AMPERE HOUR METER AND CHARGE CONTROLLER

Designed for large rechargeable stationary battery systems, the 926A is available for rack or bulkhead mounting with integral or remote meter. High and low level detectors and an adjustable charge/discharge ratio to compensate for battery losses are standard. Plug-in printed circuit card construction permits a wide range of options (extra contacts, signal conditioning, power conditioning, etc.) to be easily incorporated for custom applications. Used in systems where extremely high discharge rates and asymmetric charge/discharge ratios are encountered. For a more complete description, call or write for the 926A data sheet.



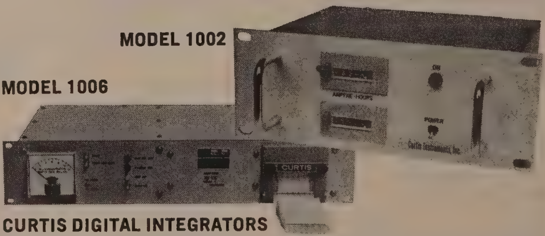
MODEL 928 AMPERE HOUR METER AND CHARGE CONTROLLER

Used in heavy industrial traction or stationary applications, the 928 features an adjustable capacity range and charge/discharge ratio as well as a wide operating voltage range. Simple, convenient controls permit rapid adjustment of operating parameters making the 928 compatible with most battery systems. Requires no maintenance or periodic calibration. Can be used in conjunction with battery and battery chargers as ampere hour meter and charge controller. Call or write for the 928 data sheet.



MODEL 1004 AMPERE HOUR METER WITH DIGITAL REGISTER

The Model 1004 answers the need for a continuously recording ampere hour meter that is powered directly from the DC voltage of the power source. It has no drift, and non volatile storage. Ampere hours are displayed in the first decade in vernier analog form while a six digit counter provides the digital readout. Available with integral shunt in a complete range of currents.



MODEL 1002

MODEL 1006

CURTIS DIGITAL INTEGRATORS

For applications where the unique features of the infinite memory, analog output bipolar integrating elements are not required. Curtis has developed several series of electronic integrators. The 1002 series of Ampere Hour Meters and Current Time Integrators are enjoying growing acceptance for precious metal and other electroplating requirements. The 1002 is available in a wide range of ampere hours and various counter configurations.

The 1006 is a printing integrator designed to integrate outputs of the Philips SO_2 detector and other transducers for environmental monitoring, and automatically print, on 15 minute to 4 hour intervals, the integral in PPM/Hr with real time identifier.

For additional information and full specifications, write:

CURTIS INSTRUMENTS, INC. 207 Kisco Avenue, Mt. Kisco, N.Y. 10549 • Tel. (914) 666-2971
TWX 710-571-2163

CURTIS

ANALOG ELAPSED TIME INDICATORS

...Smallest size, lowest cost, AC or DC, any voltage

How they work — The patented Curtis Ampere Hour Meter is basically a mercury microcoulometer fabricated from precision bore, glass capillary tubing filled with two columns of mercury separated by a small electrolyte gap. Application of pure or pulsed DC signals to electrodes inserted in the mercury causes mercury at the anode to be electrochemically transferred across the gap to the cathode at a time rate proportional to the current. The gap moves along the tube length as a function of the current-time integral. A constant-current supply provides a precision timing device.

TYPICAL APPLICATIONS

Warranty — Low-cost meters for warranty of equipment based on both actual usage, and calendar period.

Reliability Engineering — Provides mean-time-to-failure or sub-system replacement time without costly, unreliable logging.

Test Equipment Utilization & Calibration — Provides calibration on actual hours of use with savings up to 50% compared to calendar-basis programs. Substantial savings in capital investments can be realized with accurate utilization data on test instruments, tools and equipment.

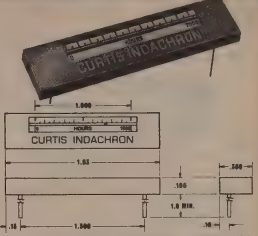
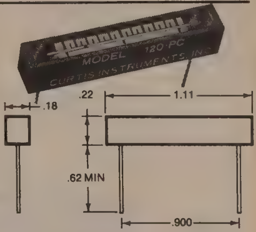
L Series Curtis Indachron™

Used on OEM equipment as a very low-cost means of validating warranties and for P.M. scheduling. Under $2.00 each in production quantities. AC and DC Models. Various time scales and electrical ratings. Can be mounted on printed circuit cards or direct to chassis with adhesive strips.



120-PC Series

Radial leads for installation directly on printed circuit cards for "mean-time-to-failure" or preventative maintenance scheduling. Can be instrumented from available DC voltages for any time scale by use of series resistor. Full scale of .65 inches = 4.16 milliamp-hours.



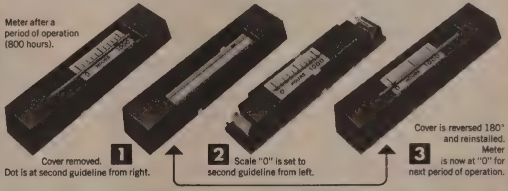
620 PC, 620N Series, MIL Type

The Curtis MIL type analog timers are made in two configurations. The 620N Series meet MS90386, and are now available in 5V and 15V, as well as 28V DC and 115V AC models. The 5V and 15V units directly answer the long felt need for an elapsed time meter than can be powered **directly** from voltages available within the box, precluding the necessity of special wiring for the ETI. The units also provide dramatic economies over the older electromechanical types. The 28V DC version provides for internal regulation over the complete aircraft power range, and the 115V AC device is truly insensitive to variation in line frequency.

The 620 PC Series meets the MS-3311 (AS) and was specifically designed for repairable modules and subassemblies, is very low cost and installs directly on PC boards.

CP-3 Series

New low cost monitor for P/M scheduling and other applications requiring a simple means of reset to zero in the field. AC or DC. Scales for any type of scheduling.

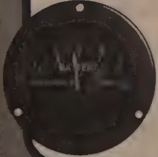


Meter after a period of operation (800 hours).
Cover removed. Dot is at second guideline from right.
1
2
Scale "0" is set to second guideline from left.
3
Cover is reversed 180° and reinstalled. Meter is now at "0" for next period of operation.

ANALOG COUNTERS

When operated by well defined pulses such as digital logic signals, any Curtis INDACHRON™ can be calibrated to provide direct indication of accumulated number of pulses with virtually any full scale reading. They can be used to count the number of lines, copies, characters, or other operating functions of computer peripherals, office or communication equipment.

CURTIS INFINITE MEMORY INTEGRATORS



Battery "Fuel" Gauges

Meter displays % of discharge (amp-hrs. remaining in rechargeable battery systems). Typical of applications for Curtis 925 Millivolt Integrator.

Ampere Hour Meter and Controller Model 926-A

For large rechargeable stationary battery systems. High and low level detectors. Adjustable charge/discharge ratio to compensate for battery losses.

Powered from battery system. Available in panel and bulkhead mountings. Also model for remote panel meter display.

1006 Pollution Monitor

A new automatic integrator, with cyclic printout of the integral of the output of any pollution monitor. Records total quantities of emission, and substantially replaces manual data reduction.

DANA EXACT ®

Function Generators

NEW!!

510 SERIES

LOW COST 10 MHz FUNCTION GENERATORS
- Low Cost Instruments
- .001 to 11 MHz Frequency Range
- Sine, Square, Triangle, VCF Generators
- Positive and Negative Ramp or Pulse Outputs
- Linear and Logarithmic Sweepers
- Select Start and Stop Frequency
- 80 db Attenuation, Variable DC Offset, Sync, Trigger
- 20 V P-P Open Circuit 10 V P-P Into 50 Ohms

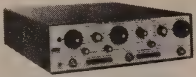
120 SERIES

FUNCTION GENERATORS
- Low Cost and Precision Units
- 3 MHz and 5 MHz Generators
- VCF Generators
- Dual Output Instruments
- Linear and Logarithmic Sweepers
- AM/FM Generator
- 20 V P-P Open Circuit 10 V P-P Into 50 Ohms
- Variable DC Offset

NEW!!
196A

190 SERIES

FUNCTION GENERATORS
- Low Cost
- 200 KHz and 1 MHz Units
- VCF Generators
- Sweep and Pulse Capability
- 600Ω and 50Ω Output Impedance
- Battery Powered Units
- 20 V P-P Open Circuit Output
- Stocked Locally



NEW!!
7059

7000 SERIES

PRECISION 10 MHz FUNCTION GENERATORS
- 0.0001 Hz to 11 MHz Frequency Range
- Sine, Square, Triangle, Ramp, Pulse, ± Sine, ± Square, ± Triangle, ± Ramp, ± Pulse
- Voltage Controlled Frequency 1000:1
- Linear and Logarithmic Sweepers
- 80 db Attenuation, 10 db Steps, 20 db Variable
- AM (External Input), 360° Phase Lock (Model 7056)
- Variable DC Offset, Gate and Trigger Modes
- 30 V P-P Open Circuit 15 V P-P Into 50 Ohms
- Ramp Hold, Variable Phase Start/Stop, Pulse and Burst Modes Featured on Some Models

7200 SERIES

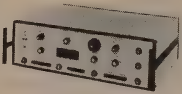
PRECISION 20 MHz FUNCTION GENERATORS
- 0.0001 Hz to 20 MHz Frequency Range
- Sine, Square, Triangle, Ramp, Pulse, ± Sine, ± Square, ± Triangle, ± Ramp, ± Pulse
- Voltage Controlled Frequency 1000:1
- Linear and Logarithmic Sweepers
- 80 db Attenuation, 10 db Steps, 20 db Variable
- Variable DC Offset
- 30 V P-P Open Circuit 15 V P-P Into 50 Ohms (Except Model 7260)
- Gate and Triggered Mode, Triggered Sweep, Ramp Hold, Variable Phase Start/Stop, Pulse and Burst Modes Featured on Some Models

Frequency Synthesizers

800 SERIES

FREQUENCY SYNTHESIZERS
- 1 Hz to 20 MHz (.01 Hz Optional)
- 10 PPM Stability
- All Plug-in Card Construction
- Constant Dial Resolution Over Extremely Broad Band
- Optional BCD or ASCII Frequency Programming (Amplitude Programming 802 Only)
- 0 dbm to +13 dbm (801) and −69.99 dbm to +26.99 dbm (802) Into 50 Ohms
- 0.05 dbm Amplitude Accuracy (Leveled Output — 802)

Digitally Synthesized Generators



330 SERIES

DIGITALLY SYNTHESIZED WAVEFORM GENERATORS
- 336 Materials Testing Generator
  0.000001 Hz to 1 KHz, Dual Rate Ramp
  Select: First Rate, Break Point, Hold Time, Second Rate
- 337 Digital Variable Phase Generator
  0.00001 Hz to 50 KHz
  0.2° Phase Lead Setability from 0.0° to 359.8°
- Gate and Trigger Modes
- 20 V P-P Open Circuit 10 V P-P Into 50Ω

Programmable Generators

600 SERIES

PROGRAMMABLE FUNCTION GENERATORS
- 0.001 Hz to 1 MHz
- Front Panel or Remote Programming
- Sine, Square, Triangle, Ramp, Pulse
- 1 mV P-P to 9.99 V P-P Into 50 Ohms
- BCD Programming Standard
- 0.5 mSec Programming Time
- Voltage Controlled Frequency 1000:1
- 1.66 MHz and 15.99 V P-P (Remote Only)

Waveform Synthesizers

200 SERIES

COMPLEX WAVEFORM SYNTHESIZERS
- Plug-in Programmer (40 Knob or Screwdriver Adjustment)
- Digital and Analog Waveforms
- 40 Increments — Fixed or Selectable
- 1 μSec to 1 Sec per Increment
- Variable Width and Variable Slope
- 20 V P-P Open Circuit, 10 V P-P Into 50 Ohms
- 60 db Attenuation, 20 db Steps, 20 db Variable
- Variable DC Offset, Gate and Trigger Modes

DMM
Price/Performance Leaders

Data Precision offers from a single source a complete line of 3-1/2, 4-1/2, and 5-1/2 digit multimeters. An instrument for every job — in the lab, in the plant or in the field. Data Precision offers you a complete choice from a wide line of instruments that have set the price/performance standards in the industry for years.

Model 3500
5-1/2 Digit
$995.00

Including:

- Autoranging Throughout
- BCD Output
- Remote Range & Trigger
- Triphasic™ Auto Zero
- 20% Overrange
- DCV, 1μv to 1000 volts
- ACV, 1μv to 700 volts
- Resistance, 1mΩ to 12MΩ
- Ratio
- 1/2 inch Planar Display
- Isopolar™ High Stability Reference
- Ratiohmic™ Resistance Method, 2 and 4 wire
- 1,000 MΩ Input Impedance through 10 VDC

Model 1450
4-1/2 Digit
$325.00

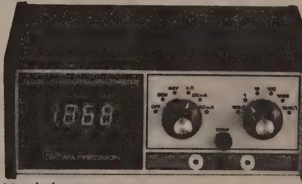
Big, Bright 1/2 inch planar display. 5 Functions — 21 Ranges — 100% overrange. 6 month DC accuracy of ±0.02% of Reading, ±0.01% f.s.

One year warranty, Certificate of Conformance, Test Documentation, instruction manual and probes provided with all instruments.

Model 2440
4-1/2 Digit
$675.00

By far the most, accurate autoranging *full* function 4½ digit multimeter available. It has DCV accuracy of ±0.007% rdg. ±1 LSD/6 months, autoranging and autozeroing, remote ranging and triggering and isolated BCD output, all included in one basic price. Full function, includes Ratio, 4 wire ohms, and 100 KHz AC frequency response.

Model 134
3-1/2 Digit
$199.00 with isolation and standard probes
$189.00 with standard probe



Model 134 measures DC and AC volts, DC and AC current and resistance through a total of 22 range scales. Basic accuracy of ±0.2% reading ±0.2% f.s. with auto-polarity, auto-decimal positioning and 100% overrange.

PORTABLE POCKET-SIZE MULTIMETER

$295.00
COMPLETE

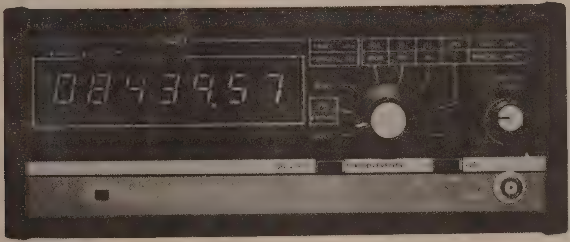
PERFORMANCE: .005% RESOLUTION, .05% BASIC ACCURACY FOR 6 MONTHS, MEASURES DCV, ACV, DC AND AC CURRENT, AND RESISTANCE WITH 100% OVERRANGING.

DC Volts, 1 volt to 1000 volts full scale, 100 μV resolution.
AC Volts, 1 volt to 500 volts RMS full scale, 100 μV resolution, 30HZ-50kHZ.
DC Current, 1 ma to 1A f.s., 1 μA resolution.
AC Current, 1 ma to 1A f.s., 1 μA resolution, 30 HZ-50kHZ.
Resistance, 1 KΩ-10MΩ full scale, 100 milliohms resolution.
Calibration guaranteed 6 months minimum.

PRICE: $295 COMPLETE
Includes rechargeable battery module, line cord/recharger, fused input probes, carrying case and strap, complete software and test documentation, full Data Precision calibration Instruction Manual and separate Operator's Manual, and one year warranty.

USABILITY: IDEAL FOR LAB, PRODUCTION OR FIELD USE.
Truly portable, pocket size 1¾" × 3½" × 5½" packaged in a rugged impact resistant case, rechargeable 6 hour battery for in-spec operation.

MULTIFUNCTION COUNTER



Measures: Frequency, Period, Period Average, Total Events, Elapsed Time.

Designed to compete directly with counter/timers costing 2 to 3 times more, Model 5740 makes absolutely no compromises in the area of performance.

Every element — every component — has been "value-optimized" to keep its exceptional range, sensitivity, accuracy and resolution within your budget.

It's a remarkable instrument, made more remarkable by its price. $295.00

MODEL 5740

7 DIGITS, 100 MHz, MULTIFUNCTION COUNTER

$295.00

SPECIFICATIONS: Sinewaves, Square Waves, Pulses, Pulse Pairs, Complex Waves

- Frequency
  5 Hz to 100 MHz; 10 ms/100 ms/1 sec. /10 sec. gate times, resolution to 0.1 Hz
- Period
  ½ microsecond to 0.2 sec.
- Period Average
  10, 100 and 1000 periods
- Total Events
  0 to 9,999,999 (unlimited with "overflow" indicator)
- Elapsed Time
  0 to 99,999.99 sec (27.8 hrs.)

FEATURES:
- Sensitivity
  10 mV from 5 Hz to 20 MHz rising linearly to a high frequency sensitivity of 50 mV RMS at 100 MHz
- 100 MHz Bandwidth
- 250 Volts RMS input capability
- Low Component Count
- Wide Signal Tolerances
- Gate/Overflow Indicators
- Trigger Level Front Panel Adjustable
- x1 and x20 Attenuator

OPTIONS:
- Remote Start/Stop
- 50 ohm Input Termination
- External Clock Input
- BCD Interface and Logic Control

DIGITAL PANEL METERS

-1.999
DATEL
SYSTEMS, INC.

FEATURES

- 3 to 4¾ Digits
- 5VDC or AC Powered
- Bright Red LED Displays
- Differential Inputs
- Optical Isolation Option
- 3″W x 1.75″H x 2.25″D
- Internal or External Triggering

Datel's fast growing line of digital panel meters now includes AC line or 5 volt powered models with a wide variety of performance specifications, options, and prices. They are low cost, high quality devices with conservative design, computer grade components, and superior workmanship for a wide margin of safety resulting in reliable operation. These DPM's feature bright LED displays and are housed in a rugged, black lexan case.

They are simple to install and are complete, requiring only external connection of programming wires, signal input, and 5VDC power. Any parameter that can be converted into a voltage can be displayed, and decimal point location can be programmed externally so that input voltage scaling can be used. The meters can also be computer interfaced using the 12 line parallel BCD outputs. In addition, they have external digital outputs for Overrange, Polarity, Overflow, and End of Conversion (Busy). External inputs include Start Conversion, Lamp Test, and Decimal Point.
The modular construction used in these panel meters permits simple servicing should this be necessary. By removing the snap-on front bezel and 4 mounting screws the meter can slide out of its mounting case from the front panel of an instrument, saving opening the instrument case. This operation takes less than a minute. Once removed, trouble shooting can be accomplished through board substitution, and servicing can be completed within five minutes. The meter can be calibrated using Zero, Full Scale, and Balance adjustment potentiometers behind the front panel bezel. A number of useful options is available on several of the models including floating differential inputs with up to ±300 volts common mode voltage. This is achieved by floating the analog front end of the meter by means of optical isolation. With this option these meters become operationally equivalent to an analog panel meter in its ability to float to any voltage level.

DM-2115: New this year, the DM-2115 is the world's smallest AC-powered DPM using 100, 115 or 230VAC, 47 to 440 Hz. A portable version of the DM-2115 uses +5VDC at 400mA max.
DM-3000: This low cost 3 digit meter has a single ended input with unipolar operation reading 0 to +.999 volts. It has 100ppm/°C temperature stability and very fast warm up time.
DM-2100: This low cost 3½ digit model has differential inputs with up to 200 reading per second. Temperature stability is 50ppm/°C. Two bipolar voltage ranges are offered, ±199.9mV and ±1.999 volts.
DM-4000, DM-4300: These two high-resolution DPM's feature ratiometric operation, autozeroing and optional optoisolation. The DM-4000 even has large .43″H displays.
DM-2000AR: This auto ranging meter automatically switches itself over three input ranges to give a total measurement range of 106dB. Its conversion time is 33 milliseconds giving up to 30 readings per second. The standard model has a single ended input. An optical isolation option gives differential inputs with ±100V common mode range.

data technology

DIGITAL PANEL METERS

These digital panel meters (DPM's) are designed with quality, reliable components and assembled with the finest workmanship to provide accurate, stable performance for a wide variety of applications.

DATA TECHNOLOGY offers the greatest selection of DPM's to fit your exact applications requirements: 3, 3½, 4, 4½ digit; AC or DC powered; AC or DC inputs; single ended or differential inputs; ratiometric operation; BCD output; Beckman planar discharge or LED displays; external control features; auto-zero circuitry, etc.

In addition to these standard features, a variety of modifications; customized lenses and bezels, read rate modifications, special scaling, signal conditioning adapter plates, and special internal components are available.

Digital DC Line Monitor
Model 1301-04 (3½ + digits/3000 counts)

The 1301 is the first low-cost, off-the-shelf digital line monitor with 100mV resolution. It can be calibrated for any frequency and voltage within its range with greater repeatability than traditional designs. The 3,000 count model 1301-04 will measure line voltages directly. BCD drive for five TTL load is standard and can be used for driving alerting devices when overvoltage or undervoltage conditions are detected.

Model 3362 - 6000 count DPM with Ratio option

The 3362 is a ±6000 count DPM that provides 4-digit resolution for 60% of the range. It offers great versatility, with (±0.1 % rdg. + 0.04% FS) accuracy for 90 days.

Analog features: an optional ratio measurement capability. The Unislope^{tm} converter assures significant noise rejection with a 6dB-per-octave input filter and 100dB of common mode rejection at 60Hz. Low input bias current (7nA max at 23°C) prevents excessive offset errors.

Digital features: BCD data (optional), read on command/hold on command and display and polarity inhibits. All digital lines are TTL compatible. Any decimal point may be illuminated with a ground to the corresponding input.

Conversion time is 24 msecs max. The internally controlled repetitive read rate, factory set at about four readings/sec, may be increased up to 8 readings/sec via an external shunt resistor.

Low cost DPM
Model 3312 (3½ digits)

These new DPMs give you the most readable readout up front, but far fewer parts in back. Exclusive Unislope^{tm} circuitry reduces parts by 30% giving you a cooler, tougher, more reliable DPM. And, you get BCD drive for five TTL loads at no extra cost.

Compare these specs: Common mode rejection of 80dB (with no filtering) at 50-60 Hz with 1k in series. Accuracy is ±0.1% of reading, ±1 digit. Input resistance is 1000mΩ for 200mV and 2V ranges. Model 3312 withstands 200V pk-pk at any range.

High accuracy high resolution DPM
Model 4312 (3½ digits)
Model 4412 (4½ digits)

100 pico amp input bias current, 1000 megohm input impedance and 250 volt minimum input protection, built-in transformer power supply with extra high voltage line transient suppression, a wide operating temperature range and the new wide angle, easy to read displays are a few of the features of these panel instruments.

Complete digital input and output signals are standard. "print," "hold" overrange, overvoltage and polarity signals are all DTL and TTL compatible for easy interfacing with most system applications.

The "auto-zero" input amplifier on the model 4412 and the special "sync" circuits that lock the dual slope integration A-to-D converter to the line frequency both contribute to the improved noise immunity and overall accuracy.

DC Powered 3½ digit DPM
Model 5312

The most accurate 3½ digit DPM available today. Differential input, LED readout, LSI design, and tool free installation are all standard features of the 5312. Optional ratio operation and/or buffered BCD outputs are available. The 5312 is also available with AC for those applications where line operation is necessary. Specifications include 1.5nA bias current, 1nA offset current, common mode rejection to 80db with 1 K source unbalance, and 2.5 watts power drain.

DC Powered 4½ digit DPM
Model 5412

Accuracy: 0.1% R; 20,000 count DPM. Available with either +5VDC or 100, 115 or 230Vac power. LSI analog chip provides highest accuracy, lowest cost state-of-the-art design. Ratiometric operation and buffered BCD output optionally available.

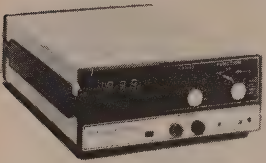
data technology

3½ DIGITAL MULTIMETERS

All 3½ digit Digital Multimeters by Data Technology offer extra benefits to their owners. Each model has special features which make it unique. All are versatile, low cost, rugged, quality engineered instruments designed to fit your measurement requirements. All use standard parts for ease of replacement; and most feature the high- impact plastic case that can be disassembled in five seconds for calibration / service.



MODEL 20 DMM with CAPACITANCE $199.00

A 3½ DMM for bench applications. Measures
DC VOLTS: 1mV – 1000V; AC VOLTS: 1mV – 200V;
OHMS: 1Ω – megΩ; CAPACITANCE: 2pF – 2µF.

MODEL 30 MOST ACCURATE 3½ DMM $299.00

5000 counts (400% overrange) means better accuracy, more resolution than any other 3½ DMM. Battery option can be added at any time.
DC VOLTS: 100µV – 1000V; AC VOLTS: 100µV – 1000V;
OHMS: 100mΩ – 50megΩ; DC CURRENT: 100nA – 3A;
AC CURRENT: 100nA – 3A.

MODEL 31 TRUE RMS 6000-COUNTS $375.00

All the above features of the Model 30 plus true RMS measurement of AC VOLTS and CURRENT over the frequency range of 25Hz – 20KHz.

MODEL 21
HANDHELD DMM $229.00

A battery powered small size DMM with versatility.
DC VOLTS: 1mV – 1000V;
AC VOLTS: 1mV – 800V;
OHMS: 1Ω – 2megΩ;
CAPACITANCE: 2pF – 2µF.

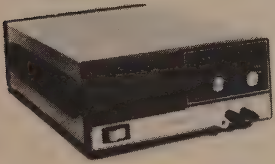
Data Technology's family of 4½ digit Digital Multimeters offer the highest performance at the lowest cost available. Yet each instrument has features which make it unique for specific applications. The Model 40 is designed as a general purpose bench multimeter; the Model 41 provides full multimeter capabilities plus BCD output for systems applications; and the Model 45 will operate from either internal batteries or AC line power for portable field requirements. All feature high resolution and accuracies, use standard parts, and utilizes Data Technology's unique case design. The instruments can be disassembled in five seconds for calibration/repair, but still provide the protection necessary for even the most rugged environment.

MODEL 40 **Lowest Cost, High Performance** **$399.00**

High resolution bench instrument, 100% overrange, high input impedance, 14 ranges.
DC VOLTS: 10µV – 1200V; AC VOLTS: 10µV – 1000V; OHMS: 100mΩ – 20MΩ ; DC CURRENT: 10nA – 2A; AC CURRENT: 10nA – 1A.



MODEL 41 **Most Versatile Systems Instrument** **$595.00**

BCD output, 25 ranges, high accuracy, bright .5" display, 150 msec conversion time.
DC VOLTS: 10µV – 1200V; AC VOLTS: 10µV – 1000V; OHMS: 100mΩ – 20MΩ ; DC CURRENT: 10nA – 2A; AC CURRENT: 10nA – 1A.

MODEL 45
General Purpose, High Accuracy DMM
$499.00

Compact, portable instrument, AC or optional battery power, 26 ranges of measurement.
DC Volts: 10µV–1200V;
AC Volts: 10µV–1000V;
OHMS: 10mΩ–10megΩ;
DC Current: 10nA–1A;
AC Current: 10nA–1A.

ENGINEERING LABORATORIES INCORPORATED

SOUTH PLAINFIELD, NEW JERSEY 07080 • TEL: (201) 755-7080 • TWX: 710-997-9553

SERIES 305

SUPER PERFORMANCE PHASEMETERS AND GAIN/PHASEMETERS*

305 Series Phasemeters provide the highest available accuracy, along with many operational features. Designed for the calibration laboratory, the design engineer's bench, the production line and automatic test systems, the 305 is the most widely accepted phasemeter in industrial, and governmental organizations.

FEATURES

- No hands 86 dB dynamic range
- Automatic or programmable operation and calibration
- Highest accuracy — to 0.03°
- Repeatability better than 0.01°
- Rejects harmonics and noise
- Wide frequency range — 1 Hz to 11 MHz

FLEXIBILITY THROUGH PLUG-IN CONCEPT

The plug-in concept of the 305 offers a wide selection of characteristics. Three standard mainframes and nine plug-ins are complemented by a variety of options, such as programmability, high speed and auto-calibration. Special modifications are also available. In addition, modular construction throughout provides maintainability at both component and P.C. card levels for ease and speed of servicing.

WIDE FREQUENCY RANGE

The basic mainframe provides a direct frequency coverage of 2 Hz to 700 kHz with high accuracy. By the use of frequency converting plug-ins such as the 305-PA-3005, standard units can handle frequencies up to 11 MHz. Special units can be provided for higher frequency.

NO HANDS OPERATION

The Series 305 Phasemeters require no controls or adjustments by the operator. These units are also equipped with several significant automatic features. These include automatic selection of angle range, automatic sensing of leading or lagging angle, automatic selection of the output time constants, and automatic setting of AC gains.

HIGHEST ACCURACY

Accuracy to better than ±0.03° is attained with precision mainframes and carefully designed plug-ins. Mainframes exhibit precise zero crossing detection, angle-to-DC conversion linearity to approximately ±0.01° and outstanding DC stability. Plug-ins are designed for accurate conversion of sine wave (also square wave) inputs to square waves through carefully controlled amplifier circuitry, use of gain autoranging, and harmonic filters where necessary.

INSENSITIVITY TO INPUT LEVEL

Series 305 plug-ins are available with a guaranteed accuracy of better than ±0.05° even with independent input level variations of 60 dB. Typical accuracy can approach ±0.03° as shown on the following page.

NON-AMBIGUOUS ANGLE READINGS

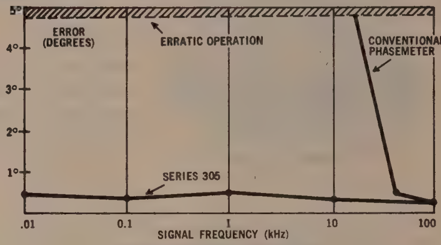
Two phase angle ranges in the 305 eliminate the ambiguity or "dead zone" error inherent in all other phasemeters (usually at 0°/360° or −180°/+180°). An automatic system switches to the 0°/360° range for angles near 180° and to the −180°/+180° range for angles near 0°. Unique guard bands prevent dead zones near switching points.

REPEATABILITY, STABILITY, AUTOCALIBRATE

Repeatability of the 305 is better than ±0.005°; temperature coefficient is ±0.001°/°C; and DC output drift is better than ±0.05° over any 30 day period. The autocalibrate feature eliminates virtually all DC errors in digital panel readout and BCD rear panel outputs.

NOISE IMMUNITY

Unique patented circuitry minimizes noise errors and makes possible accurate phase measurements under noise levels where other phasemeters become completely useless. The accompanying curve compares the phase error of the model 305 with that of a conventional phasemeter with broad band noise in both channels.



PHASE READING ERROR VS SIGNAL FREQ.
FOR GAUSSIAN NOISE (FLAT TO 5 MHz)
IN BOTH CHANNELS FOR S/N = 10

PROGRAMMABLE OPERATION

Standard mainframes are provided with rear connections for over-riding the automatic time constant and angle range selectors by relay contact closures. Options are provided for control by DTL and TTL logic.

DIGITAL READOUT

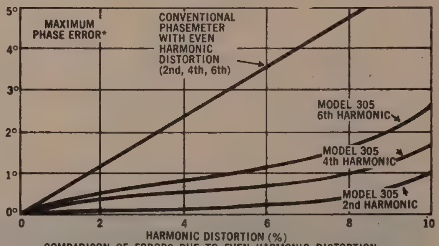
In addition to analog DC output, standard mainframes are available with up to 5 digit panel readouts (i.e., 0.00° to ±180.00° and 0.00° to +360.00°) and BCD outputs for each digit. Autocalibrate feature eliminates virtually all meter drift and scaling errors.

RAPID PHASE NULLING

For production testing of filters and other networks, an additional analog deviation-panel meter (305D) provides an easy means of adjusting a test angle to any accurate value. Presetting can be done in seconds without any other equipment. The precision digital panel meter monitors actual test angle continuously.

ABILITY TO REDUCE HARMONICS

The 305 is designed to reduce significantly the errors due to even harmonic distortion without the use of filters. The accompanying curve compares the error due to even harmonic distortion (maximized for worst case harmonic angle) on conventional phasemeters and on the model 305. (Odd harmonics in-phase with fundamental contribute no error.)



COMPARISON OF ERRORS DUE TO EVEN HARMONIC DISTORTION
(* For worst case phase relationship between harmonic and fundamental)

*Manufactured under U.S. Pat. No. 3,725,781

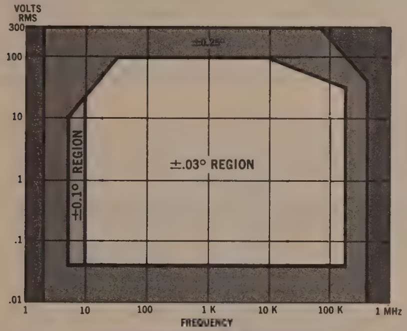
SERIES 305

HIGH PERFORMANCE PLUG-INS

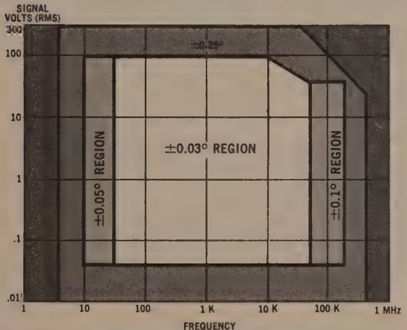
The variety of plug-ins available provides unlimited flexibility for the Series 305 Phasemeters in meeting many phase measurement problems. In addition to an expanding line of standard plug-ins, custom units can be designed for special needs.

305-PA-3001 AUTORANGING PLUG-IN

This plug-in features high accuracy over a broad range of input levels and frequencies. Autoranging of gain in each channel assures high accuracy (±0.05° guaranteed) over a dynamic range of 60 dB (50 mV to 50 V rms) for independent levels of inputs, with a useful range of 90 dB (10 mV to 300 V rms). This plug-in covers the range from 2 Hz to 700 kHz, with its highest accuracy in the 50 Hz to 50 kHz range. The curves shown illustrate typical accuracies as a function of level and frequency. The 305-PA-3001 also features compatibility with Textronix probes and includes front panel lamps to indicate when either input signal is below 50 mV or above 50 V rms.



TYPICAL ERROR CONTOURS FOR 305 w/305-PA-3001
FOR EQUAL SIGNAL INPUTS



TYPICAL ERROR CONTOURS FOR 305 w/305-PA-3001
FOR UNEQUAL INPUTS — REF. 0.3 VOLTS RMS

While the above accuracies apply to sine wave inputs, this instrument can also be used for square wave and amplitude modulated signals.

305-PA-3002 SINGLE RANGE PLUG-IN

The 305-PA-3002 is similar to the model 305-PA-3001 except that it does not include autoranging or limit indicator lamps. For sine wave inputs the standard unit is designed for guaranteed ±0.05° accuracy (typically ±0.03°) over independent signal levels of 50 mV to 500 mV rms, with a slight reduction in accuracy from 10 mV to 3 V rms. Other level ranges can be supplied on special order; Tektronix probes can be used for high input levels. This plug-in is useful for sine wave, square wave and amplitude modulated signals.

305-PA-3005 HIGH FREQUENCY PLUG-IN

This high frequency plug-in is designed for high accuracy to 11 MHz. Using a self tracking oscillator, the input signals are converted to 40 kHz for precision measurement by the mainframe. Input attenuators (50 ohms) are provided with 10 dB steps, to cover a range of 1 mV to 3 V rms in either channel. Front panel lamps indicate when input levels are out of range or when level controls are improperly set. The self tracking oscillator can be controlled by channel A signal or by a third independent signal.

305-PA-3007 PROGRAMMABLE AND AUTORANGING PLUG-IN

This programmable plug-in features all of the characteristics of the model 305-PA-3001. In addition it includes increased input gain to achieve operation down to 1 mV rms. The unit can be operated either in an automatic or programmable mode. Without rear connections, the plug-in operates automatically as a 305-PA-3001; however, by utilizing rear connectors, the internal autoranging can be over-ridden and additional internal gain can also be inserted. Programming is available by DTL and TTL logic.

305-PA-3008 SINGLE FREQUENCY PLUG-IN

The 305-PA-3008 is a special purpose plug-in designed for precision calibration of 50 Hz, 60 Hz and 400 Hz power line equipment such as wattmeters, phase detectors and watt hour meters. This instrument can measure phase difference between two voltages, two currents or between a voltage and a current. The unit covers a voltage range of 25 V to 250 V rms and a current range of 0.1 to 5 A rms. The basic plug-in covers the frequency range of 50 Hz to 500 Hz. Plug-in filters, available for 50 Hz, 60 Hz and 400 Hz, assure reduction of second harmonic by at least 40 dB and higher harmonics by at least 50 dB. A front panel zero control provides adjustment for high accuracy (±0.1°) at any single frequency.

305-PA-3009 WIDE BAND NETWORK ANALYZER PLUG-IN (GAIN/PHASE/AMPLITUDE)

This plug-in measures the voltage amplitude of each signal input (in volts or dBV, selectable by operator), the phase difference between inputs, and the amplitude ratio of inputs. Featuring auto-ranging of gain in both channels, it requires no manual setting of gains for any measurement. Simultaneous DC outputs on mainframe are proportional to all four fuctions. A front panel switch selects the measuring mode for digital panel readout — channel A voltage, channel B voltage, phase difference, or amplitude ratio. Lamps on the front panel of the plug-in indicate the proper decade multiplier. The 305-PA-3009A is designed for extending the low frequency range.

305-PA-3010 SPECIAL PURPOSE PLUG-IN

This plug-in is typical of special purpose plug-ins which can be supplied to meet unique problems. Having high input impedance, it is equipped with closely matched low pass filters to pass 125 Hz signals while rejecting 400 Hz signals, solving problems in many types of servo control systems. Similar units can be readily designed for other special voltage and frequency applications.

305-PA-3015 PROGRAMMABLE PLUG-IN

Intended for use in automatic test systems, this plug-in has two selectable filters for harmonic rejection and selectable gains to handle inputs from 50 mV to 50 V rms. Filter (or filter out) selection as well as gain switching is accomplished by contact closures across terminals on the rear of the main frame.

PRECISION TRANSFORMER ISOLATION NETWORKS

Dranetz TR 3100 series networks are available for input voltage isolation with minimum phase error and flat gain response. For use with balanced or signal ended sources, these units are equipped with internal preamplifiers to produce outputs in the 30 mV to 3 V rms range (for use with 305 Series Phasemeters) for input levels from 50 mV to 500 V rms. These transformer units are packaged for direct plug-in into the input BNC's of the phasemeter, and draw B+ power from the front panel accessory connector of the phasemeter plug-in. Size: 2¾" x 2¾" x 2". Input: banana jack. Output: BNC.

Model TR___	Zin	Com. Mode Rej: >60 dB for frequency	Range for ±0.1° typical shift	Range for ±0.3° typical shift	Gain ±2%
3101	1 megΩ 70 pF	Below 1 kHz	20-400 V rms 50 Hz-20 kHz	5-400 V rms 10 Hz-25 kHz	x 0.01
3102	100 kΩ 70 pF	Below 10 kHz	2-40 V rms 50 Hz-20 kHz	0.5-40 V rms 10 Hz-25 kHz	x 0.1
3103	10 kΩ 70 pF	Below 25 kHz	0.2-4 V rms 50 Hz-20 kHz	0.05-4 V rms 10 Hz-25 kHz	x 1.0

SERIES 305
HIGH PERFORMANCE PHASEMETERS

MAINFRAME SPECIFICATIONS

Frequency Range: 2 Hz to 11 MHz (see plug-in data)

Angle Ranges: 0.00° to ±180.00° or 0.00° to +360.00° manually or automatically selected. End-of-range measurement errors are prevented by 15° automatic guard zones.

Analog Output

Range: −1.8000 to +3.6000 Vdc corresponding to measured angle; 10.0 mVdc per degree

Accuracy: See plug-in specifications

Output Impedance: 100 ohms

DC Resolution: Infinite

Linearity: Approx. ±0.01°

Repeatability: Better than ±0.005°

Time Constants: Automatically selected; 10 ms for frequency >5 kHz, 50 ms >500 Hz, 350 ms >50 Hz, 700 ms >2 Hz (Note: 4.6 time constants to respond to better than 99% of step change).

Warm-up Drift: Approx. 0.05° after first minute.

Long Term Drift: Typically less than ±0.05° per month

Temp. Coefficient: Approx. ±0.001°/°C

Recommended Output Devices: Recorders, DVM's, A-D Converters, Printers

Self Check: Front panel switches; dc outputs correspond to −180.00°, 0.00°, +180.00° and +360.00°

Error Rejection: False triggers due to high frequency noise are locked out for signal to noise ratios better than 10:1. Errors and fluctuations due to waveform dissymmetry or low frequency noise reduced by at least 10 to 1.

Harmonic Rejection: Worst case errors due to even harmonic distortion reduced by approximately 5:1 without filters. Odd harmonics in-phase with fundamental contribute no error.

Operator Adjustments: None.

Operating Temp. Range: 0° to +50°C

Grounding: Independent grounds for signal, chassis, and power line. (For safety, chassis and power line grounds connected at factory.)

Remote Programmability (standard on all mainframes): By rear connector pins. Over-ride by contact closure of automatic time constant selection and angle range. Factory installed wiring from rear connector to plug-in for use with programmable plug-ins.

Modular Construction: Circuits on removable plug-in cards, extenders supplied for ease in servicing.

Size: 3½" high, 16" deep, 19" rack/portable package.

Weight: 20 lbs; shipping 30 lbs.

Power: 115/230 V, 50-400 Hz, <0.75 A (specify voltage and frequency when ordering).

Plug-In Accommodation: Accepts 305-PA-(   ) plug-ins. Mainframes and plug-ins are interchangeable.

ANGLE PRESENTATION

	Model 305	Model 305B	Model 305C	Model 305D
DIGITAL				
Display	None	4 digit plus sign	5 digit plus sign	
Angle Ranges	Not Applicable	0.0° to ±180.0° and 0.0° to +360.0°	0.00° to ±180.00° and 0.00° to +360.00°	
Resolution	NA	0.1°	0.01°	
BCD Output	None	BCD coded (1248), 4 lines per digit plus polarity line; TTL/DTL compatible (<0.8 V to > +2.4 V dc). Read and hold on command, and data ready features available on rear connector.		
Warm-up Time	NA	30 minutes (1 minute with option 107)		
Zero & FS Controls	NA	Front panel for FS & 0 (no adjustments with option 107)		
ANALOG				
DC Output	10.0 mV/°; 0.0000 V to 3.6000 V and −1.8000 V to +1.8000 V corresponding to 0.00° to 360.00° and −180.00° to +180.00°; infinite resolution.			
DC Offset	None			Continuously adjustable angle offset. Analog panel meter and DC output indicate deviation from offset.

OPTIONS

#101 Rear connectors for signal and reference inputs, BNC(4)

#102 Full mainframe programmability; includes self check, angle range and time constant selection, DTL and TTL compatible.
